

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

### Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

GENTLEMEN,

I FEEL it a high honour to be permitted to dedicate this Work to you, who, by your distinguished talents as Authors, and your unparalleled exertions as Publishers, stand pre-eminent in promoting the intellectual and moral improvement of all classes of society, particularly of the Working Class, on whose mental culture so much of our national prosperity depends. In the arduous undertaking which I have now completed, however imperfectly the task may be performed, I have had the same object in view as that to which your labours in the field of Literature and Science have been so long, so nobly, and so successfully directed. It is, therefore, with no small gratification that I am thus enabled to subscribe myself,

GENTLEMEN,

Your very obliged and humble Servant,

JOHN CRAIG.

the present century, a Dictionary, giving the pronunciation and etymology of words, with concise definitions, was imperatively required. In the attempt to supply this long acknowledged desideratum in our lexicographical literature, it is to me a source of no small gratification that my labours have received the high commendations of a most respectable portion of the British press, the patronage of her Majesty, and that of a most extensive and respectable circle of subscribers.

It appears not a little surprising, that no Dictionary of the English Language, at once etymological, technical, and pronouncing, had appeared previous to the publication of this work, with the exception of that of Dr. Webster; and much though that distinguished lexicographer has achieved in respect to the terms connected with the natural sciences, he has left much undone, and what he has performed is often far from being satisfactory; besides, his mode of indicating the pronunciation of words wants that simplicity which is essential to usefulness, and the pronunciation itself is frequently at variance with that current in the politer circles of British society. As a slight specimen of the want of simplicity in his method, the following words may suffice:—Salaried, precocious, propitiatory; pronounced thus—sal'a-ri-ed, pre-co'cious, pro-pi'tia-to-re;—words which, according to the plan I have adopted, are thus expressed—sal'a-rid, pre-ko'shus, pro-pish'a-tur-e. Nor are the faults of the American Dictionary limited to the mode of noting the pronunciation of words, or to its many innovations in spelling them. The Author contends, for instance, that the long sound of *u*, as heard in *duke*, *muse*, *union*, is not different from that of *u* in *rule*, *brute*, *truth*; in which case, we must either pronounce the former *dook*, *mooze*, *oonyun*, or the latter, *ryool*, *bryoot*, *tryooth*. But, faulty though Dr. Webster's Dictionary in this respect may be, that work is much superior to any of the kind in point of etymology; and if, in as far as the derivation of ordinary terms is concerned, my Dictionary is considered as worthy of approbation, much of the merit is due to the elaborate researches of that distinguished philologist.

added to our scientific vocabularies, in consequence of new discoveries or improved systems of classification; the work will, therefore, be carefully revised, and new authorities consulted, and such terms, as soon as time will permit, be given in the form of an Appendix.

The following passage from Dr. Johnson's Preface to his Dictionary is so descriptive of what I have experienced during the progress of my labours, and so eloquent in its diction, that I hope no courteous reader can object to its insertion in this place :—

“Many terms appropriated to particular occupations, though necessary and significant, are undoubtedly omitted, and of the words most studiously considered and exemplified, many senses have escaped observation.

“Yet these failures, however frequent, may admit of extenuation and apology. To have attempted much is always laudable, even where the enterprise is above the strength that undertakes it. To rest below his own aim is incident to every one whose fancy is active, and whose views are comprehensive; nor is any man satisfied with himself, because he has done much, but because he conceives but little. When first I engaged in this work, I resolved to leave neither words nor things unexamined, and pleased myself with a prospect of the hours which I should revel away in feasts of literature—with the obscure recesses of northern learning which I should enter and ransack—the treasures with which I expected every search into those neglected mines to reward my labour—and the triumph with which I should display my acquisitions to mankind. When I had thus inquired into the origin of words, I resolved to show, likewise, my attention to things—to pierce deep into every science—to inquire into the nature of every substance of which I inserted the name—to limit every idea by a definition strictly logical—and to exhibit every production of art and nature in an accurate description—that my book might be in place of all other dictionaries, whether appellative or technical. But these were the dreams of a poet, doomed at last to wake a lexicographer. I soon found that it was too late to look for instruments when the work called for execution; and whatever abilities I had brought to the task, with these I must finally perform it. To deliberate where I was ignorant, would have protracted the undertaking without end, and, perhaps, without much improvement; for I did not find, by my first experiment, that what I had not of my own was easily obtained. I saw that one inquiry only gave occasion to another; that both referred to books; that to search was not always to find, and to find was not always to be informed; and that to pursue perfection was, like the first inhabitants of Arcadia, to chase the sun, which, when they had reached the hill where he seemed to rest, was still at the same distance from them.”

Dr. Johnson's work must ever be regarded as an astonishing effort of learning, industry, and talent; but from the great accession of words to our language during

## ESSAY ON LANGUAGE

---

FEW who have not considered the philosophical construction of language are aware of the various and complex nature of the machinery necessary to elucidate our thoughts and convey our ideas to each other. By the educated, the constitution of words and sentences is considered as a preliminary matter, requisite only for the training of the ignorant, and almost altogether unworthy of the far-searching and erudite scholar. By the uneducated, the study of words is also looked upon simply as the earthwork on which a line is to be laid for the transmission of intelligence, sometimes perhaps with lightning luminence it is true, but generally in the slow ordinary mode of colloquial intercourse, or of scholastic or academic instruction. If a thought pass across the mind, on the convenience or indispensability of this earthwork, it is too often obliterated by the pushing onslaught of the next succeeding set of impressions, and the mean position of words as the base of knowledge supplies a ready reason for omitting the consideration of them altogether. And yet, in their isolated and unconnected position, what a host of thoughts will not words conjure up—what boundless pictures of nature—what unlimited fields of conception—what vast imaginings of the past, the present, and the future, in all the mighty imagery of their experience and consequences, will not words force upon the mind; and then, when once connected, what endless trains of thought and argument do they not carry on—what principles will they not elucidate—what prudential considerations will they not evolve—what energy will they not express and induce; and, finally, what results will they not achieve in the great world of mental elaboration, and in that of practical exertion, for the benefit of mankind! Who does not feel that by the felicitous selection of words a master-mind is exhibited? who does not know that, by this forcible application of his ideas to the hearts of an audience, the efforts of an orator become powerful to enlighten the understandings and to constrain the wills of his fellow-men?

Words, therefore, as the foundation of language, are the instruments of all mental and moral power, and, apart from their position in an organized treatise, are fraught both with interest and instruction of the highest order, possess a power, eminent as it is peculiar and important, in the operations of the world; and the dry details, as they were deemed by many, of such men as Porson, South, Ganganelli, Rambouillet, Hook, Johnson, Webster, Heyne, and a host of others, have been powerful beyond expression in settling the notions of mankind, and facilitating that communication of ideas which, in this day of earnest pressure and railroad speed, is necessary to enable any man engaged in a high position, and in the discharge of great duties—be they literary, political, commercial, or social—to obtain the intelligent assistance and co-operation through which alone weighty and lofty responsibilities can be discharged. He is always considered the best man of business who can clearly convey the most meaning in the fewest words. Words disjoined, then, have their power, and happily our own language affords one of the most evident instances that could be adduced of it; for no one can turn over the pages of our most classical works without being struck with the power of their words, without any reference to the arguments or propositions in which they are contained, and which they are used to enforce. Were it further necessary to show this property, we need only put forward the words impressed on any well-executed map, or, perhaps more significantly, the list of terms contained in the subsequent pages of this Dictionary, to establish the principle here propounded.

Yet, whilst thus fully asserting that each word has its particular power, and that no word, except the particles, can be heard or seen without conjuring up the thing or the idea which it represents, we do not forget that it is only by the relation in which we find them placed—it is only by the intermixture of the particles among words which represent ideas or things, so as to show the action or influence of one of them upon the other—that we can get the representation of any course of mental operation, however brief: that representation, whether accomplished by written or spoken words, constitutes what we call *language*. Words, separately, do bring up ideas and things for the observation of the mental faculty—and sweet, and powerful, and terrible, and wonderful, are the associations which oftentimes a single word will raise—but still that word is not what we term *language*, until it shall have been put in juxtaposition with others; and it is according to the power or the elegance of the principal words selected to express the things spoken of, and the perspicuity with which the particles are arranged, to show the connection in which they stand towards each other, that we estimate the beauty, the power, and the value of the language used by any writer to develop his reasonings, exhibit his demonstrations, or depict his facts. If we examine those compositions which the

world has agreed to value as above all price, and which seem likely to last as long as the language in which they are written may be known, we shall find that they are not less distinguished for the rigid severity of application through which the terms employed have been chosen, and for the consummate skill with which the particles have been arranged to effect a full and powerful impression on the reader, than for the nobility, the loftiness, the vigour or beauty of the ideas—property solely of the genius that conceived them—which the language read was intended to convey.

To conceive clearly, is undoubtedly the first thing necessary to the proper use of words, and therefore to the proper construction of language, for without clearness of conception, there can be no perspicuity or force of expression. But even with this faculty in strong and healthy exercise, every one largely engaged in the business of the world, or frequently occupied in literary pursuits, and especially those intimate with several languages, will constantly entertain ideas which he will find it difficult if not impossible to express in his own particular dialect, and he will have to apply to some other tongue to get the precise word necessary to express that meaning perfectly which he wishes to convey. Such a word becomes embodied in his sentence. His plan is followed by one, by a hundred, by a thousand others. These words are diffused through the length and breadth of the land. The applicability of the term is admitted and appreciated by the learned, the well-informed, and lastly, by the great body of the people; it is slightly assimilated to the etymology of the language into which it is adopted, and, in the course of a generation or so, becomes as completely nationalized as any other term which that language ever contained. The process is repeated with a rapidity in proportion to the intellectual activity of the people by whom it is used, and it is remarkable how greatly the constitution of national mind often affects the mode in which the principle is evolved. In some languages you may observe the influence of combined national and political prejudice; in others, the influence of a combined national and intellectual prejudice; and in others, again, only the restriction of national prejudice alone, and the hinderance of an inartificial mode of adapting the terms of other countries to the characteristics of the language in which, and the genius of the people by whom, they are to be employed.

As an example of the effect of the first of these positions it may be cited, that the French language, though during the last century it has received many additions, has been modified less in its peculiar characteristic than has the tongue of any neighbouring nation. During nearly the whole of that period, France has been placed in an antagonistic position to the rest of Europe, and her institutions have perhaps been

less modified, with reference to their intrinsic peculiarities, than those of any other country. Republican, imperial, monarchical, or republican again, her men and her institutions have been intrinsically the same. There is nothing so abhorrent to the pride or the vanity of Frenchmen as the interference of neighbouring countries with their political or municipal establishments; and they have consequently adopted no systems of social usage which have not been forced upon them, and have incorporated few, if any, words in their language which are not traceable to the classical model of elegance which they have set up for themselves. Even the very terms which have been employed to designate the most modern inventions are founded upon this base. The number of German travellers in France is comparatively great, but an idiom on a German derivation of late acquirement is rare even in the provinces which border on the Rhine; and such as have been adopted have been so mystified as to render a discovery of their origin, a few years hence, a matter of extreme difficulty. The travellers from England there during the last thirty years have been numerous in the extreme, while the Anglican dwellers in the country have been numbered by hundreds of thousands, so that the whole land has been permeated by individuals of position, and occupying stations which were calculated to diffuse the appropriate epithets of the Anglo-Saxon language; and yet few traces, if any whatever, of the residence and occupancy of these parties can be discovered in the social usage or the vernacular or literary expressions of the people. The increase, in what are termed the polite circles, has been all from the classical type.

The vast body of the German people occupy so extensive an area, and are bound together by such a community of custom, and have inherited traditions unbroken through such a series of ages, that we might well expect such a consolidation of national character as would render it impervious, to any very great extent, to the irruption either of manner or expression from outward sources. Debarred, so materially by their inland position, from an intercourse with the other parts of the world, the inhabitants of Central Europe have exhibited for centuries a phase of manner so unchangeable, as to render them almost worthy of the praise ascribed to the wandering denizen of the desert, who witnesses in his tent and the encampment around him almost the same customs, and the same appearances, as those which were evident among the followers of Ishmael and Esau. But if, since the emergence of the Free Cities from their state of feudal dependence on the half-barbarous barons who ruled with a rod of iron the vast districts which stretch from the Dneiper to the Rhine, and from the Baltic to the Alps, the inhabitants of Germany have retained the picturesque externals which mark their dwellings, their cathedrals, and their castles, as well as their idiom and their habits, they have made a

wonderful advance in their intellectual status; and, during the last half century at least, there has been no language in the world except our own which has received so rich an addition to its nomenclature. But the additions have been almost singularly characteristic; and in the extension of their expressions might be read so purely a German operation as to give the means, without reference to any other source whatever, of writing the social as well as the intellectual history of Fatherland throughout its numerous tribes. The peculiar predilection for abstract speculation which was nurtured, as in the case of ancient Greece, by the wild mountain scenery and the extensive tracts of waste forest land, led naturally, as it always will do where the perceptive faculties are active, to the peopling of all the shades, the dells, and far secluded retreats, with beings of an imaginary order: and thence, by a natural transition, soon as the mind becomes disabused of its ignorance, to a right disbelief of the existence of such beings; yet, at the same time, also, to an active exercise of those portions of the mental organization by which they had been engendered. Thence the taste for metaphysical speculation which has filled Germany with abstractions, and almost doubled her language through the addition of compounded words and the invention of terms, the business of which is to express the twofold nature of those ideas which have reference both to body and mind, but chiefly to the latter. Yet, in all these additions, and in all the modifications of the original terms upon which these changes have been effected, there has almost invariably been a recognition of the original root, a constant adoption of the Teutonic dialect; or if there has been any deviation at all, it has only been by the infusion of Slavonic accent or verbal transformation, with a view to give greater force to the expression, and greater simplicity to the meaning of a word. Otherwise, the new German word is as German as the old one which it duplicates, and the additions to the national language, with a few insignificant exceptions, are derived from the national resources.

Of the additions which have been incorporated into the English language it may here be unnecessary to speak, as in the latter part of this introduction it will be requisite to investigate fully the necessity by which they were prompted, and the principle which has been employed in adapting them to our general usage. It may only suffice here to observe, that, from the possession of freer political institutions, and a more frequent intercourse with other parts of the world, as the national prejudice has been less and the opportunities greater, so the language has been enriched from a greater variety of sources; but still a similar radical basis has been observed in the adoption of the terms, and the distinctive features of the language preserved, showing that there is some peculiar principle involved in every language, which it may be well worth while to trace, in order to render the pages of this Dictionary

more interesting, if not more useful, for it will give the key to very much that will be found in their contents.

Whatever may have been the original language of mankind, it is but reasonable to suppose that it was based on something generally analogous and adapted to the constitution of human nature. Now the only supposition that squares with such analogy is, that the names of all the several substances in the world should be formed upon the way in which they strike or affect the bodily senses. Helvetius, the assumed name of one of those acute writers, who combined, before what we are now accustomed to term the first French Revolution, to direct the minds of a large portion of the best informed and most refined people among the several nations of Europe, assumed the theory that all men are born with an equal share of intellectual endowments, and that their difference of development is owing entirely to the variety of positions in which they are providentially placed, and to the course of education which they consequently undergo. In this he certainly laid open a great principle, although he failed in establishing that for which he contended, for he committed the oversight of taking into account the various corporeal energies with which human beings come into the world; and as the mind as well as the body is a constituted portion of human nature, it is natural to believe that the innate strength to appreciate, to reason, and to judge, must also be various in different individuals.

Locke, by a course of argument which has been rarely assailed, and which has never been overturned, has proved that there can be nothing like *innate* ideas; for though he allows that the somnolent infant may possess the instincts necessary for it to act in accordance with its natural protectors for the preservation of life, it displays no knowledge which is not derived from the impression made upon the mind through the inlet of the outward senses. If man, therefore, in the infantile state of the world, possessed any acquirement, it must, unless divinely bestowed, have been attained from his observation of the objects around him. That which was dazzling to the eyes he would naturally term bright: that which was dark, obscure, and difficult to perceive, he would find slow in its effect upon the optic nerves, and he would term it dismal or dull: that which was impenetrable and resisted the touch, he would find difficult to penetrate, and he would therefore term it hard: that which was on the contrary yielding to his touch, he would term soft. The blue sky above his head, and the green clothing of the earth beneath his feet, would give the nucleus of all the colourings of the objects of nature: the harmonious warblings of the birds, as they sung their matin songs of praise to the Great Creator of all things who brought them into existence, would awaken his sense of melody, and lay that foundation for the knowledge of sweet sounds, which

If man, therefore, in the infantile state of the world, possessed any acquirement, it must, unless divinely bestowed, have been attained from his observation of the objects around him. Israelites—and Hebrew, moreover, possesses all the qualifications necessary to constitute it in an eminent degree as the primal language. It is full, forcible, and comprehensive, yet simple in its structure—contains all the words especially necessary to convey spiritual and immaterial ideas—while every object of the visible creation has a term to express it, peculiarly significant of the object to which it is applied; and it may safely be said that, even at the present day, with all the artificial appliances of elaborate construction, there is no language on the face of the earth superior to it, if there be any equal in the nicety, delicacy, yet force and fervour, with which Hebrew words can express those ideas which, from their tenuous nature, it is most difficult to impart with clearness and effect to the conception of a hearer. To adduce no other example, we may cite the word which has been so admirably translated in our authorized version of the Scriptures, in the interview with which Elijah was honoured by Jehovah, as the “*still small voice*” in which the Deity made himself evident to the senses of the Prophet.

Further, it would be natural to expect that, although the language of the vast community, engaged in the building of the great tower which was to reach unto heaven, was confounded, so that there could be no readiness of communication among them, yet, in accordance with those behests by which mercy has been impressed on all the judgments of Providence, there was some basis on which the several dialects would be grounded; and so we may perceive how the roots which form the substructure of the Hebrew language are perceptible throughout all the Oriental tongues. The rules of natural analogy would continue to be held in all: the art of man, so far as it could compass, would still make the sounds which were intended to express the several objects of observation or feeling as they affect the senses, as far as they could be still used. Though imperfect in themselves, in proportion to the intellectual acuteness of the several tribes by whom they were employed, those sounds would still bear a strong resemblance to the exemplar set in the prototype from which they were formed; and hence we see a reason for that stamp of organization which is discovered in all the Asiatic and Arabian languages.

By the southern shores of the Mediterranean, on its western boundary, even at the present day—on the districts which stretch up to the Caspian Sea—and in the people which have overflowed and spread over from the north-eastern boundary of the Lebanon range of mountains—the same features are plainly discernible; and it is not until the inquirer extends his investigations into the remoter districts of Central Asia, that he finds anything like a new principle to pervade the language of the people. Throughout Greece, Thrace, Illyria, and Dacia, the evidences of a common origin of the words of the people become more and more strong as the vernacular is approached. There, as in our own country, the common people are, as

this first language was has long been matter of dispute, and many a laboured work of the philologists has been written to show the claims of the several tribes of the earth to the possession of this treasure. Of one thing, however, there can be no doubt, that to the east we must look for a true solution of the difficulty. In the east mankind were first planted; from the east they wandered to people the earth; in the east mankind first attained to all the relations of social life; and from the east the arts and sciences have all unquestionably emanated. If we refer to that best of all authenticated documents, the Sacred Records, we find that previous to the Flood there was but one language on the face of the whole earth. Clustered about the Euphrates, the Tigris, the Jordan, and the Red Sea, the family of man grew and prospered. The life there was no simple state of patriarchal existence, in which pastoral pursuits were alone followed. There the arts were cultivated beyond general supposition, and the basis of all those which now minister to the comfort of mankind was so fully carried out, that none necessary to the well-being of our state were, in their primary condition at least, wanting. To the east, therefore, we must look for the first development of language.

After the Flood, we read that "the whole earth was of one language and of one speech," and that, as the family and dependents of Noah began to multiply, they gradually spread from the acclivities of Ararat until they covered the plains of Shinar; and at length, holden with pride, through the plenty which for a series of years they had enjoyed, they consummated their presumption by attempting to scale heaven itself. Then came the signal judgment of the Great Being, whose power they had contemned and whose munificence they had insolently disregarded; and the miracle was wrought which, as long as the world shall last, will stand as a continual evidence of the power and the presence of the Almighty. Their language was confounded so that they could not understand one another. They all spake with diverse tongues. They were mingled in one great throng, amazed and confounded; but as the mighty confusion began to subside—as, after much searching, harass, and perplexity, those drew towards each other, who found that they could apprehend each other's meaning—tribes and communities would collect, until all those who used the same terms for the same things were assembled together, and departed to some place where they might live together, without the interruption of those who spoke a language different from their own.

The immediate descendants of Shem continued to dwell in the land of Shinar, and therefore it is reasonable to conclude that they retained the language which was originally spoken in that district; and the more so, as Abraham, the founder of the Jewish nation, was the direct descendant from Adam—Abraham, like Adam, conversed with Divinity—the words of inspiration were written in the language of the

are distinguished. But it would require the existence of written records to render these always permanent, and to prevent that lapsing into a common mode of expression, which, from a community of intercourse, would otherwise ensue. These written records have, however, consolidated the change which a providential dispensation had so remarkably begun.

As in the case of uttered language, so with respect to that which was written, much diversity of opinion has existed respecting its origin. The general impression is, that this kind of communication arose out of the expression of things by symbols or tokens which most represented the objects for which they were intended to stand; and many very plausible reasons have been alleged for the correctness of their hypothesis by the advocates of this theory. It was a natural mode of beginning. It was calculated most readily to strike the imaginations and recollections of those for whose instruction or information it was intended. It was most easy for the uninitiated. There was a comparative plainness and intelligibility about it. The symbols through which it acted were patent to the senses of all. But there was one grand difficulty about it; for, though it might represent natural objects, it could not convey anything of intellectual ideas. Concerning the former there could be no doubt, for all would understand that the figure of a bird was intended to represent a bird; but very few, even if any two, would agree what the intellectual idea was which a bird was intended to denote. The written language of symbols, therefore, although plain enough to those who understood it, would, in each individual case, require an interpreter to those who were unacquainted with the mental or metaphysical qualities of objects drawn upon the tablets; and the conclusion at which we are therefore compelled to arrive is, that this symbolical language was a mystery concocted for the benefit of a privileged class, in which none could participate without in some way belonging to the order from which it emanated; especially as the plan is not at all in accordance with the principle which we find to hold uniformly in the natural world. The behests of Providence here have always been made for the advantage of a common community. The light springs and the sun shines daily for the benefit of all mankind. "The rain falls alike on the just and on the unjust;" and it is not therefore to be supposed, that the great means of ministering to the knowledge and the happiness of the world at large, was to be confined merely to a small class of the great human family. Some means must, therefore, have been devised for communicating their ideas from one to another, other than that which would conduce to the welfare or superiority of only a small portion of the inhabitants of the world. We are therefore constrained to come to the assumption, that there was a means which, while it was simple in itself, would be easily avail-

they always will be, the grand depositary of olden superstition and of olden thought. If a student were seriously to set himself to work to look into the idioms and the construction of the simple terms used by the uneducated peasantry of the secluded districts of his native land, he would find that he both comprehended and was comprehended just in accordance with the rule that he observed, of only using the terms which he found most frequent in his Anglo-Saxon dictionary. To the polite ears of a metropolitan resident, or to the apprehension of the denizen of the two great conservatories of English learning, the rude, and too often uncouth, expressions of the unlettered peasant of Somersetshire, Cumberland, Yorkshire, or Devonshire, would, without this key, be perfectly unintelligible; with it, there is discovered a singular aptitude in the phraseology to the necessities and circumstances of rural life: and nowhere will there be found a more forcible delineation of the feelings which they have to exhibit, or the objects with which they have to deal, than that which we find commonly current in the language of the almost barbarous inhabitants of the isolated districts of Britain. Their dialects nevertheless are all various.

Just so was it among the dispersed and wandering people of Asia Minor. They retained the same force of expression, the same conformation of the terms which they used; but still they were separated, broken up into masses, each retaining the particular mode in which they suited their sounds to the peculiar positions in which they were placed; and each, as time advanced, becoming more and more adapted to those positions, and disagreeing more and more from each other, until at last they severally became settled in their peculiar languages—all, however, still retaining the original groundwork on which their utterance was based.

There was, it is true, an alteration, a change wrought in the dialects of those tribes which made their progress, and ultimately obtained their settlements, both in the extreme north and south of the early bounds of habitancy and civilization. In the former, the tinge of the scenery by which they were surrounded communicated its inflections to the words which they pronounced. So with the latter, though in a milder form, the same cause prevailed. In the former, the rigour of the seasons, the presence of snow, the impetuosity of the torrents, the ruggedness of the rocks, the violence of the storms, would infuse a hardness and roughness into the words which were necessary to describe their several positions, circumstances, sufferings, and the in-door enjoyments which solaced them for their fatigue, and rendered them fit to encounter new dangers and hardships on the morrow. Among the latter, the sunny skies, the deep blue of the ethereal azure, the wide outspread of the illimitable sands, the occasional rocks which threw the refreshing-shade under which they rested, the heat of the climate, the oases now and then met with, the quietude of their rests, would communicate that softened inflection by which all southern tongues

are distinguished. But it would require the existence of written records to render these always permanent, and to prevent that lapsing into a common mode of expression, which, from a community of intercourse, would otherwise ensue. These written records have, however, consolidated the change which a providential dispensation had so remarkably begun.

As in the case of uttered language, so with respect to that which was written, much diversity of opinion has existed respecting its origin. The general impression is, that this kind of communication arose out of the expression of things by symbols or tokens which most represented the objects for which they were intended to stand; and many very plausible reasons have been alleged for the correctness of their hypothesis by the advocates of this theory. It was a natural mode of beginning. It was calculated most readily to strike the imaginations and recollections of those for whose instruction or information it was intended. It was most easy for the uninitiated. There was a comparative plainness and intelligibility about it. The symbols through which it acted were patent to the senses of all. But there was one grand difficulty about it; for, though it might represent natural objects, it could not convey anything of intellectual ideas. Concerning the former there could be no doubt, for all would understand that the figure of a bird was intended to represent a bird; but very few, even if any two, would agree what the intellectual idea was which a bird was intended to denote. The written language of symbols, therefore, although plain enough to those who understood it, would, in each individual case, require an interpreter to those who were unacquainted with the mental or metaphysical qualities of objects drawn upon the tablets; and the conclusion at which we are therefore compelled to arrive is, that this symbolical language was a mystery concocted for the benefit of a privileged class, in which none could participate without in some way belonging to the order from which it emanated; especially as the plan is not at all in accordance with the principle which we find to hold uniformly in the natural world. The behests of Providence here have always been made for the advantage of a common community. The light springs and the sun shines daily for the benefit of all mankind. "The rain falls alike on the just and on the unjust;" and it is not therefore to be supposed, that the great means of ministering to the knowledge and the happiness of the world at large, was to be confined merely to a small class of the great human family. Some means must, therefore, have been devised for communicating their ideas from one to another, other than that which would conduce to the welfare or superiority of only a small portion of the inhabitants of the world. We are therefore constrained to come to the assumption, that there was a means which, while it was simple in itself, would be easily avail-

able by all mankind. Such a means was evidently presented in the system of *alphabetic* writing, which, though in appearance not immediately adapted to further directly the object for which it was designed, possesses a comprehensiveness of nature which rendered it fitted for all occasions, circumstances, and languages. If properly considered, it does in truth appear perhaps more difficult of apprehension at first, but more easy to understand at last—more difficult for the first learners, but more fresh to the larger class which was to follow them. The art of symbolical writing showed at once to those who understood it what was intended, but its meaning remained a secret to those who were unacquainted with the intentions of the original writers; while, on the contrary, alphabetic characters having been once settled on a decided basis, their value and import could easily be conveyed to a district or a nation. The matter written would then be easy of interpretation by all, and the difficulty would not rest in the apprehension of the simple ideas imparted by the symbols, which might mean a plain intimation of a fact, or impart a figurative meaning quite unattainable by those who were ignorant of the facts and circumstances out of which the figurative meaning arose, but would depend merely upon the abstruseness of the ideas which the written words were intended to convey.

Such a plan *is* in perfect accordance with the general course of Providence; and the presumption that it was the one adopted, is justified by the few but manifest declarations of Holy Writ. It might well be supposed that from the long lives of the heads of the first families of mankind, and from the traditions that would, by their agency, be easily handed down through the successive generations, that anything like a written language was unnecessary; but to that it may easily be answered, that, however much such traditions might be carried forward in the immediate households of the patriarchs, the necessity would still exist for communicating information to those collateral connections who branched off to original settlements, and who themselves became the founders of new families, from whom and to whom communications would have to be continually sent; and to support such a supposition, we find, in the earlier chapters of Genesis, that the antediluvians were acquainted with music, and with several other of the arts and sciences. Now, though music may be conveyed to a very great extent by tradition, as it has been through the scalds in Germany and the minstrels of ancient Britain, and afterwards by the professed troubadours, and other wandering songsters of the middle ages, yet it could never be so well done as by the words which most resembled the sounds of the notes, and by the signs or notes which afterwards became the symbols of those words. Nor is it irrational to suppose that the arts of life had attained to considerable perfection before the Flood, for the world at the time of its occurrence had existed for upwards of 1500 years; and it should be recollected that the descendants of Adam

sprung from one who came into existence, not with the weight of the curse which has been entailed upon all that followed him, but from one who, if he lost his original faculties in any degree, would at least retain the recollection of the glorious attributes with which he was once endowed. Neither is there any reason to believe that the inhabitants of the ancient world were deficient in any of the qualities which distinguish and are calculated to elevate the position of human nature; and it is hardly to be supposed that the wickedness which brought upon them so signal a destruction, was altogether of so debased and sensual a character as would be induced solely by an unlimited gratification of the animal appetites. If it were not then, may we rightly conceive that all the vices of luxury were included in the catalogue of their offences, and combined to insure their punishment. If so, then shall we be at no loss to believe that, among the mischiefs, some of the benefits, and those the first and chief—the written communication of ideas—was included in a highly advanced and artificial state of existence. Of one thing there is no doubt, that Noah stood in a very eminent position among his fellow-creatures at the time God sent his great judgment upon the earth; and though he, from all that we can ascertain, and from all that we can reasonably surmise, possessed no means of retaining the power of practising the arts of those who were overwhelmed, he yet would retain his own accomplishments, and among them, in all probability, the art of writing. That it was no new art in aftertimes, when from the progress of mankind the world again became peopled, is evident from what we read in the book of Exodus, where the Almighty commanded Moses to write the contents of the divinely given commandments on the two tables of stone. From the engagements of Abraham, too, and others, even before that period, we know that, during the whole of the centuries up to the time of Abraham's death, society existed as much in a pastoral state as it possibly could have done previous to the Flood. There is little doubt but that it was much more so, and yet the sciences had vastly progressed; for we cannot but conclude, from what we read of Joseph's position at the court of Pharaoh, that a refined organization of the kingdom of Egypt existed during his ministry, and that the rescripts of the governor of the land were transmitted not by symbolical but by written letters; for, though the former was exceedingly useful for formal inscriptions on public monuments, they would be a very unwieldy means of personal converse and official communication, though they might perhaps in some cases be adopted for that purpose.

The first positive intimation we find of writing in the Bible, is in the 17th chapter of Exodus, where God commanded Moses to write in a book an account of the defeat of Amalek, and said that he would utterly put out the remembrance of

Amalek from the face of the earth. This direction is not mentioned in any way as a new thing, and it may therefore be supposed that, as we have just supposed, the art of writing was no novelty at the time. We next read, in the 24th chapter, that "Moses wrote all the words of the Lord;" and further, in the 31st chapter, that when the Lord had made an end of communing with Moses on Mount Sinai, he gave unto him "two tables of testimony, written with the finger of God," of which a transcript was subsequently made. These last two tables remained in existence until Jerusalem was taken by the Babylonians, nearly a thousand years, so that there was a constant testimony of the fact during that period. The production of these two tables was nearly coeval with the isoteric and esoteric inscriptions upon the Egyptian monuments; so that, if the claim of antiquity be put in for the priority of symbolical writing, it is equally pertinent for that which was alphabetic.

Perhaps the most ancient specimens of alphabetic writing are to be found on certain relics of the first city of Babylon, which, according to the chronology of Archbishop Usher, whose calculations are generally taken as the standard of the Bible, was founded, about the year 2333 before our Saviour's first advent, by Belus, whom the best accredited authorities have identified with the Nimrod, the mighty hunter, of Moses; and the great tower which led to the dispersion of his subjects, and the confusion of their tongues, was begun, it is believed, about sixteen years after he attained to anything like the consolidation of a kingdom. Authors, in various ages, have ascribed the origin of letters to the Phœnicians; and if we may trust, as there seems to be no reason why we should not, the authority of Herodotus, Pliny, Plutarch, and others, Cadmus was a member of that nation who settled in Bœotia, where he built the city of Thebes, about fifteen hundred years before the Christian era. From the plains of Shinar, the transit to the sea-coast of the Mediterranean was a natural and easy progress. Around the spot of the capital of their district, the people clustered; and, as in all congregated communities the arts most flourish, and enterprise is most encouraged, the inhabitants soon became distinguished throughout the world for their diffusion of the arts which they themselves possessed, and for the carrying on of which they subsequently visited even so remote a spot as the *ultima thule* of the ancient world, the British Isles. The time ascribed to the existence of Cadmus is about contemporary with that of Moses, so that we have here a certain datum from which to trace the diffusion of written language throughout the world.

The memorials of the time when written records were first formed are comparatively few, and confined only to what chronologers have termed the "second age of the world," that which immediately followed the occurrence of the Deluge; but of this period the remains are sufficiently numerous to leave us in no doubt respecting the

object for which they were made. There appears to have been some instinctive design implanted by Providence for the perpetuating the acts and the discoveries of the class and race by whom they were left; nor is it difficult to ascertain the purpose for which this instinct was created. The benefit of posterity could produce no advantage for an existing race; but just as the records of the Jews were preserved by supernatural care, so were the annals of the nations of the people not included in the peculiar privilege of the Israelitish race, chronicled for the future benefit of mankind. The mode which was then taken was just the one which we now observe on all our public monuments—the impression of certain letters or signs on the permanent erections of the people, for the information of future ages. Brick-making and building were arts which seem soon to have been understood, and it is difficult to appreciate the art of writing or printing on the most ancient structures of the world, without believing that those arts were, if not divinely inspired, at least derived from those who existed previous to the grand manifestation of the Godhead by which the world was drowned. The earliest of these records are found on the bricks used for the erection of the ancient city of Babylon. On several of them we find a series of sentences which, when interpreted, denote an evident desire of benefiting the rising classes, and the accumulation of inscriptions has ever been a favourite object of mankind. The Great City, whose temples and whose towers were destined to become the great repositories of knowledge, was erected of clay bricks, on a vast number of which impressions were made by blocks precisely similar to those which were first used in the early progress of European printing; and the substance of which they were formed, was a composition of clay held together by a mixture of straw or reeds, which, after having been well manipulated, was fitted to receive the impressions of the blocks, which, according to "Maurice on the Ruins of Babylon," were pieces of wood with characters on the surface left in high relief, the intervening substance being cut away. The clay having been formed into the shape of bricks, much larger however than our own, and more resembling in form and appearance the fire-stones so well known among our modern builders, the stamp from these blocks was communicated to each, and the bricks were then thoroughly indurated by exposure to the sun or fire—commonly the former, but sometimes the latter; and in cases where the inscriptions, and the bricks on which they were made, were intended for important erections, no doubt to both: and to such an extent was this process carried, that the substance remaining to the present day will, upon being struck, ring like a piece of metal, and has all the appearance of vitrified flint.

Of this substance, termed by the Greeks *εξ οπτης πλίνθω*, the walls of Babylon the Great were chiefly formed. Travellers who have visited their ruins have given

us representations of several of these impressions, and so many are extant that not only can no doubt be entertained of their genuineness, but undeniable proof has been afforded that they were the production of the races of mankind who existed almost immediately posterior to the Flood. No relics of times anterior to their date have remained to us, for so completely in truth do the fountains of the great deep appear to have been broken up, that not a vestige of the dwellings or the arts of the antediluvian world has ever yet been discovered; and as there is no question as to the antiquity of these interesting monuments, it seems unreasonable to suppose that a generation new in the arts of life could ever have attained to so complete a system of writing as would enable them to convey, with a perfect intelligibility, the records of their own day to the future inhabitants of the earth, unless they had some traditional instruction in the art derived from their predecessors, before they were swept into eternity by the omnipotent fiat of the Almighty. That a *system* prevailed, indeed, is evident, for the characters are so numerous, that without it the generality of the inscriptions would have been totally unintelligible to those who would have afterwards to peruse them. The symbolical characters were interspersed in many cases with the *literal* inscriptions, and commonly appeared upon the same erections; but, generally speaking, they were separate, and seem intended rather to elucidate either a single transaction, or to have been placed simply for ornament, according to the whim or fancy of the owner or architect; and they are rather painted or enamelled than impressed or printed upon the bricks, and appear to hold a place subordinate in importance, in the estimation of the builders, to the indented characters of which mention has just been made.

Hagar, Chardin, Maurice, Le Brun, and other oriental writers, describe these inscriptions as made in vertical columns, divided by lines, the characters between the lines being evidently words composed of letters joined together, which, in their formation, bear a very close resemblance to the ancient Hebrew alphabet, and appear indeed, to an unprejudiced observer, to have been constructed on precisely the same principle as those letters. The characters are by the French termed "*caracteres à cloux*," or nail-headed; by others they are termed "arrow-headed;" and by others again, "javelin-headed;" and, in their united appearance, are not very dissimilar to the inscriptions on a modern Chinese tea-chest. Sir William Jones describes them "as regular variations and compositions of a right line, each line towards the top becoming of an angular figure." The foundation of these characters is of this shape; and all the letters, words, or syllables, whichever they may represent, are composed of this character joined in different ways, and placed in an almost indefinite variety of positions, sometimes with a plain stroke attached, but generally without. In 1801, Dr. Hagar was employed by the French govern-

did the Chinese deputies forward for their master's inspection a representation of the "devil-ship," as they termed it, the first steamer that was seen in the waters of China. Nor was it only in the simpler parts of language that this resemblance was observed. In the secondary ideas, which at the sight of natural objects the recollection of their qualities is apt to induce, as well as in the more recondite conceptions, the same resemblance, though varying in degree of force, is also observable.

Of all the expressions of symbolical origin, those of the Chinese language appear to be the most simple, and such as might naturally arise out of the most total and entire ignorance of written language. Their mode of writing is evidently, according to the best authorities, to describe a thing by its appearance, so that the drawing of a horse being presented to a reader, he immediately understood what the writer meant. But as their plan was to depict these figures without any relief in the lines, so that there would be the greater facility in modifying their forms as they became familiar to the people at large, they were evidently incapable of communicating secondary ideas without much combination of characters. There was, therefore, the advantage of taking a portion of each individual type, and combining it with some other, to express a secondary idea, which was represented partly by the most evident qualities of the animal or thing which the simple character implied. These signs have of course gradually increased as the people progressed, until from a symbolical, the Chinese has become altogether a written language, containing, according to Humboldt and other authorities, not less than eighty thousand words, all of primary signification, exclusive of those which are minor and only derivatives from them. To become acquainted with such a mass of characters, much less to retain them in the memory, appears a manifest impossibility. It is said that their most learned men know hardly one-third of the words in their own language, and to assist in the interpretation of them, a large class of elementary terms, called language "keys," 214 in number, have been selected. Without a knowledge of these, the language is in a great measure unintelligible to the best informed of the natives who speak it, and of course almost entirely to those whose life is condemned to poverty and labour.

Yet although having to such an extent put off the symbolical character to become a written language, the Chinese still retains the evidence of the source from which it emanated, and all the principles by which it has been modified; and it is remarkable, that identical ideas in China and in Egypt have been expressed by identical symbols. Kater, the Jesuit Missionary, who was for many years located in the Celestial Empire, states, in some letters to Sir W. Roughton, that the sun and moon joined together, in the Egyptian hieroglyphics, represented among that

a probate spheroid, about seven inches high, and three inches in diameter at each end, increasing in size towards the middle; in fact, very much in the form of a modern wine tun. The characters upon it are highly finished, but in other respects it is quite similar as to the impression upon it to the bricks, and is in all probability at least 4000 years old, and it may be considered a fair and beautiful specimen of the writing of those days, and, with the other specimens which have been discovered, affords authentic proofs of the existence of alphabetic language before that of symbols was ever carried into effect. The evidence is the more important, as the characters have the formation which afterwards prevailed in the Arabic and Hindoo languages; and seems indeed, the foundation of the written signs of all that great class of tongues which is spoken by those numerous nations of mankind who appear to have been destined, though the precursors, yet to be the inferiors of the races professing that faith which is only derived from Divine inspiration.

Whether the use of symbolical characters arose out of the decline of language and letters, or whether, during the existence of general ignorance among the people, it was adopted by their priests for the sake not only of securing to themselves a peculiar means of personal correspondence, with which the mass of mankind would be altogether unacquainted, but also of perpetuating their power through the continuance of superstition, has long been, and very possibly may long remain, a subject for disquisition. It is very probable that it arose out of both causes, being first adopted by the ignorant to express their ideas, and, being afterwards refined upon by the learned to serve their particular objects, was afterwards constituted into an esoteric system, to the full meaning of which the uninformed could never attain. Wherever, however, it came into a general use, it was evidently founded entirely upon physical perceptions, for we discover that in Mexico, China, and Egypt, in remote ages, the same principle prevailed.

According to Humboldt, whose genius was so peculiarly calculated to trace out the records of olden times, the monuments in the neighbourhood of Mexico are rich in the remains of the information conveyed to Montezuma by his officers, of the arrival on the coast and appearance of Cortez and his companions. The notices were given in a sort of ideographic writing, such as that which formed the basis of the Chinese language, and were made precisely in the same way as information was given the other day to the Emperor of China, of the appearance and progress of the British expedition in his dominions. The agents of Montezuma drew, as well as they were able, the figures of the ships, weapons, and warriors, through whose instrumentality his power was so shortly to be overthrown, just as

did the Chinese deputies forward for their master's inspection a representation of the "devil-ship," as they termed it, the first steamer that was seen in the waters of China. Nor was it only in the simpler parts of language that this resemblance was observed. In the secondary ideas, which at the sight of natural objects the recollection of their qualities is apt to induce, as well as in the more recondite conceptions, the same resemblance, though varying in degree of force, is also observable.

Of all the expressions of symbolical origin, those of the Chinese language appear to be the most simple, and such as might naturally arise out of the most total and entire ignorance of written language. Their mode of writing is evidently, according to the best authorities, to describe a thing by its appearance, so that the drawing of a horse being presented to a reader, he immediately understood what the writer meant. But as their plan was to depict these figures without any relief in the lines, so that there would be the greater facility in modifying their forms as they became familiar to the people at large, they were evidently incapable of communicating secondary ideas without much combination of characters. There was, therefore, the advantage of taking a portion of each individual type, and combining it with some other, to express a secondary idea, which was represented partly by the most evident qualities of the animal or thing which the simple character implied. These signs have of course gradually increased as the people progressed, until from a symbolical, the Chinese has become altogether a written language, containing, according to Humboldt and other authorities, not less than eighty thousand words, all of primary signification, exclusive of those which are minor and only derivatives from them. To become acquainted with such a mass of characters, much less to retain them in the memory, appears a manifest impossibility. It is said that their most learned men know hardly one-third of the words in their own language, and to assist in the interpretation of them, a large class of elementary terms, called language "keys," 214 in number, have been selected. Without a knowledge of these, the language is in a great measure unintelligible to the best informed of the natives who speak it, and of course almost entirely to those whose life is condemned to poverty and labour.

Yet although having to such an extent put off the symbolical character to become a written language, the Chinese still retains the evidence of the source from which it emanated, and all the principles by which it has been modified; and it is remarkable, that identical ideas in China and in Egypt have been expressed by identical symbols. Kater, the Jesuit Missionary, who was for many years located in the Celestial Empire, states, in some letters to Sir W. Roughton, that the sun and moon joined together, in the Egyptian hieroglyphics, represented among that

people the first principle of all things; and that a similar image bears a similar meaning in China, being taken also to indicate the succession of time and the revolutions of principles in nature, both physical and spiritual. The figure of *ten* is represented by the same symbols among both people, as also is the feeling of *contentment*. But the most remarkable instance of this similarity, with which we have yet become acquainted, is that which implies *education* and *ancient origin*. These, in Egypt, when conjoined, are represented singularly enough by a bundle of reeds. So curious and apparently far-fetched a symbol as this, would seem to intimate a singular and strange connection of ideas, to such an extent, indeed, that it would almost seem an impossibility for any two individuals, even in the same country, to have agreed upon it; and yet we find that the same idea is represented in China by the same symbol, and the reasons assigned for its adoption are sufficiently general to come within that class of notions on which the superstructure of a language would most likely be founded.

These circumstances, then, besides others which might be easily adduced, are quite sufficient to assure us that the symbolical languages constitute one of the great classes into which the several tongues of the races of mankind may be divided; for allowing the supposition, that language was originally attained through a direct inspiration of Divinity, or, to speak more properly, was one of the divine endowments with which man was invested at his creation—a supposition which we believe no one can successfully controvert—we have, in the history of the world, abundant proofs that its inhabitants, whether from geographical distribution, social usage, or political condition—the two latter influences of course depending, under Providence, to a very great extent upon the former—have become separated into great families, each having a mode of expression peculiar to itself, various in the dialects used by its several sections; all those dialects being still, however, evidently based on one common set of terms, sounds, or principles of expression.

It is easily demonstrable that, at the confusion of tongues at Babel, a great portion of the benefit of the divine endowment was lost. The immediate appreciation of a new object, a new thought, or a new feeling was restrained. Men, instead of being at once able to adjust the expression to the idea, differed in their estimates, and formed different notions of the means by which a knowledge of it ought to be conveyed. If such had not been the case, notwithstanding their disagreement and unintelligibility to each other, they would soon have fallen into a common language. But not only did not this occur, but the several families diverged more and more from a common apprehension of terms, until the difference became as decided as it is at the present day.

Mr. Maurice, in his disquisition on the Ruins of Babylon, before spoken of, after alluding to the inscriptions on the bricks, those of which we have already spoken as being the earliest impressions of conveyed ideas in the world, sums up his reasoning upon the probability of the art of alphabetic writing in the following terms:—"In this state of uncertainty, the mode of conduct for us to pursue, at once the most consistent with reason, the most conformable to true science, and the most agreeable to sound religion, is to conclude, that though some sort of characters formed by the ingenuity of man, or founded on the basis of the ancient hieroglyphic system, was occasionally used in the earlier ages of the world, that *so divine an art*—an art apparently so far surpassing human power to invent—as ALPHABETIC WRITING, in the perfection in which it has descended down to us from an Asiatic source, through the medium of the Greeks and Romans, *could have its origin in inspiration only*, and was at first revealed to man amid the awful promulgations at HOREB, amid the thunders that shook the basis of Mount Sinai."

Considering that he had himself transcribed the characters from the Chaldean bricks, it was a somewhat curious conclusion to arrive at, that writing was first promulgated on the delivery of the moral law to Moses. But it is at least a testimony powerful, both directly and inferential, of the antiquity of alphabetic writing from one who is allowed to have been a most able student of the subject. But whilst bearing his testimony on this point, he also speaks of the antiquity of hieroglyphic writing; and it is singular that while this kind of communication originated with the most ornate, best informed, most highly cultivated people on the face of the earth at that time—was carried to its highest pitch of excellence by a people celebrated for their wisdom and accomplishments—it produced no fruits of progress, but remained a sealed book to the world at large for more than two thousand years, preserving the secrets enfolded within its mystic characters. It is associated with barbaric grandeur and the existence of the grossest paganism, and only exhibited now in its principles where the darkness of ignorance and the most miserable superstition prevails; while, on the contrary, with alphabetic writing there has been a continual association of light, a genial diffusion of invigorating information, a gradual and outspreading dispersion of the rays of celestial influence, a descent and increase, as noble rivers from their source, of the founts of knowledge which have fructified the whole moral creation, giving it every day new accessions of strength to accomplish the divine mission of obtaining dominion over the whole world, and strengthening the belief that ere long the prediction shall be accomplished, that the knowledge of God shall cover the earth as the waters cover the sea.

Setting aside the evidence of the Chaldean bricks, there can be no question that the hieroglyphic writing on the pyramids and other monuments of Egypt are the

most ancient of all the records of language which we possess, and, as the reservoirs of ancient knowledge, may well be considered the foundation of symbolic language, and the more valuable, as, now when the key has been obtained, they are daily giving out some new proofs of the correctness of our sacred and other histories.

That these hieroglyphics were the construction of a highly enlightened class of men, is evident from the fact, that no records of anterior ages have given the learned so much trouble to decipher their true meaning as those have done, and none have returned such valuable results for the labours bestowed upon them—none have exhibited such an intricacy of art, and none have been so full of meaning when labour has elaborated their true signification. Another evidence of their value is found in the fact, that they constitute just the turning point between the earliest ages of the world, and that series of historical remains which depict the experience of men when the intellect slept for a period of nearly five hundred years—when men lived only on experience, and depended for all their guidance upon their knowledge of the past, and a few peculiar spirits existed for the direction of the future.

It has long remained, and does indeed to a certain extent still remain, a mystery, whether the records on the obelisks and other architectural and monumental remains of Egypt, were intended to spread moral and intellectual truths, or were merely statements of the dealings and doings of mankind during that remote era. From what we have ascertained, the probability seems to converge to the decision that they were to a great extent written for the latter purpose, and to a more confined extent for the former. It is quite compatible with the genius of the ages when these records were made, to suppose that, as among the chosen people of the Most High in after-times, before that people existed, there was both an open and a secret meaning displayed by the written characters of the ancient seers of the world. We know, from the statements of Sacred Writ, that when the miracles of Moses were wrought in the presence of Pharaoh, the wizards of Egypt had, by some peculiar inspiration, the power to perform wonders from an intercourse with the powers of darkness, just as he had authority to interfere with the regular order of nature from the Source of all light; and therefore it is not unreasonable to imagine that those eminent among the people of Egypt would be desirous of extending their influence beyond their natural lives, through the inscriptions on the national monuments, including those meant for public instruction, as well as those written in honour of their monarchs and the public men who acted under them.

During the period that elapsed from the time of Abraham to the Persian conquest, we know that Egypt stood supereminent among the nations for its knowledge of the arts and sciences, and that both had attained to a degree of perfection which

has never, even up to the present time, been surpassed among the people who occupy the centre and extreme east of Asia, and the medial provinces of northern Africa. They were therefore in the possession of a multitudinous set of ideas, both primary and secondary, and they needed some means of expressing those ideas not only for the benefit of the people at large and their successors, but also of that exclusive class among whom were treasured all the treasures of knowledge possessed by the initiated few. Herodotus, the most ancient of all the profane historians, who had himself travelled in Egypt, tells us that, among that strange and wonderful people, there were two classes of language—one termed *ιερα*, *sacred*, and the other *δημοτικα*, or for the people. Thales, Pythagorus, and Plato, all speak of this distinction; and from two of these philosophers we gather the title of these mystic writings, which it has given the moderns so much trouble to decipher. They tell us that the epithet which we ourselves ascribe to these writings was generally construed amongst their own countrymen from the two words *ιερος*, *sacred*, or a *priest*, and *γραφειν*, *to write*, thus simply stating that the hieroglyphics were sacred writings. Diodorus Siculus, who had also travelled in Egypt, and held converse with the priests in that country, confirms this view, and states that there were two kinds of writing, the “sacred” and the “demotic,” and leaves us to suppose that the former contained some secondary meaning which was not patent to the common reader, if the term “common reader” can be used in reference to such times as these. Clement of Alexandria, who entered very largely into this subject in the first century after the Christian epoch, terms the sacred writing “hieratic,” or a language devoted peculiarly to the uses of the priests—and the inquiries of later days have fully confirmed the affirmations of these authorities; while, as if further to carry out the truth of this assertion, Quatrimère gives from authority a list of two hundred names and words of the older Memphitic and Thebaic dialects expressed in these hieroglyphics, which were not in ordinary use among the Egyptian people. According to Clement there were three kinds of writing—the Enchorial, the Epistolographic, and the Hieratic; and states that the last was always used for a registry of sacred things, that all its characters were *tropical* or figurative, and these being united with ideographic or picture writing, became symbolical of that real meaning which the characters were intended to convey.

It cannot be supposed that so important a language as that inscribed on the national monuments and the sacred edifices of the most accomplished people of the early ages of civilization, remained without its influence upon the letters and the language of those neighbouring nations who drew their refinement and the arts from Egypt. We see its resemblance in their architectural erections, we observe

it in their customs, and, lastly, we trace it in the written characters not only of their language, but in those of the more subtle and informed groups of mankind, through whose instrumentality the tide of enlightenment was whelmed onward, until it settled in those countries where the arts and learning are conserved for the benefit of the world. Could we break through the barrier, as we doubtless shall some day do, though opposed by the barbarism of Central Asia, the connection between the hieroglyphics of Egypt and the picture writing of China would, without any great difficulty, be demonstrated, just as it may partially be traced in the written forms of the characters of the Syriac, Arabic, and Hindoo languages. Yet, important as the Egyptian people were, and influential as their records proved upon the characters of the communities around them, so mystic were their writings, that until nearly the present time their meaning was altogether lost, and the writing useless. Again, it may be observed, that such remarkable documents as the Egyptian hieroglyphics could not but excite much interest among men of observation. Soon after the darkness of the middle ages began to be dispersed, Piereus, a man much distinguished for the acumen of his remarks, brought them with much skill prominently under public notice, but did little further towards elucidating their meaning, than suggest that they were indicative of some sacred mystery. In the course of the seventeenth century, Kircher, a German Jesuit, devoted much of his attention to this subject, and displayed great ingenuity in accounting for the object of the writers of hieroglyphics, laying down a whole array of mythological detail as the meaning which they were intended to convey, but without any sufficient ground whatever to justify his apparently very unwarrantable assertions. About 1750, Zoega, a Danish philosopher, turned his attention very largely to the subject of the Egyptian hieroglyphics, and was tolerably successful in ascertaining the nature of the characters they contained. Palin, and the Abbe Pluché, carried this investigation still farther, till at last a faint glimmering of the true nature of the hieroglyphics was obtained.

In 1798, the National Institute of France—which may be truly considered as the academic embodiment of the principles promulgated by the eminent but most erroneous thinkers, the accomplished philosophers but most mistaken guides, whose writings led to the first marvellous French Revolution—designed an expedition of scientific men, who accompanied the military operations of Napoleon in Egypt, with a view of bringing into requisition for general use the historical treasures which Egypt was known to contain. The labours of these men, though of comparatively intrinsic insignificance, were of great inferential importance. Napoleon, who, with a spirit which all must admire—directed by an impulse and by moral principles which all must condemn—lent the whole benefit of his countenance and co-operation to

guage. Confessedly we have lost the Coptic, and though its remains may still be traced in the vernacular of Upper Egypt, as a language it is not now to be found; but whether it was so at the time these inscriptions were made is another matter, and that Dr. Young was right in his principal conjecture seems credible from the fact that, from the foundation which he laid, a clear interpretation of their meaning has at length been derived.

The matter was, however, much controverted, and a decision slept in abeyance until the time of C. J. F. Champollion le jeune, so styled to distinguish him from his elder brother, C. Féjeac, who was also a man of eminent attainments. The younger Champollion, who was a native of Grenoble in France, like Young, evinced at an early age a peculiar predilection for oriental literature. After some experience under Sayels de Sacy, in the French capital, he returned to his native place, where he was made keeper of the public library there; and, in 1814, published a work in two volumes, octavo, entitled "*Egypt under the Pharaohs*," which speedily brought him into extensive notice. The principle which he adopted was, that the symbols on the Egyptian monuments were intended to represent material objects only. It showed that he had read largely and thought much of his subject; and, in 1821, he published, at Grenoble, another work, entitled, "*L'Ecriture Hieratique des Anciens Egyptiens*." In this, he stated his opinion that the hieroglyphic and hierotic writing was different, and that the latter was merely a tachygraphy or short-hand writing of the former. In 1824 he published an enlargement of these views, and entered into an examination of the whole system, under the title of "*Procès du Système Hieroglyphique des Anciens Egyptiens, ou Recherches sur les Elémens premiers de cette Ecriture Sacrée,—sur les diverses combinaisons, et sur les rapports de ce système, avec les autres methodes Graphiques Egyptiens*;" in which he held that the phonetic signs were in accordance with the records of the most ancient books; that the real names of the parties spoken of in the inscriptions were best ascertained by such an interpretation, and that all hieroglyphic inscriptions are in a great measure composed of signs which can in no other way be interpreted. Klaproth criticised this book unmercifully, and endeavoured to show that Champollion had not succeeded in any single instance in making out the meaning of any single whole sentence, and that he could hardly construe any four words consecutively. But however deficient Champollion might have been in this respect, his reputation remained unimpeached; and through the interest of the Duke de Blacas, then in high favour at the court of France, he was sent to Leghorn to value some Egyptian antiquities which had been received there for the private account of Charles X., who was then on the French throne, of which he published a particular account in a letter addressed to his patron. There he was joined by the distin-

up in despair. Akerblad, a young and able philologist, was eminently distinguished for his zeal, and ultimately was able to carry this step a little farther; but death, or the intervention of other pursuits, prevented his going beyond that point. This, however, was something worth having, and tended to lay a foundation for future exertion. Dr. Young soon took up the subject with his characteristic energy, and employed the whole of his eminent oriental learning, to decipher the real nature of the symbolical representations in which the Egyptian language was concealed. This gentleman was, perhaps, of all men at that time in existence, best calculated to discover the occult meaning of these remarkable inscriptions. Born of Quaker parents of but indifferent condition, he, during the early years of his existence, was maintained at the residence of his maternal uncle, Mr. R. Davies, at Minehead, in Devonshire; and, it is said, evinced a wonderful precocity of philological talent, and speedily acquired a knowledge of the classical languages. From apparently accidental circumstances he was induced to study Hebrew, and afterwards Syriac, Arabic, and the neighbouring tongues; and at length attained to such an acquirement of oriental literature as to become the most distinguished man of his time in that department of literature. He was afterwards appointed, by the Government of the day, Secretary to the Board of Longitude; and, when that agency was laid aside, was constituted compiler of the "Nautical Almanack," which he conducted for several years, and laid the foundation for the reputation which it now enjoys, and certainly was the main source of that utility for which it has been so particularly distinguished. Having discovered the name of Ptolemaios, or Ptolemy, in the Greek text, on the Rosetta stone, in three places, he compared the position of the words in that text with those in the other two inscriptions, and found them to be enveloped by a *cartouch* or oval, with a certain mark which indicated the name to belong to a male person. The other characters he was unable to decide upon; but recollecting that Plato had stated that Thoth, an Egyptian, had invented an alphabet which had nowhere been preserved, he was led to conclude that the other symbols were simply phonetic signs, or signs by which the sounds of words were expressed; he conceived a meaning for the remaining characters, and sent a supposed translation of the inscriptions on the stone to the Asiatic Society. This excited a great sensation throughout Europe, and powerfully brought the attention of all the learned to bear upon the subject. Dr. Young's conception that the signs which he could not otherwise interpret were phonetic, was combated, in No. III. of the "Dublin University Review," by the assertion that the symbols of the hieroglyphic inscriptions on the monuments of Egypt were the emblems of a language altogether peculiar and different from the ancient Coptic, from which he professed to derive them, and that they could not therefore be phonetic signs of the then living Egyptian lan-

only excepting the Hebrew, the most ancient language in the world, but the various forms from which have ramified all those modes of writing now used, and which have been used, during an immense portion of the world's existence, by the great mass of pagan idolaters on the face of the earth: and—the thought cannot but again force itself on the mind—it is singular to remark, that wherever they have been adopted, the people, though arrived at a certain stage of refinement and information, have never progressed into the higher regions of intellectual culture, or attained to any very scientific knowledge of mechanical art. What they have been still they are, and so will remain until their systems be altered, and the records of their thoughts be composed of materials which have only a *mental* character requisite to render them useful. The Egyptian language and customs appear to have spread little towards the north, for we find in the Greek only a few of the particles which can be traced to an Egyptian origin; but towards the south and east the former appears to have spread until the whole of the Coptic has been merged in the languages of the various tribes of Negroes in the interior of Africa. Nor is any resemblance to them discoverable, except, as previously noticed, in the kindred written language of China, and among the barbarous and almost savage inhabitants who skirt the south-eastern extremity of the Red Sea.

While the descendants of Ham were working their way into the very heart of the African continent, the posterity of Shem were gradually spreading through the fertile districts of Asia, each receding from the original type of the language which their fathers had spoken and written, until at last the variety of dialects became almost innumerable. Menes, the supposed founder of the Egyptian monarchy; Ashur, the founder of the Assyrian, and Nimrod of the Babylonian empire, were, as far as we can learn from the insufficient records which we possess, about contemporary with each other, and were probably the first who assumed an authority, other than patriarchal, among their fellow-men; and, from their time, about 2100 years before the Christian era, there is every probability that the language of Abraham was the dialect commonly used, with slight variations, throughout all the region of Asia Minor; and while Sesostris, Cheops, and Sisac, were consolidating a power, which for centuries appears to have been more isolated and secure than any other, the descendants of Israel were receiving those divine institutions which were to separate them from every other people, and carrying into effect an intricate national code, in which the precise rights of every member of the community, in every relation of life, were carefully specified.

Here then was a standard of language from which to date all the various deviations; and as the several tribes receded from the original country whence

guished Italian, Rossellini, with whom he afterwards proceeded to Egypt, to make a personal inspection of the remains in that country. Rossellini returned in the course of a few months, but Champollion remained there until towards the close of the following year, and gave an account of his discoveries in a series of "*Lettres écrites d'Égypte et Nubie en 1829*," which was published in Paris in 1832. He had previously, in 1828, published his "*Precis du Système Hieroglyphique*," in which he had fully adopted the belief that a great portion of these mystical characters were phonetic, and that they were intended to designate the words in the Egyptian language, but not to resemble the sounds; while, in other places, the pictorial representation of the object indicated the object itself. This had partly been ascertained from the investigation of the inscriptions on the Rosetta stone, and the supposition was converted into certainty by the discovery of a writing in the interior of one of the temples which bore the name of Cleopatra, which contains several of the hieroglyphic characters met with in the name of Ptolemy. Still further investigation has continued to explore these treasures of historical knowledge, and to confirm the results which had been previously attained. According to Champollion, the plan adopted in the phonetic portion of the hieroglyphic writing, was to make the figure of that thing or creature the first letter of the word for which, in the Egyptian language, was the one they required. Thus, in the inscription on the obelisk in the island of Philæ, to the memory of King Ahom, an eagle is placed for the sign of *a*, the Egyptian name for that bird being *achom*; for *b*, there is a censer, *berbe* being the Egyptian term for that instrument; there is a *hand* sculptured for *t*, the Egyptian word being *tot*; and so on. By earnest and laborious examinations in the pyramids, and on the various temples and other edifices at Denderah, Thebes, Esneh, Edfou, Ombos, Philæ, and elsewhere, as well as in the writings which have been unrolled from mummies, the whole system was traced out, and the darkness which for nearly three thousand years had shrouded the records of a people, whose language had disappeared from among mankind, has been raised like a light mist from the objects of nature, and all the important historical data are daily being made apparent. The distinction between male and female names has been ascertained, the mode of writing, the means of forming the plural number of nouns, and very nearly the whole system of grammatical construction has been exhibited.

It would appear that in ancient Egypt there existed three different dialects—the *Memphitic*, answering to the phonetic style of writing; the *Sahidic*, to the emblematic; and the *Bashmodic*, to the figurative or pictorial. Sometimes the writings are made from left to right, sometimes from right to left, and sometimes again, as is generally the case on columns, from top to bottom; so that we have here, not

5th. *Insular*; or those which, from the isolated position of the inhabitants of the islands of the sea, have been greatly deflected from the original root, but which have yet retained the main characteristics of their parent tongues.

IV. AFRICAN; or those which, declining from the mystic aspect of the symbolic state, have at length lost the principal features of the original tongue of those who used it, and have degenerated into the unformed jargon of barbaric life.

V. The AMERICAN; or those which are used by a class of people of evidently mixed origin, exhibiting the peculiarities indicative of the sources from whence they are derived, and at last became so blended as to constitute an original class—original now, from the constituents which have been impounded for the purpose of their formation, but which show their foundation from the fact, that an immense number of terms in the dialects of the Red Indians of North America, and in those of the residents in the southern portion of that continent, have been discovered, which are perfectly identical with the same expressions in the ancient Hebrew; and to such an extent, indeed, that hypotheses have been built upon them, that the people by whom they are now used are neither more nor less than the lost ten tribes of Israel, for whom search has been made throughout the whole world. These hypotheses are doubtless erroneous; for later discoveries, to which we are about to allude, have been made, by which the descendants of these people—the descendants as a national body—have actually been found; but yet so prevalent are Hebrew terms

they emanated, their languages would, in the natural course of things, gradually become more and more remote in character, until they attained the distinctive types which they now possess. Whilst Hebrew, in its various gradations, was thus being carried eastward and north-eastward, and the symbolic writing of the Egyptians was tending to the southward, south-west, and south-east, Greek—which appears, from its resemblance in the power to represent by sounds the numerous objects and influences of nature, to have been the earliest offspring of Hebrew, and, from the peculiarity of its inflections, the dialect assumed by the most refined and intellectual of the departers from the plains of Shinar—was gradually working its way toward the direct westward, into those regions where the temperature and salubrity of the climate were calculated to give the inhabitants leisure from the cultivation of the soil, and that vigour of intellect which results from the mental culture for which such leisure affords the opportunity, and was fast merging into what the language afterwards became—an instrument fitted to express the innumerable impressions of outward objects, and the most abstruse results of mental processes. The offshoots of the Babylonish empire were meantime pushing into the northern districts, and thence, both eastward and westward, into the far-off plains where the rigours of the atmospheric effects would occasion an activity of life, and a hardness of character, which would be best expressed by the rude phraseology that denoted the wants and marked the intercourse of those Scythian hordes, who, in their adventurous progress, at length penetrated to the wilds of Scandinavia and the prairies of Gaul; destined afterwards to cast the impress of their character on the denizens of the British isles; ultimately to infuse their force into all the languages of northern Europe, and work an immense effect on the modulation of those which came from the south. The great migrations of nations then ceased, and the foundation of all the languages of the world was permanently laid.

Adelung, who was perhaps one of the most accomplished philologists that ever existed, has divided these several languages into five grand classes, with sundry subdivisions, as follows:—

I. The MONOSYLLABIC; or those which are the result of symbolic writing:—

Chinese.	Avanese.
Siamese.	Tibet. n.

II. INDO-EUROPEAN; or those which derived their origin from the Hebrew root:—

Sanscrit.	Arabian.
Median.	Lycian.

days, and containing references to, and instructions for, all the complex intricacies of a large and enlightened community; the Greek filled with, at the best, absurd fables and questionable accounts of facts, real or supposed—we have the knowledge that the former were daily read in the ears of all the people, were scrupulously regarded, and so carefully handed down, that even among the most thoroughgoing infidels who have possessed any information of things gone by, their authenticity has never been subject to a doubt. To the Hebrew, then, we have to look for the root of all language.

Next to it, apart from the symbolical language of the Egyptian, is the Greek. Popularly speaking, Cadmus is regarded as the inventor of letters. He was about coeval with Moses, and is pretty well ascertained to have emigrated into Thrace from Phenice. Now, Phenice was notoriously the port of the land of the Jews, the mart from which all enterprise to countries beyond the sea emanated, and to which all foreigners resorted. At that time the Greek alphabet is well known to have been imperfect, and then there was a considerable intercourse across the Levant with Egypt. Indeed, questions have been seriously raised and long argued, as to whether the literature of the Greeks was or was not derived from the Egyptians. These questions are however fully set at rest by the fact, that all the earliest Greek manuscripts which have reached us bear the characteristics of the Hebrew nomenclature—the same fulness of expression—the same strict, or almost strict, analogy to natural sounds—the same simple, but yet rather inflected, construction—and, moreover, and to add to all, precisely the same mode of writing; for the earliest inscriptions we possess shows not only many of the forms of the Hebrew alphabet, but, as if to chronicle the progress of learning, give not only the ancient mode of writing from the right hand towards the left, but also that now used, from the left hand side towards the right. The most ancient literal Greek inscription which has come down to us exhibits both these methods, and is contained on a tablet which was disinterred upon the promontory of Sigeum, a headland of the Syrian coast, situate near the site of ancient Troy, and must have been engraved as early as the time, at least, of Solomon, and perhaps of David. Cadmus, it should be observed, was followed by Minos, the first of the Grecian lawgivers; and it is remarkable, that no language has ever become permanent until it has been employed to register the moral and religious precepts by which men are to be guided in observing their duty towards God and their fellow-creatures. The Sigeum legend was engraved upon a pillar of beautifully white marble, nine feet high, two feet broad, and eight inches thick; and, as appears by a cavity on the top, was intended to bear a bust or statue of Hermocrates, whose name it bears. It is at least three thousand years old, or about the same date as that ascribed to the works of Homer, and in

in the language of the interior residents of the New World, that, considering the geographical position of America with Asia—the one being only sixty miles of sea passage in one spot from the other—there is ample evidence to believe that they are the remote subjects of him who should have filled the place of Hosea to that branch of the chosen people.

Of the first age of the world, from the beginning of nature to the confusion of tongues, whence the origin of nations may be dated, we have no records but those open notices which are contained in Holy Writ. Nor do we need any, for the facts speak for themselves. Mankind were then in a state of transition from the patriarchal to clannish and nomadic life; and from that period to the consolidation of an empire under Cyrus, which may be called the second age, we are almost equally destitute of records. Yet we are not only not without witness, but have abundant testimony to the progress of society, and the advance of the means by which men might convey a knowledge of their ideas to their fellows. This second age embraces a period of some 1800 years, during which men became accustomed to the social state, and needed the various appliances of speech to diffuse the knowledge of duty, and the obligations which resulted from the several relations of life. As has been stated above, the best and most authentic records are contained in the Mosaic chronicles. That these are genuine, and the main origin of all written language, is proved from a variety of evidence. Tacitus, who lived within the first century after our Saviour's death, and when the Romans, who were at that time the conservators though not the originators of learning, were mainly pagans, states that the Jewish Scriptures were looked upon as exceedingly ancient even in his day. The Books of Moses, comprising Genesis, Exodus, Leviticus, Numbers, and Deuteronomy, were written fully 1500 years before our Saviour's birth, or more than three thousand three hundred and fifty years ago, while the most ancient chronicles to which the Greeks lay any claim are those of Hesiod and Homer. As to the existence of Hesiod at all, like that of Ossian, very grave doubts are entertained by the best informed among learned men. Homer's writings are better accredited, and speak of circumstances so consonant with the facts of Grecian history, that there is hardly any doubt of their genuineness—but still there is a cloud over their origin. Yet, granting them all the authenticity to which they are entitled, they bear no comparison with the antiquity justly ascribed to the production of the Jewish leader, being only coeval with the date of Solomon, in whose days the Israelites had attained to the extremest magnitude of their dominion. To say nothing of the intrinsic character of the respective works—the Hebrew treating of all the great mysteries of natural and supernatural things, giving the history of mankind from their earliest

migratory Arabs. The new Babylonian and the Assyrian empires were closed by the prowess of Cyrus, who constituted the dynasty of Persia, and pushed on the language thus strengthened from so many sources to the westward, until the Arabs, who inherited his enterprise with his authority, carried it, partly through religious enthusiasm, and partly from the efforts for conquest, to the extreme verge of northern Africa, where the waves of the Atlantic laved the bases of the pillars of Hercules; and at length, having made their way into Spain, urged on their conquests until, under Abdoul Rahman Ben Abdoullah, they received that check by the Franks, under Charles Martel, on the plains of Picardy, in A.D. 733, which again drove them beyond the Pyrenees, where they remained in nearly predominant authority for four centuries, diffusing their influence over the expression and the manners of the people where the Romans had so long reigned supreme, until it may almost be a question whether the Spanish language is more Moorish or Latin. The Portuguese, being on the outskirts of the Hispanian peninsula, were less subject to the dominion of the African conquerors; and, as in all other instances the domiciliated tongue was preserved among the native inhabitants, we consequently find that there were more of the genuine Latin terms retained in their language than in that of any other people, save those of Italy, on the continent of Europe. In Iberia, therefore, and in the provinces of middle Italy, we find the true germs of the Etruscan dialect.

It might seem strange to one but little conversant with the intromission of words, that Etruria should have been the cradle of that set of phrases which was afterwards to form so large a portion of the language through which the knowledge of truth, both physical and intellectual, should be disseminated. The wonder will however disappear, when it is recollected that the narrowness of the Adriatic Sea allowed of a proportionally free intercourse between the north of Italy and the Albanian provinces—that the tendency of civilization was continually trending westward, while the pressure of population was coming from the north. From the north and from the east, the tide was pouring down which was to alter the language of the whole kindreds of the earth. Etruria was unquestionably peopled in the earliest ages: all its antique vases and other monuments attest this; and it would seem that the Latin language itself was formed out of the dialects of those first inhabitants who brought their Greek from the neighbouring peninsula, with its northern infusion, and those who came direct from the Phrygian regions, where the Hebrew roots were still in active exercise; so that we see combined in the Latin language the force of the expression from the north, the strength of expression from the Mediterranean, and the subtle inflections, though in an inferior degree, from the refined and intellectual residents of the domains of Greece.

all probability was in existence anterior to them. The inscription begins on the left hand side of the tablet, and proceeds to the right; but the next line begins at the right hand, and proceeds to the left; and thus it is carried on, each succeeding line beginning where the preceding one finished, a mode which was shortly afterwards superseded by the present one of writing from the left hand towards the right, as is shown by the almost contemporary inscriptions on the pedestal of the Colossus at Delos, and that of Amphitrion on one of the tripods of Thebes. The Sigeian inscription, in classic Greek, runs thus:—"Φανοδίκῳ υἱοῦ τοῦ ΕρμOCRάτους τοῦ προκονηαίου, καὶ ἐγὼ κρατῆρα κάπνιστατον καὶ ἡδμεν ἐς προτάνειον ἔδωκα μνῆμα Σιγείῳ εἰς δὲ τί πασχῶ μελεδαίνειν ἕω Σιγείῃς καὶ μὲν εποίησεν ὁ Αἴσπος καὶ οἱ ἀδελφοί." "I am Hermocrates, the son of Phanodiceus, of this promontory; and I have presented in the Prytoreum [a common hall in which the Grecians feasted together, and entertained such as had deserved well of their country] a cup, with a stand and wine-strainer, as a monument to the Sigeans. If, then, I endure care on any account, I go to the Sigeans, and Æsopapus and my brethren have erected a monument for me." The whole inscription bears evidence of its antique date, and of the primitive manners which prevailed at the time it was made; and is particularly interesting as showing the progress of language from its root to its most ornate character in ancient times.

Whilst the Attic phraseology was progressing—until, under the hands of Herodotus, Sappho, Pisistratus, Pindar, Xenophon, Æschylus, Sophocles, Aristotle, Demosthenes, and Plato, it attained to that rich finish and affluent expression which has made it, in all its bearings, the model of language—the Egyptian was gradually degenerating, until the vernacular of the country became almost unintelligible, and was ultimately driven into the regions of medial Africa, whilst its use was replaced by the more refined Greek and the corrupted Hebrew, which had assumed the form of the Chaldaic or Syriac, afterwards to take the modification of the Arabic, which at length became the third great groundwork of the modern languages of civilized society in that part of the world.

The ancient Babylonian empire, founded by Nimrod, was partly lost through the emigration of the inhabitants towards the north, and partly absorbed in the Assyrian empire under Ninus and Semiramis. The monarchs of that sovereignty, Pul and Tigleth-Pileser, carried off the two tribes and a half of the Israelites, who dwelt beyond Jordan, about the early part of the eighth century before the Christian era; and their successor, Shalmanezar, deported the remainder of the people some nineteen years afterwards, and conveyed them to the district termed by the Greeks Abdiene, which spot became the nucleus of the power afterwards wielded by

ignatory Arabs. The new Babylonian and the Assyrian empires were closed by the prowess of Cyrus, who constituted the dynasty of Persia, and pushed on the language thus strengthened from so many sources to the westward, until the Arabs, who inherited his enterprise with his authority, carried it, partly through religious enthusiasm, and partly from the efforts for conquest, to the extreme verge of northern Africa, where the waves of the Atlantic laved the bases of the pillars of Hercules; and at length, having made their way into Spain, urged on their conquests until, under Abdoul Rahman Ben Abdoullah, they received that check by the ranks, under Charles Martel, on the plains of Picardy, in A.D. 733, which again drove them beyond the Pyrenees, where they remained in nearly predominant authority for four centuries, diffusing their influence over the expression and the manners of the people where the Romans had so long reigned supreme, until it may almost be a question whether the Spanish language is more Moorish or Latin. The Portuguese, being on the outskirts of the Hispanian peninsula, were less subject to the dominion of the African conquerors; and, as in all other instances the dominated tongue was preserved among the native inhabitants, we consequently find that there were more of the genuine Latin terms retained in their language than in that of any other people, save those of Italy, on the continent of Europe. In Iberia, therefore, and in the provinces of middle Italy, we find the true germs of the Tuscan dialect.

It might seem strange to one but little conversant with the intromission of words, that Etruria should have been the cradle of that set of phrases which was afterwards to form so large a portion of the language through which the knowledge of truth, both physical and intellectual, should be disseminated. The wonder will however disappear, when it is recollected that the narrowness of the Adriatic Sea allowed of a proportionally free intercourse between the north of Italy and the Ithacan provinces—that the tendency of civilization was continually trending eastward, while the pressure of population was coming from the north. From the north and from the east, the tide was pouring down which was to alter the language of the whole kindreds of the earth. Etruria was unquestionably peopled in the earliest ages: all its antique vases and other monuments attest this; and it would seem that the Latin language itself was formed out of the dialects of those first inhabitants who brought their Greek from the neighbouring peninsula, with its northern infusion, and those who came direct from the Phrygian regions, where the Phrygian roots were still in active exercise; so that we see combined in the Latin language the force of the expression from the north, the strength of expression from the Mediterranean, and the subtle inflections, though in an inferior degree, from the refined and intellectual residents of the domains of Greece.

Here then we have two of the chief elements of the English tongue. The third is derived from the other source provided by the great migration of nations. Part of the Babylonian, with the great Assyrian empire, had been merged, a few centuries before the Christian era, under the Parthian dominion. When under the force of the Roman conquests this was broken, during the time of Mithridates, the great impulse which had been given to the northern tribes of Germany to emigrate westward, some ages before, was increased manifold, and the outgoers who had settled were pushed with more intensity, and in greater numbers, towards the remote corners of the old world. The north of Germany, the southern districts of Norway and Sweden, and the whole of Denmark, were peopled. Britain had received its portion of those who were wandering in search of a settlement. The new comers gave additional animation to their movements, and the Alemanni, who had become conspicuous for their number, their hardihood, and their bravery, soon established their position, and threw out communities who were destined to become nations. Among these communities, the Celts were remarkable for the earnestness with which they pressed forwards; and they, in a short time, became the residents of the British Isles, bringing with them the superstitions, the dialect, and the idioms of the race from which they derived their origin. With them were mingled a few of the inhabitants of Scandinavia, whose language, drawn from their wooded heights and mountain fastnesses, was termed *Gaelic*, just as that of their compeers, who came from the sandy plains and meagre prospects of the districts which lie between the confluent streams of the lower Rhine and the Scheldt, was called Celtic. In these two dialects we find the foundation of the English language, so far and no farther as it expresses the actions of motion and relation, the primary sensations derived from the influences of the elements, and the words which indicate the simplest necessities of mankind. The Celts appear to have had no written language, but possessed ample tradition, and a certain ability to construct highly figurative expressions. The people were therefore well prepared to receive and use a nobler and more precise mode of expression, but centuries elapsed without any great advance being made.

Josephus has given us sufficient intelligence to enable us to decide that the two tribes and a half of the Israelitish people, first transported to the district of the north of Asia Minor, found their locality between the Dead and Mediterranean Seas; and he and Jerome, and other authorities, have shown us, that around them there were settled several active and fierce tribes, whose population rapidly increasing, was ultimately forced upon the unoccupied plains of eastern Europe. These tribes made their way along the south-east of Germany, gradually taking up in their progress the *spirit* of the Grecian language, until they were precipitated upon Rome, and subverted the empire. The contest was, however, of long continuance, and while the

country, and substituted the Norman-French in its place. The vernacular had, however, been too deeply established, too much integrated with the habits, the thoughts, and the necessities of the people, to be destroyed even under the compression of a tyrannic feudalism; and it still, therefore, continued the language of the country—modified and greatly altered, it is true, and intermixed with many of the terms which constituted portions of the phrases of the Norman noblesse. The Latin language too, owing to the ritual of the Roman Catholic Church, and the studies of some of the best works in it, had tended much to alter the Anglo-Saxon dialect; so that, when its use was revived in the reign of Henry III. about the year 1216, it might very properly be termed *ENGLISH*.

So various and so numerous were the elements which were brought into requisition to form the English language, that it may be said to be compounded of one portion or other of every language in Europe. From the Celtic it derived its original force for the expressions of the feelings of barbaric life; from the Saxon, the fulness and the copiousness of expression for natural objects; from the pathos of the Frankish dialect, that tenuous character which enabled it to express the niceties of conversational phrases; while, directly from the Latin, it had drawn that grammatical inflection, which, though entirely different from its original type in appearance, is yet sensibly evident in its essential qualities; while the permeative nature of the Greek had supplied the peculiar energy by which it is distinguished.

From this point the language of the English people never deviated from its foundation, but still continuing to draw new powers from its former sources, continued to improve in flexibility, comprehensiveness, and strength, until it attained its present purity and perfection. The process was, however, one requiring centuries for its completion, but one which is equally interesting and peculiar, and it appears both necessary and pleasing to show the states by which it progressed.

Among the earliest of the muniments of English literature is the chronicle of Robert of Gloucester, supposed to have been written before the year 1278, and which bears all the marks of the period at which it was written. His production, and that of Peter Langtoft, were both admirably edited by Hearne, and are invaluable as relics of the old English language. Robert of Gloucester's chronicle, which professes to give a description of Ireland, opens thus:—

“Yrlondi ys aler yt bess withe oute Engelande,  
The sea goth al abouten hym eke as ich onderstonde.”

The whole of the poem is singularly quaint in its character, and delightfully interesting as a subject for study, but want of space prevents a longer extract.

Peter Langtoft was an Augustine canon of the establishment at Bridlington in Yorkshire, and wrote early in the reign of Edward II. who ascended the throne in 1307. His poem professed to give an account of the expedition of the Earl of Warren into Scotland against Sir William Wallace; and it is, as will be observed, singularly free from the foreign phrases, though with the halting accent of course, of the period. The poem opens as follows:—

“Whan Sir Jon Warene the Soth onderstoode,  
That the Wallis gan breune and oste gadred gode,  
And went to Straleyne agayne Wallis William;  
Bot the erle withe mykell payne disconfit away raune,  
And that was his folie, so long in his bed gan lyge  
Untille the Wallis partle had umbelaid the brig,  
With gavelockes and dartes suilke ere was none sene  
Myghte no man departe, ne guide, no go betwene.”

It is curious to compare these specimens with Legamon's translation of the “Brute d'Angleterre,” which is supposed to have been produced about the close of the twelfth century, and from which the following is an extract:—

“Tha the masse was isungen  
Of chiracken les thrungen,  
The kinge mad his folke  
To his mete verde  
And mucche his duzethe  
Drem was on hirede  
The quene an other halve  
Hire hereberve isolte  
Hes hafde of wif ronne  
Wunder are moni on.”

It was shortly after the time of Robert of Gloucester that the language began to settle into its purely English form; there was greater freedom of expression, more facility for rhythm in the poetry, and a greater approximation to its perfect construction, as is exhibited in the following extract from “Ellis's Early English Poets,” which, however, it should be observed, has been greatly divested of its antique spelling:—

“Farre in the sea, by west Spain,  
Is a londe chote Cockayne;  
There n's-land under heaven rich,  
Of wel of goodness it y-like;  
Though Paradise be merry and bright,  
Cockayne is of a fairer sight.

What is there in Paradise  
 But Grass, and Flower, and green rise ?  
 Though there be joy and great dute,  
 There n'is meat but fruit ;  
 There n'is hall, bure, nor bench,  
 But water mannis thirst to quench."

Here it will be seen that there is hardly a word which is not of a purely English character, and that the accent of the rhythm is remarkably well preserved.

The vision of "Piers Plowman," which was written about 1362 by Robert Langland, a secular priest, is the next best deserving of especial notice; and it is observable, that although, through the continental wars of Edward III., in whose reign he lived, there was at the time great intercourse with France, the progress of the language would seem rather to intimate that the accessions it had received were more of a Gaelic than of a Gallic character, although there is a slight intermixture of corruptions from the latter source, as the following extract will show:—

"An to the church gan ich God to honourie,  
 By for the crois on my knees knocked ich my brest,  
 Lykinge for my sennes, segginge my paternoster,  
 Weeping and wailing tyl ich was a sleepe ;—  
 Then mett me moche more than ich by for tolde,  
 Of the mater that mete fyrst on Malverne Hills."

Contemporary with Langland, were Chaucer and Wyckliffe, the leaders of their day in poetry and prose. What Dante and Tasso did for the Italian language, and Froissart for the French, Chaucer did to a great extent for the English—for it is hardly too much to say, that there is not a word in the old Anglican dialect which may not be found in Chaucer's writings, in beautiful as well as most appropriate use. He diffused with his poems a taste for poetry, tended greatly by his example and influence to promote the peaceful arts, and induced that energizing spirit among the better informed men of the day, which ultimately resulted in opening the fountains of knowledge to the whole body of the people, and led the way to that religious and political freedom, which is the best and most valuable birthright to every one entitled to the name of Briton. The writings of Chaucer were eagerly and extensively read among those who possessed the accomplishment of reading; and they well deserved such an honour, as will appear from a perusal of the following beautiful address to Spring, which is not only a fair evidence of his style, but shows the language as he used it. It should be observed that, as a general rule, the lines of the early British poets should be read as they are written, each syllable being

turn of a courtier's favour, the sweet strains of Henry Howard, Earl of Surrey, came refreshingly to soothe the spirit; and though his young blood was spilt when he had as yet hardly attained the prime of life, the lines which he penned will never perish, and did their useful service in bringing more to a state of perfection the language in which he wrote. He was beheaded for one of those many political offences which were ascribed, equally with and without apparent foundation, to every public man who had the misfortune to incur the enmity of the minions of Henry VIII. or their tyrannical master, and died under the axe, in 1547, when in the thirtieth year of his age. The following sonnet was written as a melancholy memorial of the death of his friend, Sir Thomas Wyatt, whose fate he once little expected to experience, for few men were more popular in his day:—

\* Diverse thy death do diversely bemoan,  
 Some that in presence of thy livelied  
 Lurked, whose breasts envy with hate had swoln,  
 Yield Cæsar's tears upon Pompeius' head.  
 Some that watched with the murderous knife,  
 With eager thirst to drink thy guiltless blood,  
 Whose practice brake by happy end of life,  
 Weep envious tears to hear thy fame so good.\*

A work was at length published which was eminently calculated to be the precursor of that which was to be the standard of the English language throughout all ages. This was the translation of the Bible by Miles Coverdale, which first appeared in 1532. This edition being rapidly bought up by the Roman Catholic authorities, another was speedily produced, and almost immediately disseminated, so that one great means of diffusing the language in its then comparatively perfect state had been happily attained; while the discovery and improvement of the art of printing during the preceding half century, provided the means of preserving what it had taken so many centuries to construct; and the English language thence became a veritable record of truth in all its branches, both mundane and divine.

About this time also the study of the learned languages began to be very prevalent; and, in the year 1501, Dr. Collet appointed William Lily, then the first Greek scholar in England, to the head mastership of his new school by St. Paul's Cathedral, where the study of the language in which he most excelled was particularly attended to; while the same earnestness in cultivating it was evinced at Cambridge, by Smith, Cheke, and Ascham, through whose labours chiefly the higher classes throughout the country became acquainted with the stores of Grecian and Latin literature. And richly has the boon then bestowed been returned; for from that period we may date an improved mode in the inflection of the language, and an

pronounced, as is the case in the Latin and Greek classics. The date of this poem is about the year 1370:—

“ Whanne that April with shoures sotē,  
 The droughte of March hath pierced to the rote,  
 And bathed every veine in swiche licour,  
 Of which vertue engendred is the flour ;  
 When Zephirus eke with his sote breth,  
 Enspired hath every holte and bethe,  
 The tendre croppes, and the yonge sonne  
 Hath in the race his halfe cours yronne ;  
 And small foules maken melodie,  
 That sleepen alle night with open eye ;  
 So priketh bene nature in his corragēs,  
 Than longen folkes to gon on pilgrimages.”

Contemporary with Chaucer, was one equally remarkable for his attainments and abilities, and far more distinguished for the qualities of a mighty spirit which he displayed, and for the effects which he was made the instrument of working. John Wyckliffe, who was born in Yorkshire about the year 1304, soon evinced the characteristics of his nature, and his capacity for influencing the minds of his fellowmen. The unflinching boldness with which he preached, and the astonishing intrepidity which he at all times showed in withstanding, when he thought them wrong, those to whom position lent power, caused his words to sink deeply into the hearts and recollections of his countrymen, and therefore largely affected their modes of speech. Among other means to influence them, and expose the ecclesiastical abuses of the day, he translated a great portion of the Scriptures, from which, as a curious example of the dialect of the time, a short extract is inserted from the seventh chapter of the Book of Acts:—

“ This Moises ledde hem out, and dide wondres and signes in Egypt, and in the Red See, and in the deserte, fourti gheeres. This is Moises that seide to the sones of Israel, God schal reise to ghon a prophitte like unto mee.”

Much was done during the century succeeding Wyckliffe's death towards the improvement of the language, particularly in the early part of it, through the munificent endowments of William of Wykeham, at Oxford and Winchester, and, through the effect of his example, in the foundation of colleges and schools, both at the former of these two places and at Cambridge; while the writings of Sir John Fortescue, Archbishop Cranmer, Sir T. Elyot, Sir Thomas More, and Roger Ascham, contributed to secure and diffuse the improvement which had already been attained. Yet amid the din of theological discussion, and the terrible excitement of polemical controversy, when life and death too often sat upon the result of an argument, or the

turn of a courtier's favour, the sweet strains of Henry Howard, Earl of Surrey, came refreshingly to soothe the spirit; and though his young blood was spilt when he had as yet hardly attained the prime of life, the lines which he penned will never perish, and did their useful service in bringing more to a state of perfection the language in which he wrote. He was beheaded for one of those many political offences which were ascribed, equally with and without apparent foundation, to every public man who had the misfortune to incur the enmity of the minions of Henry VIII. or their tyrannical master, and died under the axe, in 1547, when in the thirtieth year of his age. And richly has the boon then bestowed been returned; for from that period we may date an improved mode in the inflection of the language, and an

affluent addition to its stores of expression, combined with a large increase of force in their spirit and meaning. Thus, when the genius of Beaumont and Fletcher, and Jonson, and, above all, Shakspeare, required a medium through which to convey those innumerable impulsive ideas, and those delicate tinges of meaning and feeling which genius only can conceive, an instrumentality was amply provided most aptly fitted for their use; and, truly, rich and noble and splendid are the monuments of intellect which endowments such as few since the creation have been gifted with, have enabled those who used the language to leave behind them for the honour of their country, and for the delight and benefit of mankind.

But another work, nobler even than theirs, was yet to follow—a work which was to constitute the *standard* of that language in which are enshrined, as in a temple worthy of the Divinity from whom it emanated, a countless host of the noblest thoughts and the brightest scintillations of man's celestial nature, that ever gleamed through the human intellect—a language destined to be spoken by the most powerful of the nations of the earth—a language to be spoken over a more varied and extensive surface than any other that has ever been used by mankind—a language appointed to the high honour of disseminating to the far-off islands of the boundless ocean, and to the remotest corners of the habitable world, the glad tidings of great joy contained in that Gospel which has made known to man the glories of their origin and their destiny, which has opened to us a knowledge of spheres beyond the sky, and which has brought in every clime the knowledge of life and immortality to light. This work was the authorized translation of THE BIBLE.

If one time for the great undertaking could possibly be more propitious for this great work than another, it was that in which it was actually executed. The Reformation had been long enough completed to give to men of learning experience sufficient to enable them to use their emancipated powers wisely and with effect. Curiosity, interest, and duty combined to urge to the diligent study of language. The importance of the trust was fully appreciated. Like Hilkiah, they had found the law; and it required the very highest use of all the powers of their native speech to transcribe it for the hearing of the people. Men most noted for their attainments, their judgment, and their piety, were selected for the task. They were divided into sections. Each section took its appointed portion for translation; and then, when each individual had performed his task, the whole of the work was compared and revised: and it was not until a manifold judgment had been most deliberately passed, that even a single sentence was suffered to remain as a portion of the true version of the Holy Writ. And so they went on, until the whole was completed: and a monument of genius and carefulness was erected which will last so long as the English language shall endure; and a fountain of knowledge was

opened, out of which countless myriads have drank the waters of life, to their present comfort and their everlasting happiness. It is allowed that no work was ever more admirably performed than that of the Commissioners of James I.; and whenever the standard of the English language is required, the learned of all sects, opinions, and degrees, uniformly turn for the resolution of a doubt to the translation of the Bible.

The foundation of the numerous schools instituted by royal and private munificence, during the first half of the sixteenth century, and especially those instituted under Edward VI. during the progress and completion of the Reformation, bore ample fruit of the highest character. The emanations of genius which shone out with such peculiar lustre during the reign of Elizabeth, were admirably seconded by the efforts of the educated men who had gone through a regular series of scholastic training; and who, towards the latter end of the reign of that sovereign, brought all the appliances of their acquired knowledge, to the dissemination of general ideas and principles and the settlement of a regularly-constituted language. Throughout Europe there was a universal revival of learning. The ancient classics had been, to a great extent, recovered. The experience of those who wrote them, and all the details of the refined ages of antiquity, had been brought into play for the common benefit. The English colleges were advancing in industry and intelligence, as well as repute; and the hardy spirit of inquiry, induced by the results of the civil contest, literary as well as political, had been towards the middle of the sixteenth century largely invigorative of the old English tongue. Terms appropriate to the expression of ideas, whether referential to physical or intellectual objects, had been abundantly incorporated both from the Latin and the Greek—the phraseology chiefly from the former, the spirit from the latter, of these two universal tongues: and when the galaxy of talent arose at the commencement of the seventeenth century, to shed lustre on the Augustan age of literature, the comprehensiveness, the softness, and the variety of the national means of expression, had been so wonderfully increased, that little but technical improvement was either necessary or desirable. Intercourse with the continent, both during war and in peace, had permeated it afresh, with the subtle energy which distinguished the denizens of Attica and their neighbouring nations. The labours of the polemical divines, from 1650 to 1700, had filled the language with full and powerful terms, for which it had been well prepared by the works of Shakspeare, Jonson, and their contemporaries. Dryden, Addison, Steele, Pope, and their fellows, added the light artillery of the Belles Lettres, for which the comparatively refined manners of the period wrought a convenient facility, and with which they combined that beautiful finish—admirably typified in the *ad unguam* polish of the olden sculptors—which

was all that was necessary to complete and fit a language for the purposes of the most highly complex and ornate state of society. There was but one thing wanting. That was a repository where all these treasures of intellect could be safely deposited, for the advantage of the existent and the wealth of future generations. That repository was supplied by, whatever may be thought of his style of writing, that colossus of literature, SAMUEL JOHNSON, who, poor, unaided, and alone, built up that monument of an imperishable fame, in his Dictionary of the English Language, in two volumes folio, wherein are exhibited all the vastness of a capacious intellect and all the resources of a most surprising attainment. With a labour that must have been immense, and with a knowledge and judgment that hardly any other man possessed, he drew from all their open and secret sources the meaning of the words of which the English language was composed, and which, for all the purposes of merely literary communication and moral instruction, might well then be thought to be complete.

There was, however, another step farther yet to go. When the polemical and political disputes which had agitated the country were brought to a comparative close by the Act of Settlement of 1689, men had leisure to turn their attention to the more peaceful occupations of scientific pursuit. The discoveries of Galileo had paved the way for a deeper inquiry into the laws and movements of the physical world than had ever before been attempted, either by the Ptolemies, Pythagoras, or any of the ancient philosophers; and when Newton came upon the stage of life there was a large space opened for the exercise of his genius. The wonderful fields explored by his profound researches into nature prompted to new inquiries, until Linnæus in the vegetable kingdom, and Buffon in animated life, laid such facts before the public, as required a new nomenclature to render them intelligible to the community; and as the facts which had to be stated were quite beyond the range of knowledge, and, consequently, without the means of comprehension, possessed by the Anglo-Saxon projectors, there were no roots in the language out of which to evolve a series of terms fitted to state the circumstances which those authors had to communicate; and the Greek and Latin languages were searched, and searched successfully, to supply the deficiency. The result was, that a set of compound words were formed, well calculated to express precise ideas of the several objects of scientific consideration, and singularly indicative of their several natures. Thus Astronomy, Geography, Botany, and Physiology, obtained their distinctive terms; and when, through the celebrated philosophers Scheele, Priestley, Dalton, Davy, Babington, Watt, Saussure, Lyell, De la Beche, and a host of others, the patent and occult properties and actions of natural bodies had to be designated, the same course was pursued; and compound terms from both the ancient languages,

it especially from the Greek—though by whom they were invented can never be thoroughly ascertained—have been incorporated, and now form an integral portion of the English language.

Thus has the language of Britain been constituted—a language most beautifully and admirably constructed—a language replete with every epithet necessary to press the utmost variety of simple ideas and objects, as well as the most abstruse workings of the mind and the most subtle promptings of the heart; the tongue of freedom and of truth—a language fitted to amplify as the necessities of mankind may arise—a language, comprising within its scope the elements of all the other languages of the world, the worthy medium of the noblest sentiments and of the most magnificent intellects—a language which has met, and is competent to meet, the exigencies which the requirements of humanity may occasion for the purposes of intellectual advancement or the benefit of our common existence.

# A UNIVERSAL ETYMOLOGICAL AND PRONOUNCING DICTIONARY OF THE ENGLISH LANGUAGE,

EMBRACING ALL THE TERMS USED IN ART, SCIENCE, AND LITERATURE.

## A.

A is the first letter of the English alphabet, as it is of all other alphabets, except the Ethiopic, of which it is the thirteenth, and the Runic, of which it is the tenth. The reason of this is probably on account of its representing the first vocal sound naturally formed by the organs of speech, uttered by merely opening the mouth. The name of the letter is the sound of *ay* in *day*; but it has at least four distinct sounds:—1. The name or long sound, as in *bake*, *bake*, *nation*. 2. The Italian sound, as in *far*, *farmer*, *father*. 3. The German or broad sound, as in *all*, *bald*, *halt*. 4. The shut or close sound, as in *man*, *amalgam*. The first three sounds, when unaccented, are merely shortened in quantity. The fourth sound, when unaccented, approximates in some instances to the sound of *u* or *e* in *better*, as in *mortar*, *dollar*, &c. In Grammar, A is usually denominated the indefinite article, because, when placed before a noun, it does not particularize. A before a vowel, or silent *h*, is changed into *an*, as, *an* agreement, *an* heir; but it is not so altered before *u* long, as that letter has the power of the consonant *y* in *you*. It is placed before a participle or a participial noun, as, *he is gone a* hunting. When prefixed to many or few, A sometimes implies a whole number, or an aggregate of few or many taken collectively. As a prefix in words from the Greek, it is generally privative, as, *achromatic* without colour; in which use, as well as when an article, it takes *a* between it and the following vowel. In Pharmacy, *A.* or *A. A.*, abbreviations of the Greek *ana*, signify *each, separately*, or that things mentioned should be taken in quantities of the same measure. *A. A. A.*, in Chemistry, stand for amalgam, or amalgamation. In Commerce, *A.* stands for *accepted*. *A.*, in Music, is the nominal of the sixth note in the natural diatonic scale, called by Guido *la*. In Burlesque Poetry, *A* is sometimes used to lengthen out a syllable without adding to the sense.

For cloves and nutmegs to the line-a,  
And even for oranges from China.—Dryden.

## AAM—ABACISCUS.

*A*, among the ancients, stood as a numeral for 500, and with a dash over it,  $\overline{A}$ , for 5000. In the Hebrew, Syriac, Chaldee, and Samaritan, it denotes one, or unity. In the Julian Calendar, *A* is the first of the seven dominical letters. Among Logicians, *A.*, as an abbreviation, stands for a universal affirmative proposition. *A.* asserts, and *E.* denies: thus, in *barbara*, *A*, thrice repeated, denotes so many of the propositions to be universal. Among the Romans, *A.* was used to signify a negative or dissent. *A.* stands for *anteguo*, I oppose or object to the proposed law. In criminal trials, *A.* stood for *absolvo*, I acquit. *A. D.* *anno domini*, the year of our Lord. *A. U. C.*, *anno urbe condita*, from the building of the city of Rome. *A. M.* *ante meridian*, before noon; or *artium magister*, master of arts. *A* has many significations in our old writers and in our provincial dialects, of which the following are some—*ah*, *he*, *they*, *all*, *on*, *have*, *one*, *always*, *yes*, *even*, &c.

**ACARI**, a-ka'ri, *s. pl.* (Greek; *akari*, a mite.) Those small arachnoid, or spider-like animals, which have a single-jointed chalice or pincer, resembling an antenna, or a suctorious mouth.—See Acarides.

**ACARIDES**, a-ka're-dis, *s.* (*akari*, a mite, Gr.) A subdivision of the Arachnides, comprehending the small spider-like animals called acari or mites, as well as water-mites and ticks.—See Acari.

**ACARNA**, a-kâr'na, *s.* (Greek.) A genus of plants allied to the Thistle tribe.

**ACARNAR**, a-kâr'nâr, *s.* A bright star of the first magnitude in the constellation Eridanus.

**ACARUS**, sing. of Acari.—Which see.

**ACASTA**, a-ka's'ta, *s.* A genus of cirripeds, having sessile, ovate, subconic, compressed shells, consisting of six parts, two of the valves small and four large, slightly united, with an orbicular plate internally concave at the base.

**ACATALECTIC**, a-kat-a-lek'tik, *s.* (*akatalektikos*, not defective at the end, Gr.) A verse having the entire number of syllables peculiar to the measure.

**ACATALEPSY**, a-kat'a-lep-se, *s.* (*a*, priv. and *katalepsis*, comprehension, Gr.) Incomprehensibility; impossibility of complete discovery.

**ACATALECTIC**, a-kat-a-lep'tik, *a.* Incomprehensible.

**ACATAPOSIS**, a-kat-a-po'sis, *s.* (*a*, priv. and *kataposis*, deglutition, Gr.) Inability to swallow.

**ACATER**, a-ka'târ, *s.* (*accattare*, to beg or borrow, Ital.) A provider or purchaser of provisions.—Obsolete.

A gentel manciple was ther of a temple,  
Of which *achetours* might take ensample.  
For to ben wise in buying of vitale.—Chaucer.

**ACATES**, a-ka-yts', *s.* (*acheter*, to purchase, pronounced *acater* in Picardy and Languedoc, old Fr.) Provisions; viands. In more modern language—*cateas*.—Obsolete.

The kitchen clerk that hight digestion,  
Did order all the *acates* in seemly wize.—Spenser.

**ACATHARSIA**, a-ka-thâr'she-a, *s.* (*akatharsia*, uncleanness, Gr.) In Surgery, the filth or impure fluid or sordes issuing from sores; impurity.

**ACATIUM**, a-ka'shum, *s.* In Antiquity, a kind of military boat or pinnace wrought by oars.

**ACATRY**, a-ka'tre, *s.* The room or place allotted to the keeping of ale and such provisions as the purveyors purchased for the king.—Halliwell.

**ACAULINE**, a-kaw'line, } *a.* (*a*, priv. and *kaulos*, a stem, Gr.) In Botany, without a caulis; applied to plants whose leaves spring directly from the root, as those of the primrose, hyacinth, and crocus.

**ACAWERIA**, a-ka-we're-a, *s.* The name given in Ceylon to the bitter root of the plant Ophioxylon serpentinum, a supposed antidote to the poisonous bite of a serpent.

**ACCEDE**, ak-sede', *v. a.* (*accedo*; *ad* and *cedo*, to yield or give place, Lat.) To agree or assent to; to become a party to, by agreeing to the terms of a treaty or convention. *Accedas ad curium*, in Law, a writ which removes a plaint from an inferior to a higher court.

**ACCELERATE**, ak-sel'er-ate, *v. a.* (*accelero*; *ad* and *celero*, I hasten, Lat.) To cause to move faster:

## ACCELERATED—ACCENT.

to hasten; to add to velocity; to add to natural or ordinary progression.

**ACCELERATED**, ak-sel'er-ay-ted, *a.* Hastened; quickened. *Accelerated motion*, a rapidity of motion constantly increasing. The velocity of a falling body increases each second in the arithmetical motion, 1, 3, 5, 7, 9, and the whole space passed over in the geometrical ratio of squares, 1, 4, 9, 16, &c. *Accelerated force*, the increase which a body exerts in consequence of its increased motion.

**ACCELERATION**, ak-sel'er-a'shun, *s.* The act of causing to move faster; the state of moving faster. In Mechanics, *acceleration of motion* is the continual accession of velocity which a falling body acquires. In Music, quickening the time in the middle of a piece. In Military tactics, to carry a breach under the works of a fortified place, in order to take it by prompt assault. *Acceleration of the moon*, the increase of the moon's mean motion from the sun, compared with the diurnal motion of the earth; the moon moving with greater velocity than it did in ancient times—a discovery made by Dr. Halley. *Diurnal acceleration of the fixed stars*, is the time by which they anticipate the mean diurnal revolution of the sun, which is nearly 53 minutes 56 seconds. *Acceleration of a planet* is when its real diameter exceeds its mean diurnal motion.

**ACCELERATIVE**, ak-sel'er-a-tiv, } *a.* Increasing velocity; quickening progression.

**ACCELERATORY**, ak-sel'er-a-tur-e, } *a.* Increasing velocity; quickening progression.

**ACCELERATOR**, ak-sel'er-ay-tur, *s.* A muscle which, by its contraction, accelerates the discharge of urine, &c.; one of the pairs of muscles called *Acceleratores urinæ*.

**ACCEND**, ak-sen'd, *v. a.* (*accendo*; *ad* and *candeo*, *cineo*, I am white, from *canus*, white, Lat.) To set on fire; to kindle.

Our devotion, if sufficiently *accended*, would, as theirs, burn up innumerable books of this sort.—*Deity of Poetry*.

**ACCENDIBILITY**, ak-sen'd-e-bil'e-ty, *s.* The capacity of being ignited, kindled, or inflamed.

**ACCENDIBLE**, ak-sen'd-e-bl, *a.* Capable of being inflamed or kindled.

**ACCENDONES**, ak-sen'do-nis, } *s.* In Roman Antiquity, a kind of assistant gladiators, whose office was to excite and animate the combatants.

**ACCENSI**, ak-sen'si, *s.* In Antiquity, supernumerary soldiers taken from the fifth class of Roman citizens as a kind of reserved force; also, an inferior order of officers, attendant on the Roman magistrates, as ushers, sergeants, &c.

**ACCENT**, ak-sent, *s.* (*accentus*, from *cano*, *cantum*, to sing, Lat.) The modulation of the voice, or manner of speaking or pronouncing with regard to force or eloquence;

I know, sir, I am no flatterer; he that beguileth you in a plain accent was a plain man; which, for my part, I will not be.—*Shaks.*

the particular stress or force laid upon a syllable; accent in this sense is primary or secondary—it is preter or less, as in the word *ac-la-ma'shun*, *ma* being the primary, *ac* the secondary. When an accent is placed on a vowel, it has its long name sound, as in *re'cent*; when placed on a consonant preceded by a vowel, the vowel has its shut or short sound, as *mal'ice*; the mark of accentuation.

The Greeks, whom we have copied in this respect, used three accents—the acute, which raises the

Shall this our lofty scene be acted o'er  
In states unborn, and accents yet unknown.—*Shaks.*

a particular tone or inflection of voice in pronouncing sentences or words, as, an Irish, Scotch, or English accent; to write or mark the accentuation of words. In Music, a swelling of sounds for the purpose of variety or expression, or an enforcement of particular sounds by the voice or instruments where the emphasis falls. In common time, the first and third notes of a word are accented, and, in treble time, the first and last note. In Mathematics, accents are used to denote difference of quantities or magnitudes.

**ACCENT**, ak-sent', *v. a.* To pronounce with the proper accent; to alter a syllable with the proper force.

**ACCENTED**, ak-sent'ed, *part. a.* Uttered with accents; marked with accents.

**ACCENTION**, ak-sen'shun, *s.* (*accensio*, Lat.) The act of kindling; state of being kindled; ignition.

**ACCENTOR**, ak-sen'tur, *s.* In Music, one who takes the leading part. In Ornithology, the hedge-sparrow, a genus of birds belonging to the *Parinae*, or *Titmice*; Family, *Sylviade*.

**ACCENTUAL**, ak-sen'tu-al, *a.* Pertaining to accent, rhythmical.

**ACCENTUATE**, ak-sen'tu-ate, *v. a.* To mark words with the proper accents.

**ACCENTUATION**, ak-sen-tu-a'shun, *s.* The act of placing the accents in writing, or of pronouncing them in speaking.

**ACCEPT**, ak-sept', *v. a.* (*accepto*, from *accipio*; *ad* and *capio*, I take, Lat. *accepter*, Fr. *accepter*, Span.) To take or receive what is offered with an agreeable feeling; to receive with approbation or favour, as, he *accepted* the office made to him; to regard with partiality; to value or esteem;

It is not good to *accept* the person of the wicked.—*Prov. xviii.*

to consent or agree to, as, to *accept* a treaty; often followed by *of*, as, to *accept* of the terms proposed; to understand or receive in a particular sense.

The same epithet in several places *accepts* sundry interpretations.—*Fuller's Worthies.*

In Commerce, to agree or promise by signature, to pay when due, as in a bill of exchange. *Accepting service of process*, the agreement by the attorney or solicitor of a defendant, to accept or receive, on his client's behalf, such writ or process from the opposite party, as should have been served personally upon the defendant at the commencement of legal proceedings.

**ACCEPTABLE**, ak-sep'ta-bl, *a.* That may be received with agreeable feelings; grateful; pleasing; seasonable. This word is sometimes accented on the first syllable, as in the following passage:

This woman whom thou mad'st to be my help,  
And gave me as thy perfect gift, so good,  
So just, so acceptable, so divine,  
That from her hand I could expect no ill.—*Milton.*

## ACCEPTABILITY—ACCESS.

**ACCEPTABILITY**, ak-sept-a-bil'e-te, } *s.* The qua-  
**ACCEPTABLENESS**, ak'sept-a-bl-nes, } lity of being  
 agreeable to a receiver.—Acceptability is seldom  
 used.

He hath given us his natural blood to be shed for the  
 remission of our sins, and for obtaining the grace and the  
 acceptability of repentance.—*Bp. Taylor.*

**ACCEPTABLY**, ak-sep'ta-ble, *ad.* In an acceptable  
 manner; in a way which can be received.

Let us have grace whereby we may serve God *accept-*  
*ably*.—*Heb. xii.*

**ACCEPTANCE**, ak-sep'tans, *s.* Reception with satis-  
 faction or approbation;

Thus I embolden'd spake; and freedom won  
 Permissive, and acceptance found.—*Milton.*

Some men cannot be fools with so good acceptance as  
 others.—*South.*

acceptation or reception of the meaning in which a  
 word is understood—(not used in this sense.)  
*Acceptance in law*, the acceptance or taking any-  
 thing which a person is not bound to accept or  
 take, but which, when accepted or taken, becomes  
 binding in its operation and effects. *Acceptance*  
*for honour*, in Scottish law, the acceptance of a  
 bill after it has been protested against the drawee  
 for non-acceptance. *Acceptance of a bill*, an  
 engagement to pay a bill according to the tenor  
 of the acceptance, which may be either absolute or  
 qualified. An *absolute acceptance* is an engage-  
 ment to pay a bill according to its request, which  
 is done by the drawee writing *Accepted* on the  
 bill, and subscribing his name, or writing *Ac-*  
*cepted only*; or merely subscribing at the bottom  
 or across the bill. A *qualified acceptance* is when  
 a bill is accepted conditionally; as, when goods  
 conveyed to the drawee are sold, or when a navy  
 bill is paid or other future bill, which does not  
 bind the acceptor till the contingency has hap-  
 pened.—*Macculloch.* *Acceptance* also signifies  
 an agreeing to terms or proposals in commerce, by  
 which a bargain is concluded, and the parties  
 bound; likewise, an agreeing to the act or contract  
 of another, by some act which binds the person in  
 law, as a bishop taking rent reserved on a lease  
 by his predecessor is an acceptance in terms of the  
 lease. In Common Law, it denotes the accepting  
 or taking of one thing as a compensation for the  
 payment or performance of another. In Mer-  
 chandise, a bill of exchange accepted.

**ACCEPTATION**, ak-sep-ta'shun, *s.* Favourable re-  
 ception; state of being acceptable; favourable  
 regard or acceptableness—(the word more gene-  
 rally used in this sense); the meaning or sense  
 in which a word or expression is understood or  
 generally received; reception in general, whether  
 good or bad.—Not used in this sense.

**ACCEPTER**, } ak-sep'tur, *s.* One who accepts. An  
**ACCEPTOR**, } acceptor of a bill, the drawee or per-  
 son who, by his signing it, becomes bound to pay  
 it when due.

**ACCEPTILATION**, ak-sep-te-la'shun, *s.* (*acceptilatio*,  
*Lat.*) The remission of a debt without payment  
 of any consideration.

**ACCEPTION**, ak-sep'shun, *s.* The received sense of  
 a word; acceptance; state of being accepted.—  
 Obsolete.

**ACCEPTIVE**, ak-sep'tiv, *a.* Ready to accept.

The people are very *acceptive*, and apt to applaud any  
 meritable work.—*Ben Jonson.*

**ACCESS**, ak-ses', *s.* (*accessus*, *Lat.*) Approach or

## ACCESSARILY—ACCESSARY.

way by which any thing may be approached; the  
 means or liberty of approaching either to men or  
 things; admission; addition; increase; accession.  
 In Medicine, the assemblage of phenomena which  
 signalize the recurrence of periodical disease, as  
 intermittent fever, comprehending their cold, hot,  
 and sweating stages.

**ACCESSARILY**.—See Accessorily.

**ACCESSARINESS**.—See Accessoriness.

**ACCESSARY**.—See Accessory.

**ACCESSIBLE**, ak-ses'-se-bl, *a.* That may be ap-  
 proached or reached; approachable.

**ACCESSIBLY**, ak-ses'-e-ble, *ad.* So as to be accessible.

**ACCESSION**, ak-sesh'un, *s.* (*French*; *accessio*; *ad*,  
 and *cedo*, I go to, *Lat.*) A coming to; an ac-  
 ceding to or joining; a going to;

Besides, what wise objections he prepares,

Against my late *accessions* to the wars.—*Dryden.*

increase by something added; augmentation, as,  
 an *accession* of wealth. In Law, a mode of ac-  
 quiring property, either natural or artificial.  
*Natural accession* is the young of cattle belonging  
 to the mother, and the produce of the earth to the  
 owner of the soil. *Artificial accession* is that  
 addition which is the result of human industry,  
 called likewise *industrial accession*, as trees planted,  
 or a house built on the property of another, which be-  
 longs to the proprietor of the ground, and not to the  
 planter or builder. *Deed of accession*, in Scottish  
 Law, a deed by the creditors of a bankrupt or in-  
 solvent debtor, by which they approve of a trust  
 executed by their debtor for the general behoof,  
 and bind themselves to concur in the fiduciary  
 arrangement proposed for extricating his affairs.—  
*Bell.* The act of arriving at a throne, office, or  
 dignity; the invasion of a fit of periodical disease  
 or fever.

**ACCESSIONAL**, ak-sesh'un-al, *a.* Additional.

**ACCESSORIAL**, ak-ses-so're-al, *a.* Pertaining to an  
 accessory.

**ACCESSORILY**, ak'ses-sor-e-le, *ad.* In the manner  
 of an accessory; by subordinate means, or in a  
 secondary character; not as a principal, but a  
 subordinate agent.

**ACCESSORINESS**, ak'ses-sor-e-nes, *s.* The state of  
 being accessory; or of being or acting in a sec-  
 ondary character.

**ACCESSORY**, } ak'ses-sor-e, *a.* (*accessorius*, from  
**ACCESSARY**, } *accedo*, *accessus*, *Lat.*) Acceding;  
 contributing; aiding in producing some effect or  
 acting in subordination to the principal agent;  
 usually in a bad sense, as, *accessory* to felony;  
 aiding in certain acts, or in a secondary manner,  
 as, *accessory* to music. In Law, a person guilty of  
 a felony, not by committing the crime in person or  
 as a principal, but by advising, commending, or  
 otherwise inciting another to its commission. In  
 Treason, there are no accessories. An *accessory*  
*before the fact*, is one who counsels or commands  
 another to commit a felony; *after the fact*, the  
 one who receives and conceals the offender. In  
 common language, that which accedes to some-  
 thing else, as its principal. In Scottish Law, an  
*accessory action* is one in some degree subservient  
 to others, as those of *wakening* or *transference*.  
*Accessory obligations*, in the same law, obligations  
 adjoined to antecedent or primary obligations, as  
 cautionary obligations and bonds of corroboration,  
 and the regular payment of interest. Among  
 Painters, *accessories* are the ornamental parts

of a picture, as vases, armour, &c. In the Fine Arts, anything introduced into a work that is not essential to the main design. *Accessory nerves*, in Anatomy, a pair of nerves, which, rising from the medulla in the vertebrae, ascend and enter the skull; then passing out with the *par vagans*, are distributed into the muscles of the neck and shoulders.

ACCESSUS, ak-ses'sus, *s.* (Latin.) In Antiquity, a climbing machine for ascending the walls of besieged places.

ACCIACCATURA, ak-se-a-ka-tū'ra, *s.* (Italian.) In Music, a term denoting the putting down, along with any interval, the half note below it, and instantly taking off the finger which has struck the lowest of the two notes, continuing the sound of the other note till the harmony is changed.

ACCIDENCE, ak'se-dens, *s.* (See Accident.) A small book containing the rudiments of grammar, and explaining the properties of the parts of speech.

ACCIDENT, ak'se-dent, *s.* (*accidens*, falling, from *ad* and *cado*, I fall, Lat.) Literally, a falling or coming; an event which takes place without being foreseen or expected; a casualty; a contingency; chance. In Grammar, something belonging to a word, but not essential to it, as gender, number, inflection. In Heraldry, a point or mark, not essential to a coat of arms. In Logic, a property or quality of a thing which is not essential to it, as whiteness, sweetness, softness, clothes. In Metaphysics, accidents are distinguished into primary and secondary. Primary accidents are such as are absolute, as quantity and quality.

ACCIDENTAL, ak-se-den'tal, *a.* (French.) Casual; fortuitous; happening by chance; having the quality of an accident; non-essential. In Morbid Anatomy, the term is applied to all structures developed, as the consequences of a morbid process; — *a.* property which is non-essential. *Accidental colours*, colours depending on the light of the eye, and not belonging to light itself, or to any quality of the luminous object. *Accidental point*, in Perspective, that point in which a right line, drawn from the eye parallel to another right line, cuts the picture or plane.

ACCIDENTALS, ak-se-den'tals, *s. pl.* In Painting, fortuitous or chance effects produced from rays of light falling on certain objects, by which they are brought into stronger light than they otherwise would be. *Accidentals*, in Music, are those flats and sharps which are prefixed to the notes in a movement, and which would not be considered so by the sharps and flats in the signature.

ACCIDENTALLY, ak-se-den'tal-le, *ad.* Casually; fortuitously.

# ACEPHALA—ACERINEÆ.

bribe which Judas took for betraying his master, and therefore called the field of blood.

No mystery but that of love divine,  
Which lifts us on the seraph's flaming wing,  
From earth's *aceldama*, this field of blood,  
Of inward anguish, and of outward woe.—*Young.*

**ACEPHALA**, a-sef'a-la, *s.* (*a*, privative, and *kephale*, the head, Gr.) Headless animals. An order of Mollusca, comprehending all the inhabitants of bivalve shells, and some of the multi-valves, as well as others which have no shells. They form two sections—the *A. Testacea*, those which have shells, and the *A. Nuda*, or naked, which have no shells. Also an order of insects.

**ACEPHALISM**, a-sef'a-lizm, *s.* The condition of a fetus without a head.

**ACEPHALI**, a-sef'a-li, *s.* In English History, a name given in the reign of Henry I. to a sect of levellers, because they were not believed to possess even a tenement to entitle them to have the right of acknowledging a superior lord. In our ancient law books, the term is used for persons who held nothing in fee. In Ecclesiastical History, the name appears to have been first applied to the persons who refused to follow either John of Antioch or St. Cyril, in a dispute which happened in the council of Ephesus, in 431. The name was also given to those bishops who were exempted from the jurisdiction and discipline of their patriarch. They were generally Eutychians, or persons who believed that Christ had only one nature.

**ACEPHALOBACH**, a-sef'a-lo-brak, *s.* (*a*, *kephale*, and *brachion*, an arm, Gr.) A fetus without head and arms.

**ACEPHALOCHIRUS**, a-sef'a-lo-ki-rus, *s.* (*a*, *kephale*, and *cheir*, the hand, Gr.) A fetus without head and hands.

**ACEPHALOCYSTIS**, } a-sef'a-lo-sist-, *s.* (*a*, privative,  
**ACEPHALOCYSTS**, } *kephale*, a head, and *kystis*,  
a bladder, Gr.) A genus of Entozoa, or intestinal animal, consisting of a simple bladder, without heads, or other visible organs; formerly included, with certain others, under the name Hyatides, in the genus *Tenia* of Linnæus. The condition of animal life in the *Acephalocysts* are so obscure that many naturalists have regarded it only as a particular mode of organic alteration, and, consequently, destitute of animal vitality.

**ACEPHALOUS**, a-sef'a-lus, *a.* Without a head.

**ACER**, a'ser, *s.* (Latin, sharp, from the wood having been formerly manufactured into heads of pikes and other weapons.) The Maple, a genus of plants. The *A. Pseudo-platanus*, the Plane-tree of Scotland, and called Sycamore in England, is the only British species. *A. saccharinum*, a native of North America, yields sugar from its sap, of which an ordinary tree, in a good season, gives from 20 to 30 gallons, affording 5 or 6 lbs. of granulated sugar: Type of the order *Aceræ*.

**ACERACEÆ**, as-er-a'se-e, } *s.* (*acer*, one of the  
**ACERINEÆ**, a-se-rin'-e-e, } genera.) A natural order of monopetalous Exogens, allied to the *Tiliaceæ* or *Lindens*; the flowers are unsymmetrical, stamens hypogynous, and inserted upon a disk; fruit winged; pistils two-lobed and winged behind; style one; stignas two; the species are all trees or shrubs, with opposite stalked exstipulate leaves. The sap of most of the species yields a saccharine substance, of which sugar is manufactured in North America.

## ACERANS—ACETIC ACID.

ACERANS, a'ser-ans, } *s.* (*a*, privative, and *keras*, a  
ACERA, a'ser-a, } horn, Gr.) A family of in-

salads, such as lettuce, mustard, cress, &c.

ACETARY, as'e-ta-re, *s.* An acid pulpy substance in  
certain fruits, as the pear, inclosed in a congeries  
of small calculeous bodies towards the base of the  
fruit.

ACETAS, a-se'tas, *s.* In Pharmacy, an acetate, a  
salt formed by the union of acetic acid with an  
alkaline or metallic base. The following are used  
in medicine:—A. Ammoniae, acetate of ammonia;  
A. Cupri, acetate of copper; A. Morphii, acetate  
of morphia; A. Barytae, acetate of barytes; A.  
Soda, acetate of soda; A. Ferri, acetate of  
iron; A. Hydrargyri, acetate of mercury; A.  
Plumbi, acetate of lead; A. Potassae, acetate of  
potash.

ACETATE, as'e-tate, *s.*—See *Acetas*.

ACETATED, as'e-tay-ted, *a.* Combined with acetic  
acid.

ACETIC ACID, a-set'ik as'sid, *s.* Concentrated vine-

making acid or sour; the operation of making  
vinegar.

ACETIFY, a-set'e-fi, *v. a.* To convert into acid or  
vinegar.

ACETITE, as'e-tite, *s.* A salt supposed to be formed  
with an acid, containing the same proportions of  
carbon and hydrogen as the acetic acid, but with  
less oxygen. As, however, there is no such acid,  
the term *acetite* is not now used.

ACETOMETER, a-se-tom'e-tur, *s.* (*acetum*, vinegar,  
Lat. and *metron*, a measure, Gr.) An instrument  
for ascertaining the strength of acids.

ACETOSE, a-se-tose', *a.* (*aceteur*, Fr.) Having a  
sharp sour taste.

mammary or pap, Gr.) A fabulous nation of female  
warriors, represented by ancient historians as of  
Scythian origin, and settling near the river Ther-  
modon, in Cappadocia. In a war which ensued,  
the males became almost exterminated; the  
women then took up arms, and resolving to live  
in future without men, put the remaining males  
to death. The name is given from their having  
been said to cut off or sear the right breast, that it  
might not interfere with the free use of the arm:  
or, according to others, from *amazosas*, 'females  
living together.' Alvarez, who visited Abyssinia  
in 1520, mentions a race of Amazons who were  
warlike, had their left breast destroyed when  
young, were governed by a queen, and fought  
with bows and arrows, mounted on bullocks.

**AIDLESS**, ade'les, *a.* Friendless; helpless; unsupported.

**AIDS**, aydz, *s.* In Horsemanship, cherishings to avoid unnecessary correction; the inner aids are inner heel, leg, and rein, and the outer aids the outer heel, leg, and rein, &c.

**AIEL**, a'yel, *s.* In Law, a writ which lies where a person's grandfather or great-grandfather was seized of lands, &c., in fee-simple, the day that he died, and a stranger abates and enters the same day and dispossesses the heir of his inheritance.

**AIGRE**, a'ger, *s.* The impetuous flowing of the sea.

**AIGREMORE**, a'gre-more, *s.* A name given to charcoal when in a state fit to be mixed with the other materials in the making of gunpowder.

**AIGRET**, a'gret, *s.* (*aigrette*, Fr.) The Egret or Heron.

**AIGUISCE**, a'gwis, *s.* In Heraldry, a cross with four ends sharpened into obtuse angles.

**AIGULET**, a'gu-let, *s.* (*aiguillete*.) A point or tag at the end of a fringe.

**AIKENLE**, ay-ken'e-e, *s.* (in honour of Arthur Aiken, F.L.S.) A genus of Asiatic plants, with small blue flowers: Order, Gesneriaceae.

**AIKRAW**, ake'raw, *s.* A popular name of a species of moss or lichen.

**AII**, ale, *v. a.* (*elan*, *eglan*, Sax.) To pain; to trouble; to give pain; to affect in any manner;—*v. n.* to feel pain; to be incommoded;—*s.* a disease.

**AILANTUS**, ay-lan'tus, *s.* (*ailanto*, tree of heaven, Sansc.) A genus of trees, of lofty growth, from China and the East Indies: Order, Terebinthaceae.

# AILING—AIR.

**AILING**, aile'ing, *part. a.* Sickly; full of complaints.

**AILEMENT**, aile'ment, *s.* Pain; disease.

**AILURUS**, ay-lu'rus, *s.* (*ailouros*, a cat, Gr.) The Panda, a carnivorous animal, allied to the racoon, about the size of a large cat, with a soft and thickly-set brilliant red fur.

**AIM**, ame, *v. n.* (*esmer*, to point at, old Fr.) To endeavour to strike with a missive weapon; to point the view, or direct the steps towards anything; to tend towards; to endeavour to reach or obtain;—*v. n.* to direct the missive weapon;—*s.* the direction of a missile weapon; the point to which anything thrown is directed; figuratively, a purpose; a scheme; a direction; a design; the object of a design; the point intended; a guess; a conjecture.

**AIMER**, a'mur, *s.* One who aims at anything.

**AIMLESS**, ame'les, *a.* Without aim.

**AIMLESSLY**, ame'les-le, *ad.* Without aim.

**AIMOPHILA**, ay-mof'e-la, *s.* (*aimos*, a thicket, and *philos*, a lover, Gr.) A genus of American ground-finches allied to the sparrow: Family, Fringillidæ.

**AIR**, ayr, *s.* (*aer*, Gr.) An invisible, transparent, colourless, inodorous, and tasteless fluid, surrounding the earth, and essential to the support of animal and vegetable life. It is 816 times lighter than its bulk of water; 1000 cubic inches at the ordinary temperature and pressure weighing 305 grains. It consists of about 80 parts, in bulk, of nitrogen, and 20 parts of oxygen, and about one-thousandth part of carbonic acid. Air, when inhaled into the lungs, unites with the carbon of the blood, and forms carbonic acid, a process which produces the heat necessary to sustain the proper temperature of the animal system;—a gentle wind; scent; vapour; anything light and uncertain; the open, unconfined atmosphere; vent; utterance; emission into the air; publication; intelligence; information; music, whether light or serious; sound; poetry; a song; an affected or laboured manner of gesture; appearance; mein: look. In Horsemanship, *airs* denote the artifices or practised motion of a trained horse. In Music, the treble part of a composition, which in vocal music consists of the treble, counter, tenor, and bass. In Painting, the medium in nature through which every object is viewed, and hence to be transferred to the picture or canvas. *Air-balloon*, a balloon inflated with gas, in distinction from a fire-balloon, which ascends through the rarefaction of the air contained in it by the application of heat. *Air-bed*, a bag of the size of a bed, divided into several compartments, and rendered air-tight: *air-cushion* and *air-pillow* is used in the same sense. *Air-bladder*, the air-bag, sound, or swim, in fishes, which they have the power of compressing and dilating at pleasure, as they require to sink or ascend; any cuticle or vesicle filled with air in plants—more properly termed *air-cells*. *Air-born*, born of the air.

See the *air-born* racers start,  
Impatient of the rein.—*Congreve*.

*Air-borne*, borne by the air. *Air-braving*, braving the winds. *Air-built*, built in air; without any solid foundation. *Air-cells*, in Botany, cavities in the stems and leaves of certain algae, &c., which render them buoyant in water. In Zoology, membranous receptacles in birds, communicating with the lungs, and reaching through the various parts of the body, by which their specific gravity

is diminished, and they are rendered fitter for flight; air-cells answering the same purpose occur in flying insects. *Air-condenser*, an apparatus for condensing air. It consists of a close vessel with a syringe attached to it. By means of the syringe, air is injected into the vessel till the requisite degree of condensation is attained. *Air-drain*, a cavity formed round the external walls of a building to prevent the earth from lying against them, and causing dampness. Drawn or painted in the air.

This is the *air-drawn dagger*, which, you said,  
Led you to Duncan.—*Shaks.*

*Air-embroidered*, enveloped in air. *Air-escape*, a contrivance for letting off the air from water-pipes. When these are laid upon rising ground, the air often collects in the higher part, and obstructs the progress of the water. To remedy this, a hollow ball is attached to the upper part of the pipe, in which a ball-cock is placed, and adjusted in such a way, that when air collects in the pipes, it ascends in the vessel, opens the cock, and allows the air to escape. *Air-flue*, a tube in which heated air is made to pass rapidly from a stove to heat apartments. *Air-fountain*, a contrivance for producing a jet of water by the elastic force of air compressed in a close vessel, and made to act on the surface of the water to be raised. *Air-gun*, a pneumatic instrument, so constructed as to propel bullets with immense force by means of condensed air. *Air-hole*, a hole to admit air. *Air-holder*, an instrument for holding air for the purpose of counteracting the pressure of a decreasing column of mercury. *Air-jacket*, a leather jacket to which are fastened bags or bladders filled with air, to render the body buoyant in water. *Air-lamp*, a pneumatic machine, formed by the combination of inflammable air and electricity, which, by turning a stopcock, produces a flame that may be restrained or continued at pleasure. *Air-motive engine*, a locomotive-engine propelled by air, rendered expansive by the force of heat. *Air-pipe*, a pipe used in extracting or communicating air. *Air-piston*, or *electric cannon*, an instrument consisting of a brass tube, in the end or side of which a glass or ivory tube is inserted, with a bent wire passing through the tube, so that when a spark is taken on the wire from an electric machine, the fluid may pass in a spark from the point of the wire which is within the tube; if, therefore, it be filled with hydrogen and corked up, a spark will inflame the hydrogen and explosion ensue. *Air-plants*, orchideous plants which live for many months suspended in the air. *Air-pressure engine*, an engine on which the pressure of air of different densities is employed as a moving force. *Air-pump*, a machine for extracting the air and producing a vacuum. *Air-sacs*, in Zoology, same as *air-cells*—(see above.) *Air-stove*, a stove which is employed to heat a current of air directed against its surface by means of pipes in which heated air is introduced. *Air-shaft*, a passage for admitting the air into mines and subterranean places. *Air-stirring*, putting the air in motion. *Air-thermometer*, one which indicates changes of temperature by air contained in a bulb and tube. *Air-threatening*, threatening the air.

As from *air-threatening tops* of cedars tall.—

*Air. for Mag.*

*Air-tight*, impervious to the air. *Air-trap*, an

opening for the escape of air from drains, sewers, or pipes. *Air-trunk*, a contrivance to prevent the stagnation of putrid effluvia in jails or apartments where many people are collected. It is an open tube passing from the ceiling to the open air, above the roof, by which the heated or foul air escapes. *Air-valve*, a valve belonging to a steam-boiler, the intention of which is to supply air to the boiler, if, by a sudden cooling of the water, letting off the steam, or other cause, the boiler should have a vacuum formed within it, in which case the atmospheric pressure from without, might, and occasionally does, press together both sides of the boiler. *Air-vessel*, in Botany, a spiral vessel or duct in plants, containing air, and supposed to answer the same purpose in vegetable, as lungs do in the animal system. In Hydraulics, a vessel forming part of a forcing pump, or other similar hydraulic machine, intended, by the elasticity of the compressed air within, to keep up the stream of water, while the action of the pump is making the return service;—*v. a.* to expose to the air; to give access to the open air; to show in an open manner;

You do us, Prince, he said,  
*Airing* a snowy hand and signet gem,  
All honour.—*Alfred Tennyson.*

to ventilate, as, to *air* a room; to expose to heat. *AIRA*, *a'ra*, *s.* (the Greek name of the plant *Lolium temulentum*, or Bearded Darnel, supposed to be from *aíreo*, I destroy, Gr.) Hair-grass, a genus of plants: Order, Graminaceæ.

*AIRER*, *ay'rur*, *s.* One who exposes to the air.

*AIRINESS*, *ayr'e-nes*, *s.* Openness; exposure to the air; lightness; gaiety; levity.

*AIRING*, *ayr'ing*, *s.* A short excursion to enjoy the air; exposure to the air.

*AIRLESS*, *ayr'les*, *a.* Destitute of fresh air, or communication with the air.

*AIRLING*, *ayr'ling*, *s.* A young, thoughtless, gay person.

Some more there be, slight *airlings*, will be won with dogs and horses.—*Ben Jonson.*

*AIROPSIS*, *ayr-op'sis*, *s.* (*aira*, hair, and *opsis*, like, Gr.) A genus of plants: Order, Graminaceæ.

*AIRPOISE*, *ayr'poys*, *s.* Any instrument used in weighing the air.

*AIRS*, *ayrz*, *s.* In Horsemanship, the artificial motions of taught horses, as the demivolt, curvet, &c.

*AIRY*, *ayr'e*, *a.* Composed of air; relating to the air; belonging to the air; high in air; open to the free air; light as air; thin; unsubstantial; without solidity; wanting reality; vain; trifling; fluttering; loose; full of levity; gay; sprightly; full of mirth; vivacious; lively; spirited; light of heart. *Airy-flying*, flying like air.

From which with *airy-flying* fingers light.—*Thomson.*

*Airy-light*, light as air. Milton writes it *aery-light*.

His sleep was *aery-light* from pure dejection bred.

*AISLE*, *ile*, *s.* (*ala*, wings, Lat.) The wings, inward side, or portico of a church; the inward lateral corridors which enclose the choir, the presbytery, and the body of the church along its sides.

*AISLED*, *ilde*, *a.* Furnished with aisles, as a three or five-aisled church.

*AIT* or *EYGH*, *ate*, *s.* (supposed to be a corruption of islet.) A small island in a river.

*AITONIA*, *ay-to-ne-a*, *s.* (after W. Ayton.) An ever-

AMPHICARPA—AMPHISCENA.

- and *kanthos*, a spine, Gr.) A genus of spiny-finned fishes of the family Centronotinae, or spine-backs.—See *Siganus*.
- AMPHICARPA**, am-fe-kár'pa, *s.* (*amphi*, and *karpós*, fruit, Gr.) A genus of North American climbing papilionaceous plants: Order, Leguminosæ.
- AMPHICHTHYS**, am-fík'this, *s.* (*amphi*, doubtful, and *ichthys*, a fish, Gr.) A genus of the Blenny-bull-head fishes (*Batrachideæ*), having no visible scales.
- AMPHICTYON**, Council of, am-fík'tyon, *s.* A celebrated council, consisting of a general assembly of the deputies of the Grecian States, which met twice a year at Athens, established by Amphictyon, third king of Athens, A.M. 2448.
- AMPHIDESMA**, am-fe-des'ma, *s.* (*amphi*, and *desmos*, a ligament, Gr.) A genus of marine bivalve shells belonging to the Tellina family, resembling Lucina in shape, having a cartilage between the cardinal teeth, with an external ligament.
- AMPHIDROMIA**, am-fe-dró'me-a, *s.* (*amphi*, round, and *dromas*, running, Gr.) Festivals kept by the Athenians on the fifth day after the birth of a child. One of the ceremonies consisted of running round the fire with the child, and presenting it to their household gods—hence the name.
- AMPHIGAMOUS**, am-fe-gá'mus, *a.* (*amphi*, doubtful, and *gamos*, marriage, Gr.) Applied to the Agamæ, or such plants as have no visible organs of fructification.
- AMPHIGENE**, am'fe-jene, *s.* (*amphi*, and *genos*, genus, Gr.) Vesuvian, idiocrose, or pyramidal garnet, a mineral found in the lavas of Vesuvius and other volcanic rocks, composed of silica, 35.5; lime, 33; alumina, 22.2; oxide of iron, 7.50; oxide of manganese, 0.20. The primitive form of the crystal is nearly that of a cube, rather harder than quartz, and of different shades of green, brown, and red.
- AMPHIOLOGY**, am-fí'o-je, *s.* (*amphi*, and *logos*, a discourse, Gr.) Doubtful expression.
- AMPHIMERINA**, am-fe-mer'e-na, *s.* (*amphi*, and *emera*, a day, Gr.) A quotidian or daily ague.
- AMPHINEUSTS**, am'fe-newsts, *s.* (*amphi*, and *pneo*, I breathe, Gr.) A name given by Merrem to a tribe of reptiles which are furnished with both lungs and gills.—See Amphibia.
- AMPHIOXUS**, am'fe-oks-us, *s.* (*amphi*, and *oxus*, acute or swift, Gr.) A genus of lamprey eels, having neither pectoral, dorsal, nor ventral fins.
- AMPHIPODS**, am'fe-pods, *s.* (*amphi*, and *pous*, a foot, Gr.) Fin-footed animals; an order of Crustaceæ, with the feet situated under the tail, and having sessile eyes.
- AMPHIPOGON**, am-fe-po'gon, *s.* (*amphi*, about, and *pogon*, a beard, Gr.) A genus of Australian grasses.
- AMPHIPRION**, am-fe-prí'on, *s.* (*amphi*, double, and *príon*, a saw, Gr.) A genus of spiny-finned fishes, belonging to the Chaetodon family, having both the operculum and preoperculum (cheek plates) very strongly and remarkably serrated at their edges.
- AMPHIPROSTYLE**, am-fe-pros'tile, *s.* (*amphi*, double, *pro*, before, and *stylos*, a column, Gr.) Applied to a temple which has a portico both in the front and behind, but is without columns at the sides.
- AMPHISCENA**, am-fis-be'na, *s.* (*amphis*, on both sides, and *bainein*, to walk, Gr.) A genus of insectivorous, oviparous, innoxious serpents, in which the body is nearly of the same thickness through-

AMPHISCIANS—AMPLEXICAUL.

- out, and furnished with numerous rings of small square scales; supposed to have the power of walking either backwards or forwards, and, by the ancients, to have two heads.
- AMPHISCIANS**, am-fish'ans, *s.* (*amphi*, both, and *skia*, shadow, Gr.) A term applied formerly to those inhabitants of the tropics, whose shadows fall in opposite directions at the opposite seasons of the year.
- AMPHISPORIUM**, am-fe-spo're-um, *s.* (*amphi*, double, and *spora*, a seed.) A genus of fungi, with naked sporules of two kinds.
- AMPHITHEATRAL**, am-fe-the'a-tral, *a.* Like an amphitheatre.
- AMPHITHEATRE**, am-fe-the'a-tur, *s.* (*amphitheatron*, Gr.) A building of a circular or oval form, having its arena encompassed with rows of seats, rising gradually one above the other, and porticoes. The exhibitions generally consisted of combats of gladiators, wild beasts, mock sea-fights, &c. The colosseum of Vespasian and Titus was seated to contain 85,000 spectators. The name is sometimes given to a circus in modern times, and, in gardening, to an elevated terrace, having steps descending to a series of terraces, formed on the side of a rising ground.
- AMPHITHEATRICAL**, am-fe-the-at're-kal, *a.* Pertaining to an amphitheatre.
- AMPHITHEURIUM**, am-fe-the're-um, *s.* (*amphi*, doubtful, and *therion*, a wild beast, Gr.) A name given by Blainville to the fossil mammal of the Stone-field slate, formerly named the didelphys, now the thylacotherium, by Owen.—Which see.
- AMPHITRITE**, am'fe-trite, *s.* In Mythology, the wife of Neptune; a personification of the sea; also, a genus of tubicular annelides (worms inhabiting tube shells), of great beauty, furnished with a crown of short golden-coloured bristles; the shell is formed of sand, agglutinated together by the mucus exuded from the skin.
- AMPHITROPAL**, am'fe-tro-pal, *a.* (*amphi*, about, and *tropo*, I turn, Gr.) Applied, in Botany, to an embryo, when it is curved round the body of the seed or albumen.
- AMPHIUMA**, am-fe-u'ma, *s.* (*amphi*, and *umen*, a membrane, Gr.) A genus of eel-shaped animals, belonging to the Batrachia, or frog family, furnished with four short legs. In their infant state they have gills, which, in maturer life, are supplied by lungs.
- AMPHORA**, am'fo-ra, *s.* (Latin.) A two-handled measure used by the Romans for holding wine, oil, dried grapes, or olives. It continued forty-eight sextaries, or seven gallons one pint of English measure. In Sculpture and Ornamental Architecture, a two-hand vase, placed on sarcophagi, &c.
- AMPHORAL**, am'fo-ral, *s.* A name given, in decoration, to a vase shaped like an amphora.
- AMPHORIC RESONANCE**, am-for'ik res'o-nans, *s.* A sound of the chest like that which is produced by blowing into a decanter.
- AMPHOTIDES**, am-fo-tí-des, *s.* A kind of armour worn to defend the ears by the Roman athletes.
- AMPLE**, am'pl, *a.* (*amplus*, Lat.) Large; wide; extended; unlimited; without restriction; liberal; magnificent; splendid; diffusive.
- AMPLENESS**, am-pl'-nes, *s.* The quality of being ample; largeness; splendour.
- AMPLEXICAUL**, am-pleks'e-kawl, *a.* (*amplecto*, I embrace, and *caulis*, a stem, Lat.) Applied, in

# ALDERMAN—ALE.

**ALDERMAN**, awl'dur-man, *s.* (Sax.) An incorporated civil magistrate, equivalent to bailie in Scotland. *Alderman*, or *Ealdorman*, appears to have been a title of various offices of Saxon and British polity. It formed the second of rank of Saxon nobility, (*athling* being the first, and *thane* the lowest,) and was synonymous with our earl or count, though not always hereditary.

The *alderman* of the county, whom confusedly they call an earl, was in parallel equal with the bishop, and therefore both their estimations valued alike in the laws of Ethelstane, at eight hundred thymases.—*Spelman*.

The coin here alluded to was, according to the same authority, in value about 3s. sterling.

**ALDERMANITY**, awl'dur-man'e-te, *s.* The behaviour of an alderman.

Thou (London) canst draw forth thy forces, and fight dry  
The battles of thy *aldermanity*,  
Without the hazard of a drop of blood,  
More than the surfeits in thee that day stood.—  
*Underwood*.

**ALDERMANLIKE**, awl'dur-man-like, *a.* In the manner of an alderman.

**ALDERMANLY**, awl'dur-man-le, *ad.* Like an alderman; belonging to an alderman.

**ALDERMANSHIP**, awl'dur-man-ship, *s.* The office and dignity of an alderman.

He was dysecharged of his aldermanship, and dyscharged from all rule and counceyll of the cite.—*Fabian*.

**ALDERN**, awl'durn, *a.* Made of alder.

The *aldern* boats first plowed the ocean.—*May's Virgil*.

**ALDINE**, al'dine, *s.* An epithet applied to editions of the classics from the family of Aldus Mountius, the first of whom established his press at Venice about 1500.

**ALE**, ale, *s.* (*cale*, Sax. from *alod*, third person singular indicative of *alewe*, to kindle, to inflame; applied to strong beer from its heating quality.) A fermented liquor, made by infusing malt and hops in water. The name *ales* was given formerly to certain festivals; as bridal-ales, Whitsun-ales, lamb-ales, &c.; but the church-ales and clerk-ales, sometimes called the lesser church-ales, were among those authorized sports which, at the period of the Reformation, produced great contention between Archbishop Laud and the puritans.

From old records

Of antique proverbs, drawn from Whitson lords,  
And their authorities, at wakes and *ales*,  
With country precedents, and old wives' tales,  
We bring you now, to show what different things  
The cotes of clowns are from the courts of kings.—  
*Ben Jonson*.

*Ale-bench*, a bench in or before an ale-house.

The vulgar sort

Sit upon their *ale-bench* with their cups and cans.—  
*Sir J. Oldcastle*.

*Ale-berry*, a beverage made by boiling ale with sugar and sops of bread.

Their *ale-berries*, candles, possits.—*Beaumont*.

*Ale-brewer*, one whose profession is to brew ale  
*Ale-fed*, fed with ale. *Ale-hoof*, the Glechoma or ground ivy, a plant sometimes used in making beer. *Ale-house*, a public-house in which ale is sold. *Ale-knight*, a pot companion.—Obsolete. *Ale-gill*, a kind of medical liquor prepared from an infusion of ground ivy. *Ale-pole*, same as *Ale-stake*.

For the *ale-pole* doth but signifie that there is good ale in the house where the *ale-pole* standeth, and wyll tell him that he muste go near the house, and there he shall find the drink, and not stand sucking the *ale-pole* in vain.—*A Boke made by John Eryth*.

# ALEA—ALEMBROTH.

*Ale-shot*, a reckoning to be paid for ale. *Ale-silver*, a duty paid to the Lord Mayor of London by the sellers of ale within the city. *Ale-stake*, a stake set upon, or before, an ale-house by way of sign.—Old word.

Like a true *ale-stake*, he tells you where the best ale is.—*Comment on Chaucer's Miller's Tale*.

*Ale-taster*, an officer who in former times was appointed in every court-leet, and sworn to look to the assize and the goodness of the bread and ale or beer, within the precincts of the lordship.—*Cowel*. *Ale-vat*, the vat in which ale is fermented. *Ale-washed*, steeped or soaked in ale.—Obsolete.

Among foaming bottles and *ale-washed* wits.—*Shaks*.

*Ale-wife*, a woman who keeps an ale-house. In Ichthyology, a fish of the herring kind, a native of America—the *Clupea Serrata* of zoologists.

**ALEA**, a'le-a, *s.* (Latin.) A game of chance among the Romans; particularly, a game played like backgammon with dice.

**ALE-CONNER**, ale'kon-nur, *s.* An officer in former times whose duty it was to inspect the measures of public-houses in the city of London.

Head-borongs, tithing-men, and *ale-conners*, and sidesmen, are appointed, in the oaths incident to their offices, to be likewise charged to present the offences of drunkenness.—*Act of Pari.* 21 Jac. 1. chap. 7.

**ALECTO**, a-lek'to, *s.* (*a*, priv. and *lego*, I rest, Gr.)

In Mythology, one of the furies, described by Virgil as having her hair and her dark wings covered with wreathing snakes, whose poison she infuses into her victims, till she infests them with ungovernable rage. From Coeytus, a river of hell, she is called Coeytia Virgo.

**ALECTORIA**, a-lek-to're-a, *s.* (*alektor*, a cock, Gr.)

Cockstone, a stone to which great virtues were ascribed by the ancients, said to be found in the gall-bladder of the cock. In Botany, a genus of Lichens, occurring in long tufts.

**ALECTORIDÆ**, a-lek'to-re-de, *s.* (*alektor*, a cock, and *eidōs*, like, Gr.)

The Alectors, a family of large American gallinaceous birds, without spurs, and destitute of the rich colouring of the Asiatic and European races: Order, Cracidæ.

**ALECTOROMACHY**, a-lek-to-rom'a-ke, *s.* (*alektor*, a cock, and *mache*, a fight, Gr.) Cockfighting.

**ALECTOROLOPHUS**, al-lek-to-ro'lo-fus, *s.* (*alektor*, a cock, and *lophos*, a crest or cockscomb, Gr.)

The plant Cockscomb, or Yellow-rattle, a species of the Linnæan genus *Rhinanthus*: Order, Scrophulariaceæ.

**ALECTOROMANCY**, a-lek-to-rom'an-se, *s.* (*alektor*, a cock, and *manteia*, divination, Gr.)

An ancient mode of divination by means of a cock.

**ALEE**, a-lee', *ad.* (*at* and *lee*—see *Lee*.)

In Nautical language, opposite to the wind, that is, opposite to the side on which it strikes. The helm of a ship is said to be *alee* when pressed close to the lee side. *Helm alee*, or *luff alee*, an order to put the helm to the lee side. *Helm's alee*, that is, the helm is *alee*; a notice given as an order to cause the head sails to shake in the wind, with a view to bring the ship about.

**ALEGAR**, ale'gär, *s.* (*ale*, and *aigre*, sour, Fr.)

Vinegar made from sour ale.

**ALEGGE**, a-ledj', *v. n.* To allay; to lessen; to assuage.—Obsolete.

**ALEMBIC**, a-lem'bik, *s.* (*al*, and *ambixen*, a chemical vessel, Gr.)

A still used in chemical operations.

**ALEMBROTH**, a-lem'broth, *s.* The philosopher's

salt, or salt of wisdom of the old alchemists; a compound of the bichloride of mercury and sal ammoniac, from which the white precipitate of mercury is made.

**ALENGTH**, a-length', *ad.* At full length along; stretched along the ground.

**ALEPH**, al'ef, *s.* The name of the first letter of the Hebrew alphabet, corresponding with Alpha of the Greek.

**ALEPIDIA**, al-e-pid'e-a, *s.* (*a*, priv. and *lepis*, a scale, Gr.) A genus of plants: Order, Umbellaceæ.

**ALEPIDOTE**, a-lep'e-dote, *s.* (*a*, priv. and *lepis*, a scale, Gr.) Any fish whose skin is not covered with scales.

**ALEPIS**, al'e-pis, *s.* (*a*, priv. and *lepis*, a scale, Gr.)

A genus of fishes, with broad bodies and small heads; scaleless, except on the hinder part of the lateral line adjoining the caudal fin.

**ALEPISATRUS**, a-lep-e-saw'rus, *s.* (*a*, priv. *lepis*, a scale, and *saurus*, a saurian, Gr.) A genus of long, thin-bodied, abdominal Malacopterygious fishes: Family, Scomberidæ.

**ALEPOCEPHALUS**, a-lep-o-sef'a-lus, *s.* (*a*, priv. *lepis*, a scale, and *cephale*, the head, Gr.) A genus of abdominal Malacopterygious fishes, having the body covered with large scales, but having none on the head: Family, Esocæ or Flying-fish.

**ALEPITRUM**, al-e-pi'rum, *s.* (*aleios*, poor, and *pyros*, grain, Gr.) A genus of plants, natives of the South Sea Islands and New Holland; they are of no known use: Order, Desvauliaceæ.

**ALERT**, a-let', *a.* (*alerte*, Fr.) In a Military sense, as guard; watchful; vigilant; ready at a call.

In the common sense, brisk, pert, petulant, smart.

**ALETHOPTERIS**, a-le-thop'ter-is, *s.* A genus of fossil plants, of which there have been found 13 species—11 from the Palæozoic, and 2 from the Mesozoic strata of Britain.

**ALETHIS**, a-le'tris, *s.* (Greek, a miller's wife, in allusion to the powdery dust with which the whole plant appears to be covered.) A genus of North American plants: Order, Hemerocallidaceæ.

**ALEURISMA**, a-lu-ris'ma, *s.* (*aleuron*, flour, Gr.)

A genus of Fungi: Tribe, Ascomycetes.

**ALEURITIS**, al-u-ri'tes, *s.* (*aleuron*, flour, Gr.) A genus of plants, which have the appearance of being covered over with flour. A triloba furnishes the candle nuts of the South Sea Islanders, which yield them food, and, when strung together, a kind of torch: Order, Euphorbiaceæ.

**ALEURODENDRON**, al-u-ro-den'dron, *s.* (*aleuron*, flour, and *dendron*, a tree, Gr.) A genus of plants: Order, Byttneriaceæ.

**ALEUTIAN**, a-lu'shan, *a.* (*aleut*, a bold projecting rock.) An epithet applied to a chain of islands, extending from the promontory of Alaschka in North America, to Kamtschatka in Asiatic Russia.

**ALEXANDRA**, al-legz-an'dra, *s.* A genus of plants: Order, Chenopodiaceæ.

**ALEXANDERS**, al-legz-an'durz, *s.* (supposed to be a corruption of *olusatrum*, a black pot-herb.) Smyrnum, a genus of umbelliferous plants, two species of which, *S. olusatrum* and *perfolium*, are or may be cultivated as asparagus and salad plants.—See *Smyrnum*.

**ALEXANDRIAN**, al-legz-an'dre-an, *a.* Pertaining to the city of Alexandria in Egypt, as, the *Alexandrian* School, an academy instituted by Ptolemy, the son of Lagos, and supported by his successors; as also the famous *Alexandrian* Library, destroyed

by the Ottomans. It is said to have contained 700,000 volumes. *Alexandrian manuscript*, a very ancient Greek copy of the Old and New Testaments, with the Apocrypha, in 4 vols. 4to, preserved in the British Museum.

**ALEXANDRINA**, al-egz-an-dri'na, *s.* A genus of Leguminous plants: Suborder, Papilionaceæ.

**ALEXANDRINE**, al-legz-an'drin, *s.* A species of poetical measure, composed of twelve syllables; so named, from its having been first used in a French poem, called the *Alexandriad*;—*a.* relating to the verse so called.

A needless *Alexandrine* ends the song,  
That, like a wounded snake, drags its slow length along.

*Pope.*

**ALEXEPHARMIC**, a-lek-se-far'mik, } *a.* (*alezo*,

**ALEXEPHARMICAL**, a-lek-se-far'me-kal, } *I* repel, and *pharmakon*, poison, Gr.) That which possesses an antidote, or has the quality of expelling poison.

**ALEXEPHARMICS**, a-lek-se-far'miks, *s.* Antidotes to poisons.

**ALEXETERIC**, a-lek-se-ter'ik, } *a.* (*alezo*, Gr.)

**ALEXETERICAL**, a-lek-se-ter'e-kal, } Having a tendency to drive away poison or fever. *Alexeterics*, are medicines which tend to resist the effects of poison, or the bite of venomous animals.

**ALEXIPYRETIC**, a-lek-se-pi-ret'ik, *s.* (*alezo*, *I* repel, *pyr*, a fever, Gr.) A fever medicine;—*a* operating as a remedy against fever.

**ALEYRODES**, a-la-ro-des, *s.* (*aleuron*, flour, Gr.) A genus of Hemipterous insects: Family, Aphidæ.

**ALFET**, al-fet', *s.* The Saxon name for a cauldron full of boiling water, wherein an accused person plunged his arm up to the elbow, by way of trial or purgation. This custom was a species of ordeal to show his guilt or innocence.—*Ducange*.

**ALGA**, al'ga, *s.* (Latin.) A sea-weed.

Oceanus was garlanded with sea *alga* or sea grass, and in his hand a trident.—*Ben Jonson*.

With *alga* who the sacred altar strews.—*Dryden*.

**ALGÆ**, al'je, *s.* (*alga*, a sea-weed, from *algor*, cold, or more probably from *alligo*, *I* bind, Lat.) An order of plants belonging to the second class Aphylem, of the second grand division of the vegetable kingdom, the Cellulææ. The plants are wholly composed of cellular tissue, ascending from the simplest form known in vegetation to a very compound state. The lowest are filiform and leafless, with their fructification immersed; the highest are leafy, with a fructification included in an indehiscent, wart-like pericarpium. Some copulate like animals; others have a spontaneous emotion, like worms. Their colour is lively; in the lowest grades, green; in the highest, red or purple. They grow at the bottom of the sea, or in fresh water; some are articulated, and others are fibrous. In the arrangement of Lindley, in his *Vegetable Kingdom*, the Algæ are thus classed by their orders:—1. Diatomaceæ, which are crystalline fragmentary bodies, brittle, and multiplied by spontaneous separation. 2. Confervaceæ, filamentary, or membranous bodies, multiplied by zoopores, generated in the interior at the expense of their green matter. 3. Fucaceæ, cellular or tubular unsymmetrical plants, multiplied by simple spores formed externally. 4. Ceraminæ, cellular or tubular unsymmetrical plants, multiplied by tetraspores. 5. Characeæ, symmetrically branched plants, multiplied by spiral nucleoli filled with starch.

## AMMONIA—AMMONITES.

ple of Ammon. Ammonia consists of 3 atoms of hydrogen, and 1 atom of nitrogen; or hydrogen, 17.64; nitrogen, 82.36. The following are some of its compounds:—

AMMONIA, *Acetate of*:—1 atom of acetic acid = 51; 1 atom of ammonia = 17; 7 atoms of water = 63; atomic weight, 131.

AMMONIA, *Bicarbonate of*:—2 atoms of carbonic acid = 54; 1 atom of ammonia = 17; 2 atoms of water = 18; atomic weight, 89.

AMMONIA, *Carbonate of*:—1 atom of carbonic acid = 22; 1 atom of ammonia = 17; atomic weight, 39.

AMMONIA, *Muriate of*:—1 atom of muriatic acid = 37; 1 atom of ammonia = 17; atomic weight, 54.

AMMONIA, *Nitrate of*:—1 atom of nitric acid = 54; 1 atom of ammonia = 17; 1 atom of water = 9; atomic weight, 80.

AMMONIA, *Oxalic of*:—1 atom of oxalic acid = 36; 1 atom of ammonia = 17; 2 atoms of water = 18; atomic weight, 71.

AMMONIA, *Sesquicarbonate of*:—3 atoms of carbonic acid = 66; 2 atoms of ammonia = 34; 2 atoms of water = 18; atomic weight, 118.

AMMONIA, *Sulphate of*:—1 atom of sulphuric acid = 40; 1 atom of ammonia = 17; 2 atoms of water = 18; atomic weight, 75.

The salts of ammonia are generally soluble in water. They are decomposed by the fixed alkalies and alkaline earths, with the evolution of ammonia. When a salt of magnesia, and a soluble phosphate, are added to them, precipitation takes place, and crystals are the result, which are compounds of the phosphate of ammonia and the phosphate of magnesia.

AMMONIACUM, am-mo-ni'a-kum, *s.* A gum resin obtained as a natural exudation from the oospak plant (*Dorema ammoniacum*). It has externally a yellow colour, and is obtained in drops and cakes from the East Indies and Africa; as a medicine, it is used as an expectorant, and sometimes is applied as a plaster. Its varieties are *gutta ammoniaci*, in tears, and *lapis ammoniaci*, in lumps.

AMMONITA, am-mo-ni'ta, or cornu ammonis, *s.* The *pes hyppocampi* of the brain.

AMMONITE, am-mo-nite, *s.* (so named on account of their resemblance to the ram's horn on the head of the Libyan deity Ammon, hence likewise called cornu ammonis.) A genus of extinct cephalopods, the float-shells of which occur in great variety and abundance in secondary strata. The shells are chambered and discoidal; the chambers divided by thin septa, perforated by a syphonule or pipe, forming a hydraulic instrument, by which the animal could rise or sink at pleasure, as is effected by the similar apparatus of the shell of the existing nautilus and spirula ammonites. Ammonites have latterly been divided into many genera, according to the form of the shell, the situation of the syphon, and undulations of the septa, viz., *arietes*, *falciferi*, *amalthæi*, *capricorni*, *planulati*, *dorsati*, *coronarii*, *macrocephali*, *armati*, *ornati*, *dentati*, *flexuosi*.—Which see.

AMMONITES, am'mo-nites, *s.* (*ben yammon*, the son of my kindred, Heb.) In Biblical History, the name of a nation, descended from the incestuous connection of Lot with his youngest daughter. The Ammonites or Ammonitæ inhabited the country situated between the rivers Arnon and Jabbok, N.E. of the Moabites.

## AMMONIUM—AMORITES.

AMMONIUM, am-mo'ne-um, *s.* A name proposed by Sir H. Davy, for a supposed metal which amalgamates with mercury when electrified in contact with ammonia.

AMMOPHTILA, am-mop'til-a, *s.* (*ammós*, sand, and *ptilon*, a wing, Gr.) A genus of birds belonging to the plover family, Charadriadæ.

AMMUNITION, am-mu-nish'un, *s.* (*munition*, fortification, Lat.) Powder and shot; military stores in general.

AMMUNITION-BREAD, am-mu-nish'un-bred, *s.* Bread provided for and distributed to soldiers.

AMNESTIA, am-nes'te-a, *s.* (*a*, priv. and *mnēsis*, the memory, Gr.) Forgetfulness; loss of memory.

AMNESTY, am-nes'te, *s.* (*amnesia*, oblivion, Gr.) An act of oblivion; an act by which crimes against the government, to a certain time, are so obliterated, that they cannot be brought into a charge against those who had offended by their treasons or other misdemeanours.

AMNICOLIST, am-nik'o-list, *s.* (*amnicolo*, from *amnis*, a river, and *colo*, I inhabit, Lat.) One who lives on the banks of a river.—Not used.

AMNIGENOUS, am-nij'e-nus, *a.* (*amnigenus*, from *amnis*, a river, Lat. and *gennao*, I generate, Gr.) Born of a river.—Not used.

AMNION, am'ne-on, *s.* (*amnion*, from *amnos*, a lamb, Gr.) In Anatomy, the internal membrane which envelopes the fœtus in the womb. In Botany, the thin semitransparent membrane in which the embryo of a plant is enveloped in the first stage of germination. *Amni liquor*, the fluid contained in the amnion; *amniotic acid*, an acid obtained from the liquor amnii of the cow.—See ALLANTOIC ACID.

AMOEBAE, a-me'be-a, *s.* (*amoebos*, changing, Gr.) A name given by Ehrenberg to a tribe of the polygastric infusoria.

AMOMUM, a-mo'mum, *s.* (*a*, priv. and *momos*, impurity, Gr. from its being a counter-poison.) An aromatic herb, formerly used in the preservation of dead bodies. A genus of plants, several of the species of which produce cardamoms or grains of paradise, and *A. zinziber*, the melleagetta pepper of commerce: Order, Scitamineæ.

AMONG, AMONGST, a-mung', a-nungst', *prep.* (*among*, Sax.) Mingled with; placed with persons or things on every side; conjoined with others so as to make part of the number.

AMOREANS, am-o're-ans, *s.* The name of an order of Jewish doctors, who were preceded by the Mishnic doctors, and succeeded by the Seburians.

AMOREST, am'o-ris't, *s.* An innamorata; a gallant; a man professing love.

The pen of some vulgar amoret.—Milton.

AMORET, am-o-ret, *s.* (*amoretta*, Ital.) A lover; a person enamoured.

AMORETTE, } am-o-ret', *s.* (*amourette*, Fr.) An AMOURETTE, } amorous woman; love-knots; petty amours; love-tricks; dalliances. Chaucer uses the second sense in these lines:—

For not iclad in silk was he,  
But all in flourish and flourettes,  
I painted all with amorettes.

AMORITES, am'o-rites, *s.* An ancient and powerful tribe of the Canaanitish nation, descended from Seth, the son of Ham. The name is supposed to be derived from a Hebrew word, signifying mountaineer; by others, from *amir*, and signifying the Emir, chieftain, or head, of a tribe.

# AMPLEXUS—AMULA.

**AMPLEXUS**, am-plek's-us, *s.* (Latin, embracing.) A genus of the madrepophyllia; corals of a cylindrical shape, and divided into chambers by numerous transverse septa, which embrace each other with reflected margins.

**AMPLIATE**, am'ple-ate, *v. a.* (*amplio*, Lat.) To enlarge; to make greater; to extend.

**AMPLIATION**, am-ple-a'shun, *s.* Enlargement; exaggeration; extension; diffuseness.

**AMPLIFICATE**, am-plif'e-kate, *v. a.* (*amplifico*, Lat.) To enlarge; to spread out.

**AMPLIFICATION**, am-ple-fe-ka'shun, *s.* Enlargement; extension; exaggerated description, or diffused narrative; an image heightened beyond reality; a narrative enlarged with many circumstances.

**AMPLIFIER**, am'ple-fi-ur, *s.* One that enlarges, exaggerates, or represents anything with a large display of the best circumstances; an enlarger in point of magnitude or grandeur.

**AMPLIFY**, am'ple-fi, *v. a.* (*amplifier*, Fr.) To enlarge; to increase any material substance or object of sense; to enlarge or extend anything incorporeal; to exaggerate anything, or enlarge it by manner of representation; to improve by new additions;—*v. n.* to speak largely in many words; to lay one's self out in diffusion; to form large and pompous representations.

**AMPLITUDE**, am'ple-tude, *s.* (*amplitudo*, Lat.) Extent; largeness; greatness; capacity; extent of intellectual faculties; splendour; grandeur; dignity; copiousness; abundance. In Astronomy, the angular distance of a star, or other celestial body, at the time it rises or sets, from the east or west points of the horizon. *Amplitude of the range of a projectile*, is the horizontal line subtending the path in which it moved; it is usually termed the *range of the gun*. *Magnetical amplitude*, is an arch of the horizon, contained between the sun at his rising, and the east or west point of the compass; or it is the difference of the rising or setting of the sun from the east or west points of the compass.

**AMPLEY**, am'ple, *ad.* (*ample*, Lat.) Largely; liberally; at large without reserve; copiously; with a diffusive detail.

**AMPULLA**, am-pul'la, *s.* (Latin.) A globular-shaped bottle with a narrow neck, used by the Romans at baths, sacrifices, &c. for carrying wine, perfumes, or vinegar: ampullas were used as ornaments of buffets and tables.

**AMPULLARIA**, am-pul-la're-a, *s.* (*ampulla*, Lat.) A genus of fresh-water spiral univalve molluscs, which inhabit the rivers and ponds of India, Africa, and South America; the shell globose, turbinate; spire very short; aperture oblong; lip complete all round, and often slightly thickened or reflected.

**AMPUTATE**, am'pu-tate, *v. a.* (*amputo*, Fr. *amputo*, Lat.) To cut off a limb or other part of the body.

**AMPUTATION**, am-pu-ta'shun, *s.* (*amputatio*, Lat.) The operation of cutting off a limb or other part of the body.

**AMULA**, am'u-la, *s.* (Latin.) In ancient architectural decoration, a vase of common occurrence in the sculptures on altars and temples, made of bronze or marble; the former were round or ornamented with laurel leaves, the latter were frequently channelled.

# AMULET—AMYGDALOIDAL.

**AMULET**, am'u-let, *s.* (*amulette*, Fr. *amuletum*, Lat.) An appended imaginary remedy or preservative of disease, hung round the neck, or attached to any other part of the body. The form of amulets were used in the decoration of Egyptian, Greek, and Roman buildings.

**AMULETIC**, am-u-let'ik, *a.* Of the nature of an amulet; pertaining to an amulet.

**AMURCOSTY**, am-ur-kos'e-te, *s.* (*amurca*, lees, Lat.) The nature or quality of lees or scum.

**AMURCOUS**, am-ur'kus, *a.* Full of dregs.

**AMUSE**, a'muze, *v. a.* (*amuser*, Fr.) To entertain with tranquillity; to fill with thoughts that engage the mind without distracting it. To *divert*, implies something more lively, and to *please*, something more important. To draw on from time to time; to keep in expectation, as 'he amused his followers with idle promises';—*v. n.* to muse: to meditate.—Obsolete in this sense.

Or in some pathless wilderness amusing,  
Plucking the mossy bark off some old tree.—  
*Lord Janus Brutus.*

**AMUSIVE**, a-mu'ziv, *a.* That which has the power of amusing.

**AMUSIVELY**, a-mu'ziv-le, *ad.* In an amusing manner.

**AMYGDALA AMARA**, a-mig'da-la a-ma'ra, *s.* Bitter almonds. The kernels of a variety of amygdalus communis, used in inflammatory complaints, in pulmonic and dyspeptic affections, hooping-cough, asthma, &c.; vehicle for more energetic medicines.

**AMYGDALA DULCIS**, a-mig'da-la dul'sis, *s.* Sweet almonds; kernels of a variety of the amygdalus communis, composed of fixed oil, 54; mucus, 3; saccharine matter, 6; albumen, 24.

**AMYGDALÆ OLEUM**, a-mig'da-le o'le-um, *s.* Almond oil; the oil extracted from the kernels of both varieties of almonds; used in catarrh, united with water, by means of sugar and mucilage, or a few drops of liquor potasse or ammoniac.

**AMYGDALATE**, a-mig'da-late, *a.* Made of almonds.

**AMYGDALÆE**, a-mig'da-le-e, *s.* A natural order of polypetalous exogens, distinguished by its producing the kind of fruit called a drupe, as in the peach, nectarine, plum, cherry, almond, apricot, prune, damson, all of which belong to this order. Another of its characteristics is, that the leaves of the species yield prussic acid, the stamens are numerous, and rise from the orifice of a tubular calyx.

**AMYGDALINE**, a-mig'da-line, *a.* Relating to almonds; resembling almonds.

**AMYGDALOID**, a-mig'da-loyd, *s.* (*amygdala*, an almond, and *eidos*, like, Gr.) A variety of trap rock, generally vesicular, with embedded, round, or almond-shaped minerals, such as agate, calcareous spar, calcined, jasper or zeolites, resembling almonds in a cake—hence the name.

**AMYGDALOIDAL**, a-mig'da-loy-dal, *a.* Containing rounded or kernel-shaped cavities, filled with mineral matter of a different kind from the substance generally.

# AMYGDALUS—ANABAS.

AMYGDALUS, a-mig'da-lus, *s.* A genus of plants, type of the natural order or tribe Amygdaleæ.

AMYGDALITE, a-mig'da-lite, *s.* Almond-stone.

AMYLACEOUS, a-me-la'shus, *a.* Partaking of the nature of starch.

AMYLUM, a-mi'lum, *s.* (Latin.) Starch: starch is obtained by diffusing flour through a large quantity of water, by which the saccharine and mucilaginous matters are dissolved—the fibrous parts floating on the surface, while the fecula is allowed to subside. It consists of oxygen, 49.68; hydrogen, 6.77; carbon, 43.55.—*Compend. Pharm.*

AMYRIDEÆ, am-e-rid'e-e, *s.* (*amyrus*, one of the genera.) A natural order or tribe of polypetalous exogens, consisting chiefly of tropical trees, the leaves, bark, and fruit of which, abound in odoriferous resins, among which are gum elemi, bdellium, and the resin of Coumia: stamens hypogynous, and twice as numerous as the petals; ovary inserted in a large disk; fruit fleshy, one-seeded, and covered with resinous glands.

AMYRIS, a-mi'ris, *s.* (*a.* and *myrrha*, myrrh, Lat.) A genus of plants, type of the natural order Amyrideæ.

AN, an, (*an*, Goth. *ane*, Sax.) The form of the indefinite article when used before a word commencing with a vowel or *h* mute. It signifies *one*, but with less emphasis, as any or some—as 'there stands an ass'; 'an elephant might swim in this water.' In old authors, it is sometimes used for *if*, as, 'an thou wert my father.' Sometimes it is redundant, as—

He will, *an* if he live to be a man.—*Shaks.*

Sometimes as a contraction of *as if*, as—

I will roar you *an* 't were any nightingale.—*Shaks.*

ANA, an'a, *ad.* (Greek.) A word used in the prescriptions of physicians, importing the like quantity, as wine and honey, *ā* or *āna*, § ii; that is, wine and honey, each two ounces. *Ana* is occasionally used as a termination, to denote collections either of remarks made by celebrated individuals, of extracts made from their notebooks, letters, or from newly-published works.

ANABAPTISE, an-a-bap'tize, *v. a.* To rebaptise.

ANABAPTISM, an-a-bap'tizm, *s.* (*ana*, again, and *baptizo*, I dip or baptise, Gr.) The word is applied to a person who has been rebaptised; but such name is rejected by Antipædo-baptists, or as they are more generally called, Baptists, who hold that none should be baptised till they are capable of understanding and professing the Christian faith, and that the ceremony should be performed by immersion or dipping of the whole body in water.

ANABAPTIST, an-a-bap'tist, *s.* One who holds the doctrine of Anabaptism; the term is more particularly applied to a sect of German fanatics, who committed great excesses in the year 1525, and for ten years afterwards. In addition to their notions of the unlawfulness of infant baptism, they are said to have held the unlawfulness of all civil authority, and maintained that, among the saints, all things should be held in common.

ANABAPTISTIC, an-a-bap-tis'tik, } *a.* Relating  
ANABAPTISTICAL an-a-bap-tis'te-kal, } to the notions of Anabaptists.

ANABAPTISTRY, an-a-bap'tis-tre, *s.* The sect or doctrine held by Anabaptists.

ANABAS, an'a-bas, *s.* (*anabaino*, I ascend, Gr.) A genus of acanthopterygious fishes, belonging to the perch family; remarkable for the power they

# ANABASIS—ANACHORITE.

possess of quitting the water for some time, and making their way on land—a power arising from the complicated laminae of their gills retaining the water after they have got on land. The snout of this species is short and obtuse, and both jaws provided with rasp-like teeth, but which are strong and acute on the pharynx.

ANABASIS, an-a-ba'sis, *s.* (*anabasis*, an equisetum, Gr.) A genus of small evergreen exotic shrubs; Order, Chenopodeæ.

ANABENÆ, an-a-be'ue, *s.* (*anabaino*, I ascend, Gr.) A name given by J. A. Ritgen to a family of Saurians, which, like the chameleon, are in the habit of ascending trees. To the same family, the same author applies the terms *anabenoctacties* and *anabenosaurians*.

ANABOTHERA, an-a-both'e-ra, *s.* (*anabothron*, a ladder, Gr.) The name given by Witham to a fossil plant from Allanbank, Berwickshire.

ANABLEPS, an'a-bleps, *s.* (*anablepto*, I look up, Gr.) A genus of fishes belonging to the tribe Cyprinidæ, remarkable for a curious structure of the eye, which protrudes, and has the iris divided into two portions by a transverse band; the snout is truncated; body of a cylindrical shape, and covered with strong scales. Inhabits the rivers of Guiana.

ANABROSIS, an-a-bro'sis, *s.* (Greek.) An erosion or corroding; a consuming or wasting away of any part of the body.

ANACA, a-na'ka, *s.* A small kind of paroquet.

ANACAMPSEROUS, an-a-kamp'se-rus, *s.* (*anakampto*, and *eros*, love, Gr.) A genus of plants, supposed by the ancients to have the power of restoring the passion of love: Order, Partulaceæ.

ANACAMPTIC, an-a-kamp'tik, *a.* (*anakampto*, I reflect or bend back, Gr.) Reflecting or reflected; *an anacamptic sound*, an echo; *an anacamptic hill*, a hill that produces an echo.

ANACAMPTICS, an-a-kamp'tiks, *s.* Cateptics, the doctrine of reflected light.

ANACAMPTIS, an-a-kamp'tis, *s.* (*anakampto*, Gr.) The orchis pyramidalis of Linnaeus: Order, Orchideæ.

ANACANTHUS, an-a-kan'thus, *s.* (*ana*, and *kanthos*, a spine, Gr.) A genus of skate fishes which have neither spine nor fin upon the tail.

ANACARDIACEÆ, an-a-kâr-de-n'se-a, *s.* (*ana*, and *kardia*, the heart, Gr.) A natural order of polypetalous exogens, consisting of woody plants abounding in an acrid resin; flowers with perigynous stamens; fruit, superior, simple, one-seeded; leaves alternate, without stipule. It contains among its genera the sumach, the pistacias, the mango, and the cashew, the nuts of the latter are well known as yielding a black caustic oil, and a wholesome kernel, used in making puddings, or eaten raw, in the West Indies.

ANACARTHETICS, an-a-kâr-thet'iks, *s.* (*ana*, and *katharos*, pure, Gr.) A name given by the Greeks to cough, attended with expectoration; any medicine that operates upwards.—*Quincy.*

ANACEPHALOSIS, an-a-sef'a-le-o'sis, *s.* (*anakephalaosis*, Gr.) Recapitulation or summary of the principal heads.

ANACEPHALIZE, an-a-sef'a-lize, *v. a.* (*ana*, again, and *kephale*, a head, Gr.) To recapitulate; to go over the heads of a discourse again.

ANACHORET, an-ak'o-ret, } *s.* A hermit; a monk  
ANACHORITE, an-ak'o-rite, } who leaves the convent to lead a more secluded life.

## ANACHORETICAL—ANAGOGICAL.

**ANACHORETICAL**, an-a-ko-ret'e-kal, *a.* Relating to a hermit or anachoret.

**ANACHRONISM**, an-ak'kro-nizm, *s.* (*ana* and *chronos*, time, Gr.) An error in computing time, by which events are misplaced in regard to each other. It seems properly to signify an error by which an event is placed too early; but is generally used for any error in chronology.

**ANACHRONISTIC**, an-a-kro-nis'tik, *a.* Containing an anachronism.

**ANACLASTICS**, an-a-klas'tiks, *s.* (*ana* and *klao*, I break, Gr.) Dioptrics, or that branch of optics which treats of the refraction of light.

**ANACROINOSIS**, an-ak-o-e-no'sis, *s.* (*anakroinos*, Gr.) A figure in Rhetoric, by which the speaker applies to his hearers or opponents for their opinion upon the points in dispute.

**ANACONDA**, an-a-kon'da, *s.* The great serpent of the island of Ceylon, a species of boa.

**ANACREONTIC**, an-ak-re-on'tik, *s.* A little poem written in the style of Anacreon, devoted to love and wine;—*a.* relating to, or in the manner of Anacreon.

**ANACTYLUS**, an-a-si'klus, *s.* (abridged from *anactylus*, a word composed of *a*, without, *anthos*, a flower, and *kyklos*, a circle, Gr.) The Ring-flower, a genus of composite plants, which have rows of ovaries, without flowers, placed in a circle round the disk.

**ANADEMUS**, an-a-de'mus, *s.* A name given by Swinson to a genus of birds belonging to the *Leptostominae* or long-billed cuckoos—India.

**ANADEME**, an'a-deme, *s.* (*anadema*, Gr. *anademe*, Fr.) A garland of flowers worn round the head.

In *anademes* for whom the curious dispose  
The red, the dainty white, the goodly damask rose.

Ben Jonson.

**ANADENTIA**, an-a-de'ne-a, *s.* (*a*, without, and *aden*, a gland, Gr.) A genus of Australian plants: Order, *Proteaceae*.

**ANADIPLOSIS**, an-a-de-plo'sis, *s.* (Greek.) Reduplication; a figure in rhetoric, in which the last word of the foregoing member of a period becomes the first of the following, as—'he retained his virtue amidst all his misfortunes, misfortunes which only his virtue brought upon him.'

**ANÆSTHESIA**, a-nēs-the'a, *s.* (*a*, without, and *æsthesia*, feeling, Gr.) Deprivation of the sense of touch.

**ANAGALLIS**, an-a-gal'lis, *s.* (Greek name.) Pimpernel, or the poor man's weather-glass, a genus of plants with wheel-shaped corollas and a capsule opening into two halves, the upper of which fits into the other. The pimpernel opens in the morning and closes in the afternoon; its petals remain shut in wet weather.

**ANAGLYPH**, an'a-glif, *s.* (*anaglyphe*, Fr. from *ana* and *glypho*, I engrave, Gr.) An ornamental engraving on plate; anything in relief in sculpture.

**ANAGLYPTIC**, an-a-glip'tik, *a.* Pertaining to the art of engraving, chasing, or embossing on plate.

**ANAGOGICAL**, an-a-goj'e-kal, *a.* (*anagogique*, Fr.) Mysterious; elevated; religiously exalted.

## ANAGOGICALLY—ANALEPSIS.

**ANAGOGICALLY**, an-a-goj'e-kal-le, *ad.* Mysteriously; with religious elevation.

**ANAGOGICS**, an-a-goj'iks, *s.* 'Mysterious considerations.'

**ANAGOGY**, an-a-go-je, *s.* A mystical meaning applied to the language of Scripture.

**ANAGRAM**, an'a-gram, *s.* (*ana*, back, and *gramma*, a letter, Gr.) A transposition of letters so as to form other words.

Live, vile, and evil, have the self-same letters.  
He lives but vile whom evil holds in fetters.

**ANAGRAMMATICAL**, an-a-gram-mat'e-kal, *a.* Forming an anagram.

**ANAGRAMMATICALLY**, an-a-gram-mat'e-kal-le, *ad.* In the manner of an anagram.

**ANAGRAMMATISM**, an-a-gram-mat-izm, *s.* The art or practice of making anagrams.

**ANAGRAMMATIST**, an-a-gram'ma-tist, *s.* A maker of anagrams.

**ANAGRAMMATIZE**, an-a-gram'ma-tize, *v. n.* To make anagrams.

**ANAL**, an'al, *a.* Pertaining to the anus; placed below the tail. *Anal-angle*, in Entomology, the internal angle at the base of an insect's wing; *anal-area*, that part of the wing of a dipterous insect which is situated within the middle nervure, or in orthopterous insects, that part which is situated between the anal and the posterior margin; *anal-nervure*, the principal nerve in the wing of an insect adjoining the internal or posterior margin; *anal-segment*, the hinder segment of an annelide; *anal-glands*, glands situated near the anus of certain animals by which secretions are formed, sometimes attractive, but usually repulsive in their properties; *anal-valves*, certain valves situated at the terminal orifice of the intestines of some of the cephalopods, for the purpose of preserving it from the entrance of foreign substances.

**ANALCIME**, an-al'sim, *s.* (*analkis*, weak, Gr.) Cubicite, a mineral, a variety of zeolite, occurring usually in trap rocks, in cubic crystals, either perfect or having each of the solid angles replaced by three planes. It also occurs in diverging fibres, forming aggregated crystals; fracture, flat, conchoidal; colour, white, grey, yellowish, reddish, or deep red; scratches glass; translucent or transparent; occasionally opaque; it becomes weakly electric when rubbed—hence the name analcime. Sp. gr. 3, nearly. It consists of silica, 57.07; alumina, 20.22; soda, 14.71; water, 8.28.

**ANALCIPUS**, an-al'se-pus, *s.* (*analkis*, weak, and *pous*, a foot, Gr.) A genus of birds. A. *hirundinaceus*, an Indian species, is about six inches in length, black above, glossed with blueish green, with a band on the rump, and all the under plumage white; feet weak and short—hence the name: Family, *Dicrurinae* or Drongo Shrikes.

**ANALECTA**, an-a-lek'ta, *s.* A collection of extracts from different works; a servant employed in the houses of the wealthy Romans to collect the scraps after meals.

**ANALECTS**, an'a-lekts, *s.* (*analektes*, Fr. from *analego*, I pick up, Gr.) Fragments selected from authors; select pieces; in our old dictionaries, crumbs which fall from the table.

ANNULAR CARTILAGE, *s.* The cricoid cartilage.—See Larynx.

ANNULAR CRYSTAL, an'nu-lar krist'tal, *s.* A hexagonal prism with six, or an octohedral prism with eight marginal faces, disposed in a ring about each base, or, when these prisms are truncated, on their terminal edges.

ANNULAR ECLIPSE, an'nu-lar e-klips', *s.* An eclipse of the sun, during which the moon obscures from the inhabitants of this planet the whole of the sun's surface, except a luminous ring round its border.

ANNULARIA, an-nu-la're-a, *s.* A genus of fossil plants, with leaves arranged in ring-like whorls round the stem.

ANNULAR LIGAMENT, an'nu-lar lig'a-ment, *s.* (*ligamentum ciliare*, Lat.) The circular band that unites the iris and the sclerotic membrane to the choroid coat of the eye; also, a strong ligament encompassing the wrist.

ANNULAR MOULDING, an'nu-lar mole'ding, *s.* A

# ANNULAR PROCESS—ANNUNCIATION.

**annular** having, generally, a circular horizontal section.

**ANNULAR PROCESS.**—See Pons Varioli.

**ANNULAR VAULT,** an'-nu-lar vawlt, *s.* In Architecture, a vault rising from two circular walls; the roof of a circular corridor.

**ANNULATA,** an-nu-la'ta, *s.* Cuvier's first class of his third grand division of the animal kingdom, the Articulata. The Annulata are the only invertebrated animals which have red blood. It circulates in a system of complicated vessels. Their nervous system consists of a double-knotted cord, like that of insects. The body is soft, more or less elongated, and divided into a considerable number of segments, or at least, of transverse folds or plaits. With the exception of the Lumbrici, or earth worms, they are nearly all aquatic. Some construct tubes, with the cone or other matters, into which they burrow, or exude calcareous tubular shells, in which they live.

**ANNULATE,** an-nu-late, *a.* Formed into, or consisting of, rings or annular segments. In Botany, applied to the capsule, stem, or root of a plant, if surrounded with apparent rings.

**ANNULET,** an-nu-let, *s.* (*annulus*, Lat.) In Heraldry, a difference or mark of distinction, which the fifth brother of any family ought to bear in his coat of arms. *Annulets* are also a part of the coat-armour of several families, and were anciently reputed a mark of nobility and jurisprudence. In Architecture, a small square moulding, crowning or accompanying another; applied, also, to the fillet which separates the flutings of a column, termed likewise, a *list*, *listel*, or *listella*.

**ANNULMENT,** an-nul'ment, *s.* (*annullement*, Fr.) The act of annulling.

**ANNULUS,** an-nu-lus, *s.* (*annulus*, a ring, Lat.) In Botany, the membrane which encircles the stem of a fungus. In Anatomy, a ring-like part or opening, as, *annulus osseus*, the temporal bone in the fetus; and *annulus abdominalis*, or the abdominal ring, the opening through which the spermatic cord in man, and the circular ligament of the uterus in woman, passes, formed by the separation of the external oblique muscle of the abdomen. It is through this opening that the intestines protrude in inguinal rupture.

**Annulus**, a ring, has the following combinations in Natural History:—*Annulicaudus*, ring-tailed; *annulicornis*, having ringed-horns or antennae; *annuliferus*, bearing rings; *annulipes*, ring-footed. In Anatomy, *annulus foraminis*, the muscular margin of the foramen ovale, or opening situated in the partition separating the right and left auricles in the fetus. *Annulus ovalis*, the ring that surrounds the *fossa ovalis* or oval depression, presented by the septum of the right auricle.

**ANNUMERATE,** an-nu-me-rate, *v. a.* (*annuero*, Lat.) To add to a former number; to unite to something before-mentioned.

**ANNUMERATION,** an-nu-me-ra'shun, *s.* (*annumeratio*, Lat.) Addition to a former thing.

**ANNUNCIATE,** an-nun'she-ate, *v. a.* (*annuncio*, Lat.) To bring tidings; to relate something that has fallen out; a word not in common use.

Lo, Sampson, which that was *annunciat*  
By the angel, long or his nativitee.—Chaucer.

**ANNUNCIATION,** an-nun'she-a-shun, *s.* (*annonciatio*, Fr.) The name given to the day celebrated by certain Churches, in memory of the angel's visitation of the Virgin Mary—solemnized on the twenty-fifth of March; proclamation; promulgation.

**ANOLIS,** an'o-lis, *s.* The vernacular name in the West Indies of a genus of lizards, belonging to the *Iguana* family, remarkable for having the power of inflating the skin of the throat.

**ANOMALIA,** an-o-ma'le-a, *s.* (Greek.) Irregularity of the pulse.

**ANOMALINA,** a-nom-a-li'na, *s.* (*anomolos*, irregular, Gr.) A genus of foraminiferous shells, found in the fossil state in tertiary strata.

**ANOMALIPED,** a-no-ma'le-ped, *s.* (*anomalia*, anomaly, and *pous*, a foot, Gr.) A term applied to a bird, the middle toe of which is united to the exterior by three phalanges, and, to the interior, by one only;—*a.* anomalously footed.

**ANOMALISM,** a-nom'a-lizm, *s.* Anomaly; irregularity; deviation from the common rule.

**ANOMALISTIC,** a-nom'a-lis-tik, } *a.* Irregular.  
**ANOMALISTICAL,** a-nom-a-lis'te-kal, } lar; an anomalous year, in Astronomy, is the interval in time in which the earth completes a revolution in its orbit. The length of the tropical year is 365 days, 5 hours, 48 minutes, 45 seconds; that of the anomalous year, 365 days, 6 hours, 13 minutes, 45 seconds.

**ANOMALOUS,** a-nom'a-lus, *a.* (*anomolos*, irregular, Gr.) Irregular; out of the common rule; deviating from the ordinary method or analogy of things.

**ANOMALOUSLY,** a-nom'a-lus-le, *ad.* Irregularly.

**ANOMALOUSNESS,** a-nom'a-lus-nes, *s.* Irregularity.

**ANOMALY,** a-nom'a-le, *s.* (*anomalia*, Gr.) Irregularity; contrary to common rule; used, in Astronomy, to denote the angular distance of a planet from its perihelion, as seen from the sun. In Grammar, denotes an irregularity in the accents of a word, in which it deviates from the common rules, whereby words of a like kind are governed.

**ANOMIA,** a-no'me-a, *s.* (*a*, without, and *nomos*, a law, Gr.) A genus of acéphalous testacea, belonging to the *Ostracea* or oyster family. The shell consists of two thin valves, the under one of which is flattened, and has a deep marginal notch or hole near the umbo; the greater portion of the central muscle passes through this opening, and is inserted into a third piece, of a horny or calcareous nature, by which the shell adheres to extraneous bodies; the upper valve is long, concave, and entire—found in every sea.

**ANOMITE,** an'o-mite, *s.* A fossil species of *anomia*.

**ANOMOPTERIS,** a-no-mop'ter-is, *s.* (*anomos*, irregu-

lar, and *pterys*, a fern, Gr.) A genus of fossil ferns, found in the new red sandstone formation.

**ANOMORHOMBOID**, a-nom-o-rom'boyd, *s.* (*anomoios*, irregular, and *rombooides*, of a rhomboidal figure, Gr.) A name given to certain varieties of crystalline spars, of no determinate regular external form, but always fracturing into irregular rhomboids.

**ANOMORHOMBOIDAL**, a-nom-o-rom'boyd-al, *a.* Consisting of irregularly formed rhomboids.

**ANOMY**, an'o-me, *s.* (*a*, without, and *nomos*, law, Gr.) Breach of law.

**ANON**, a-non', *ad.* (derivation uncertain, supposed to be from, *at one*.) Quickly, soon; in a short time; a contraction for anonymous.

**ANONA**, a-no'na, *s.* (*menona*, the Malayan name of the Custard apple.) A genus of trees with large roundish pulpy fruit, one species of which, *A. squamosa*, yields the Custard apple.

**ANONACEÆ**, a-non-a'se-e, *s.* (*anona*, one of the genera.) A natural order of exogenous plants, belonging to the sub-class, Thalamifloræ: sub-division, Dichlamydeæ. The plants of this order consist chiefly of evergreen tropical trees or shrubs, allied to the Magnolias, from which they are principally distinguished by the absence of stipule, and by the structure of the anthers and seeds: the flowers are ternary, with a ruminated albumen.

**ANONYMOUS**, a-non'e-mus, *a.* (*a*, without, and *onoma*, a name, Gr.) Wanting a name.

**ANONYMOUSLY**, a-non'e-mus-le, *ad.* Without a name.

**ANOPLOTHERIUM**, an-o-plo-the're-um, *s.* (*anoplos*, unarmed, and *therion*, a wild beast, Gr.) A genus of pachydermatous, or thick-skinned, animals, the remains of which, found in tertiary strata near Paris, indicate several extinct species of animals intermediate in structure between the rhinoceros and the horse, in one respect, and the hippopotamus, the hog, and camel, in another.

**ANOREXY**, an'no-reks-e, *s.* (*a*, without, and *orexis*, longing, appetite, Gr.) Want of appetite.

**ANORMAL**, a-naw'r-mal, *a.* (*anormis*, Lat.) Irregular; deformed.

**ANORTHRITE**, a-naw'rth'rite, *s.* (*a*, without, and *orthos*, right, Gr.) A variety of felspar, distinguished by the absence of right angles in its crystals. It is composed of silica, 44.49; alumina, 34.40; lime, 15.68; magnesia, 5.30; oxide of iron, 1.

**ANOSMIA**, a-nos'me-a, *s.* (*a*, without, *osme*, smell, Gr.) Want of the sense of smelling.

**ANOSTOMA**, a-nos'to-ma, *s.* (*ano*, upward, and *stoma*, a mouth, Gr.) A genus of univalve terrestrial Testacea, allied to the Helix, or shell-snail; distinguished by the shell having the mouth turned upwards towards the spire.

**ANOTHER**, an-uth'ur, *a.* (*anther*, Goth.) Not the same; any other; any one else; widely different; much altered.

**ANT**, ant, *s.* (*amitt*, Sax. supposed to be contracted to *ant*, and afterward softened into *ant*.—Todd.) The English name of the genus Formica. The ants are small hymenopterous insects, remarkable for their devoted attention to the pupa or chrysalis, which is the third transformation; these, resembling grains of rice, are heaped up in their spacious apartments, and borne out occasionally to enjoy the sun. This circumstance has given rise to the popular, but erroneous notion, that these insects store up grain as a provision for winter. Ants are not granivorous, but carnivorous animals, preying on the soft parts of other insects, especially the viscera, or upon worms, small birds, and other animals.

**ANT-BEAR**, ant'bare, *s.* The common name of

# ANT-CATCHERS.—ANTARCTIC.

*Myiophaga jubato*, a large South American  
of Ant-eater.

**MYIOPHAGERS**, ant'kash-urz, *s.* The *Myiophaga*  
er, a genus of birds, allied to the thrushes,  
live chiefly on ants.

**MYIOPHAGUS**, ant'e-tur, *s.* An animal which lives  
—See *Myrmecophaga*.

**ANT-HILL**, *s.* The small protuberances of  
which ants make their nests.

**MYIOPHAGUS**.—See *Myiophagina*.

**ANT**. A contraction for *and it*, or rather for  
*it*, as, 'an't please you,' that is, 'and if it  
you.'

**ANT**, *s. pl. antæ*. In Architecture, jambs  
or square posts, supporting the lintels,  
or pilasters, attached to a wall, and form-  
ing entrances of edifices in general. The  
called the first row of vines, bordering a  
st, *antæ*, and it is probable the word passed  
is use into architecture.

**ANTACID**, ant'-as-sidz, *s. pl. (anti, against, Gr. anta.)* Carbonic or alkaline substances, used  
teracting acidity of the stomach. The sub-  
usually taken, are carbonate of soda, or  
of magnesium, dissolved in water.

*Gr.)* That which relieves pain; anodyne.

**ANTAGONISM**, ant-a-na-kla'sis, *s. (antagoniasis, Lat.)*  
A figure in Rhetoric, when the same word  
used in a different, if not in a contrary  
ation; as, 'In thy youth, learn some craft,  
thy old age, thou may'st get thy living  
craft.' Craft, in the first, signifying science  
gation—in the second, deceit or subtility.  
*Antagonism*, signifies, also, a returning to the  
at the end of a long parenthesis.

**ANTAGONIST**, an-tan'a-gog, *a. (anti, against, and*  
*os, contumacious, Gr.)* A figure in Rhe-  
when not being able to answer the accusa-  
the adversary, we return the charge, by

## ANTIMONY.

ANTIMONY, an'te-mo-ne, *s.* (The ancient name of this  
metal was stibium, and it is said to have acquired  
its modern appellation from one Basil Valentine,  
a German monk, who, observing that the pigs of  
his convent fattened well after being purged with  
a dose of the metal, deemed that what fattened  
pigs might do for monks; he tried the experiment,  
and they all died—hence the name *antimoine*, *anti-*  
*monk*. Todd treats this story, given by Dr.  
Johnson, as more romantic than true, and refers  
the name to *anti*, and *monos*, one, Gr., in allu-  
sion to its occurring not in one, but in many  
mines. One of the old Dictionaries gives the  
Arabian word *antimad*, as the etymology.) Anti-  
mony is a metal of a silvery white colour, with a  
considerable lustre; finely laminated when pure.  
In the act of slowly cooling, after being fused, it  
crystalizes into an octahedron, or its varieties; sp.  
gr. according to Dr. Thomson, 6.436. When  
heated in the air, it unites with oxygen in different  
proportions. It occurs in the mineral state as a  
sulphuret, associated with quartz, sulphate of  
barytes, carbonate of lime, &c. It is generally  
met with in masses formed of closely aggregated  
acicular crystals, which are extremely brittle, and  
melt when exposed to the flame of a candle, yield-  
ing a sulphureous smell; colour lead-grey, inclin-  
ing to steel-grey. The ore consists, according to  
Dr. Ure, of 72.86 parts of the metal, and 27.14  
of sulphur; specific gravity, 4.13 to 4.6. The  
following are the principal of its chemical com-  
binations:—

ANTIMONY, *Bromide of*:—Consists of bromine, 64.3;  
antimony, 35.7.

ANTIMONY, *Crude, or Sesquisulphuret of*:—2 atoms  
of sulphur = 16; 2 atoms of antimony = 128;  
atomic weight, 64.

ANTIMONY, *Deutoxide of*:—2 atoms of oxygen =  
16; 1 atom of antimony = 64; atomic weight, 80.

ANTIMONY, *Iodide of*:—Consists of iodine, 74.7;  
antimony, 25.3.

ANTIMONY, *Perchloride of*:—5 atoms of chlorine  
= 180; 2 atoms of antimony = 128; atomic  
weight, 308.

ANTIMONY, *Peroxide, or Glass of*:—5 atoms of  
oxygen = 40; 2 atoms of antimony = 64;  
atomic weight, 168.

ANTIMONY, *Sesquichloride, or Butter of*:—3 atoms  
of chlorine = 108; 2 atoms of antimony = 128;  
atomic weight, 236.

ANTIMONY, *Sesquioxide of*:—Consisting of 3 atoms  
of oxygen = 24; 2 atoms of antimony = 128;  
atomic weight, 152.

The only salt of antimony which has been found of  
much importance, is the double tartarate of potash  
and antimony, known generally by the name of  
tartar emetic or tartarized antimony. Antimony  
combines with all metals, even gold, which, when  
combined with it to the extent of only one thou-  
sandth part, is rendered unfit for the purposes to  
which it is usually applied. It is one of the in-  
gredients in type metal, stereotype metal, music  
plates, and Britannia metal. The preparations of  
antimony used in medicine were very numerous.  
Those retained in our Pharmacopœias, are *Sulphur-*  
*etum antimonii*, the sulphuret of antimony. *Sul-*  
*phuretum antimonii præcipitatum*, the precipitate  
of antimony. *Antimonium tartarizatum*, tartar-  
ized antimony. *Antimonii tartarizatum vinum*,  
wine of tartarized antimony. *Pulvis antimonialis*,

The following are those which have been chiefly employed:—*Aqua aëris fixi*, water impregnated with fixed air—carbonic acid. *Aqua alkalina muriatica*, a bleaching liquid, prepared thus—muriate of soda, dried, lbij; powdered manganese, lbj; mix these together, put them into a matrass, and add water and sulphuric acid, gradually, and at intervals; transmit the disengaged gas through a solution, consisting of  $\frac{3}{4}$  of carbonate of kali, and  $\frac{3}{4}$  xx, by measure, of water. Towards the end of the operation, apply a moderate heat to the matrass. *Aqua Benedicti Rolandi*, a solution of crocus of antimony in wine, an active emetic. *Aqua fer-neli*, a mixture of corrosive sublimate and lime-water, with the addition of a little spirit of wine. *Aqua florum aurantium*, or *Aqua naphthæ*, orange-flower water, water distilled from orange-flowers, much esteemed on the Continent as an antispasmodic dose, from  $\frac{3}{4}$  j to  $\frac{3}{4}$  iv, or more. *Aqua fortis*, nitric acid—which see. *Aqua græca*, a weak solution of the nitrate of silver. *Aqua grysea*, an aqueous solution of nitrate of mercury, mixed with a decoction of various plants. *Aqua regia*, nitro-muriatic acid, so named from its power of dissolving gold; it also dissolves iron,

copper, tin, mercury, regulus of antimony, bismuth, and zinc. *Aqua roseæ*, rose-water. *Aqua sapphirina*, *aqua carula*, or *aqua cupri ammoniaci*, blue-eye-water, made by mixing  $\frac{3}{4}$  j of sal-ammoniac with lbj of lime-water, and putting a piece of clean copper into the mixture, where it should remain till the fluid acquires a fine blue colour. *Aqua vegeto-minerale*, Goulard water, made of vinegar and lead. The NATURAL WATERS are, *aqua fluvialis*, river-water; *aqua fontana*, spring-water; *aqua ex nive*, snow-water; *aqua ex puteo*, well-water; *aqua pluvialis*, rain-water; *aqua ex lacu*, lake-water; *aqua palude*, marsh-water; *aqua marina*, sea-water. The ARTIFICIAL WATERS are, *aqua distillata*, distilled-water; *aqua tostipanis*, toast-water; *aqua calcis*, lime-water; *aqua picis*, or *picis liquida*, tar-water; *aqua mentha piperita*, peppermint-water; *aqua mentha viridis*, spearmint-water; *aqua pimentæ*, allspice-water; *aqua pulegiæ*, pennyroyal-water.

**AQUÆDUCTUS**, ak-kway-duk'tus, *s.* (Latin.) An aqueduct, a name applied by anatomists to certain canals in the human body, viz.:—*Aquæductus cochleæ*, the aqueduct of the cochlea; a foramen of the temporal bone, for the entrance and exit of the blood-vessels connected with the ear. *Aquæductus Fallopii*, the aqueduct of Fallopius; the canal by which the portio dura windsthrrough the petrous part of the temporal bone. *Aquæductus Sylvii*, the aqueduct of Sylvius; the passage or canal which extends from the under and back parts of the brain, called the tubercula quadragemina into the fourth ventricle. *Aquæductus vestibuli*, aqueduct of the vestibulum; a canal which commences in the vestibule of the internal ear, near the opening of the semicircular canals, and terminates between the layers of the dura mater, on the posterior surface of the temporal bone.

**AQUA-MARINA**, ak-kwa-ma-ri'na, *s.* (*aqua*, and *marinus*, marine, Lat.) A name sometimes given to the beryl, from its being of a sea-green colour.

**AQUARIANS**, a-kwa're-ans, *s.* A sect of Christians which, in the third century, used water instead of wine, in their celebration of the Eucharist.

**AQUARIUS**, ak-kwa're-us, *s.* (Latin.) The Water-bearer. A constellation forming the eleventh sign of the Zodiac. It is supposed to have received its name from the circumstance of its bringing with it an abundance of rain. It rises in January, and sets in February. According to Flamstead, it contains one hundred and eight stars. Its sign is ♒.

**AQUATIC**, a-kwat'ik, } *a.* Inhabiting, or growing in the water.

**AQUATICAL**, a-kwat'e-kal, } *s.* An ancient sect, which maintained that water was eternal and uncreated; probably adopting the philosophical notion of Thales, that water was the first principle of all things.

**AQUATICS**, a-kwat'iks, } *s.* An ancient sect, which maintained that water was eternal and uncreated; probably adopting the philosophical notion of Thales, that water was the first principle of all things.

**AQUATILE**, ak'kwa-tile, *s.* Relating to, or inhabiting the water. In Natural History, applied to distinguish things which inhabit the waters, as, aquatic birds, reptiles, insects, plants, &c. The term aquatic is applied in Botany to such plants as grow at the bottom of lakes, seas, or rivers, and are entirely submerged like the Conferva, or which float on the surface like Lemna; or which have their roots fixed in the soil, while their leaves and stems float on the surface, as Nymphaea, Trapa; or which rise above it, as Alisma plantago;

to those which grow on the borders of lakes, or stagnant pools, as *Bignonia Nibora aquatica*, *Cerastium aquaticum*, ak-kwa-till'e-a, *s.* A name given by and others to a section of birds; by a family of Mollusca; by Latreille, to of Crustacea, and by Lamarek, to a semipterous insects, all of which live in, on its surface, or on its brink.

A, ak-kwa-tin'ta, *s.* (*aqua*, Lat. and *tinta*, ) A mode of etching in imitation of in Indian ink.

ANIA, ak-kwa tof-fa'ne-a, *s.* Termed ita, *Aqua della Toffana*, *Aquetta di Napoli*. A poison prepared by a woman of the Tophana, who resided first at Palermo, waris at Naples. She confessed, when rack before her execution, that she had upwards of six hundred persons with it. It chiefly to women who wished to get husbands. It is generally supposed to a preparation of arsenic; from four to proved fatal.

A, ak-kwa-vi'te, *s.* (*aqua*, and *vita*, *viter*, ) A name very absurdly given to brandy alcoholic intoxicating liquors. It lites the water of Life. It should have *aqua mortis*, the water of Death: as to myriads.

ak'kwe-dukt, *s.* (*aqua*, and *duco*, I ) A conductor or conduit of water, restricted in its application to construct the surface of the ground, for carrying a gentle current across valleys and over one place to another.

ak'kwe-us, *a.* (*aqueux*, Fr. from *aqua*, ) Watery.

ESS, ak'kwe-us-nes, *s.* Waterishness.

CEE, ak-kwe-fo-le-a-se-e, *s.* A natural plants, belonging to the polycarpous diplopetalous Exogens. In Lindley's nomenclature, he enumerates nine genera, as to it. Its only European one is the *Ilex* or common holly, which forms the type of the natural order Ilicineæ.

AK, ak-kwe-fo'le-um, *s.* (*acus*, a needle, *us*, a leaf, Lat.) The Latin name of the *Ilex aquifolium*, so called from the nature of its leaves: Order, Ilicineæ.—

-kwil'a, *s.* The Latin name of the constellation immediately above Capricorn: a genus of birds, including quills which have the wings lengthened; quill short, the fourth and fifth, the the head not crested, and the tarsus almost to the toes.

-kwil'e, *s.* In Anatomy, the name given to the sinews which pass through the temples into

A, a-quil-a-re-a, *s.* (*aquila*, an eagle, Lat., of A. Malaccensis, is called *Bois d'Aigle*, wood, in Malacca.) A genus of plants, the order Aquilarineæ; perigone, five-veined, ten-cleft; stamens, ten; anthers, style, none.

CEE, ak-kwe-la-ri-a-se-e, *s.* A natural order of Lindley's incomplete Exogens, consisting of trees, with smooth branches, and a tough

bark; leaves, alternate, entire, seated on short stalks, without sepals, with fine veins running into a marginal one, just within the margin; calyx, turbinate or tubular; limb, five-cleft; stamens, five or ten; the anthers, narrow, oblong, attached by their back, below the middle, two-celled; placenta, spuriously two-celled; ovules, two, one of which tapers downwards; style, absent, or when present, conical; fruit, pear-shaped; radicle, straight and superior; cotyledons, thick, fleshy, and hemispherical. It differs from *Samyda* in the seeds not being fixed to the parietes, and from *Chaillatiaceæ*, in their being erect, not inverted, and from *Thymeleæ*, in the fruit being two-valved, two-celled, and two-seeded.

AQUILEGIO, ak-kwe-le'je-a, *s.* (*aquila*, an eagle, from the inverted spurs of the flowers, resembling the talons of an eagle. Its English name, Columbine, from *Columbus*, a dove, Lat., is from the same cause.) Columbine, a genus of plants, consisting of perennial herbs, with fibrous roots; flowers, white, blue, rose, or purple; calyx, consisting of fine coloured petal-like deciduous sepals; petals, five each, drawn out into a hollow spur.

AQUILINEÆ, ak-kwe-lin'e, *s.* The name given by Swainson to a sub-family of the Falconideæ, including the Eagles, properly so called. It contains the genera *Pandion*, *Aquila*, *Harpyia*, *Gypogeryon*, and *Circetus*, all of which consist of large birds, with the bill rather straight at the base, but curved towards the end—feet strong and muscular, tarsus more or less feathered, and the claws large and much curved.

AQUILINE, ak'kwe-line, *a.* (*aquilinus*, Lat.) Resembling an eagle; when applied to the nose, hooked.

Those ends were answered once, when mortals lived, Of stronger wing, of *aquiline* ascent, In theory sublime.—*Young*.

His nose was *aquiline*, his eyes were blue.—*Dryden*.

AQUILON, ak'kwil-on, *s.* (French, from *aquilo* Lat.) The North wind.

Blow, villain, blow, till thy sphered bias check  
Out-swell the colick of puff'd *aquilon*.—*Shaks*.

AQUIPARIA, ak-kwe-pa're-a, *s.* (*aqua* and *paro*, I engender, Lat.) A name given by Blainville to a division of the *Batrachia*, which deposit their progeny in water.

AQUOSE, a-kwose', *a.* Watery.

AQUOSITY, a-kwo-se'te, *s.* Waterings.

ARA, a'ra, *s.* (Latin.) The Altar, a constellation situated near the Wolf and the Peacock, near the South Pole; also, the *Macrocercus*, a species of Macaw.

ARAB, ar'ab, *s.* A native of Arabia.

ARABESQUE, ar'a-besk, *a.* (French.) Relating to the architecture of the Arabians;—*s.* a building after the manner of the Arabians. The term is more commonly applied to the species of ornament used in adorning the walls, pavements, and roofs of Moorish and Arabian buildings, consisting of intricate and heterogeneous admixtures of fruits, flowers, scrolls, and other objects, to the exclusion of animals, the representation of which is forbidden by the Mahomedan religion. This kind of ornament is now frequently used in the adorning of books, plate, &c. Foliage very similar to that used by the Arabians, intermixed with griffins, &c. were frequently employed on the walls and friezes of temples, and on many of the ancient Greek vases; on the walls of the baths of Titus, at Pom-

peii and many other places; the Arabian language is also sometimes called the *Arabesque*.

**ARABIAN**, a-ra'be-an, *s.* A native of Arabia; relating to Arabia.

**ARABIC**, ar'a-bik, *a.* Arabian;—*s.* the language of Arabia.

**ARABIC or GUM ARABIC**, *s.* A transparent gum obtained from the Egyptian *Acacia*.

**ARABICALLY**, ar-ab'be-kal-le, *ad.* In the Arabic manner, or interpretation.

**ARABICI**, a-rab'e-se, *s.* An Arabian sect which sprung up in the second century. Their chief heresy consisted in maintaining that the soul could not exist without the body, and that, consequently, it died with it, and would rise with it at the resurrection. Origen is said to have convinced them of their error.

**ARABIDEE**, a-ra-bid'e-e, *s.* (*Arabia*, and *idea*, conception of a thing.) Otherwise named *Pleurorhizem*, a tribe of the order *Crucifere*, consisting of many genera, all of which have the silique dehiscent, with a linear dissepiment, which has more or less breadth than the seeds; the seeds are oval, compressed, and usually margined; the cotyledons flat and parallel with the dissepiment: Sub-order, *Pleurorhizem*.

**ARABIS**, a-ra'bis, *s.* (*Arabia*.) The Wall-cress, a genus of plants, without compressed siliques, or flat valves: Order, *Crucifere*.

**ARABISM**, ar'ab-izm, *s.* An Arabian idiom or phrase.

**ARABIST**, ar'a-bist, *s.* One skilled in Arabian literature.

**ARABLE**, ar'a-bl, *s.* (*aro*, I plough, Lat.) Land fit for tillage.

**ARABO-TEDESCO**, a-ra'bo-ted-es'ko, *s.* (*Arabo*, and *Tedesco*, German, Ital.) A style of architecture, consisting of Moorish or Low Grecian, with German-Gothic.

**ARACK**, } ar'ak, *s.* (an Indian word.) A spirituous  
**ARAC**, } liquor procured by the distillation of juice  
extracted from the cocoa-nut tree.

**ARACHIS**, ar-a'kis, *s.* (*a*, without, and *rhakis*, a branch, Gr.) Earth-nut, a genus of papilionaceous plants, the pods of which, as they increase in size, force themselves into the earth, where the seeds become ripened; they are very much cultivated in America and other countries; the seeds abound in oil.—Order, *Leguminosae*.

**ARACHNIDA**, ar-ak'ne-da, } *s.* (*arachne*, a spider,  
**ARACHNIDES**, ar-ak'ne-des, } and *eidōs*, like, Gr.)

The name given by Cuvier to his second class of the *Articulata*, comprehending the spiders, mites, and scorpions.

**ARACHNODERMA**, ar-ak-no-der'ma, *s.* (*arachne*, and *derma*, skin, Gr.) A name given by Blainville to *Medusae*, which have the skin so extremely fine, as to resemble a spider's web.

**ARACHNOID**, ar-ak'noyd, *a.* (*arachne*, a spider, and *eidōs*, like, Gr.) Applied in natural history to things which are like a spider's web. It is used in both Botany and Zoology, as *Semper vivum Arachnoideum*; *Spondylii Arachnoidea*, *Astrea Arachnoidea*.

**ARACHNOID MEMBRANE**, ar-ak'noyd mem'brane, *s.* In Anatomy, a cobweb-like membrane, which forms one of the tunica or coats of the brain, situated between the dura and pia mater.

**ARACHNITIS**, ar-ak-ne'tis, } *s.* Inflamma-

**ARACHNOIDITIS**, ar-ak-noyd'e-tes, } tion of the  
arachnoid membrane.

## ARACHNOLOGY—ARANEIDANS.

**ARACHNOLOGY**, ar-ak-nol'o-je, *s.* (*arachne*, and *logos*, a discourse, Gr.) That part of natural history which treats of spiders.

**ARACHNOPHILUS**, ar-ak-nol'e-lus, *a.* (*arachne*, and *philo*, I love, Gr.) The fungus *Issaria Arachnophila*, is so called, because it grows on the bodies of dead spiders.

**AREOSTYLE**, a-re-os'tile, *s.* (*araios*, wide, and *stylos*, a column, Gr.) In Architecture, one of the five proportions for regulating the intercolumniations or intervals, which ought to be observed between porticos and colonnades. The interval now used is equal to four diameters. It is, or rather ought to be, only used in the Tuscan order.

**AREOSYSTILE**, a-re-o-sis'tile, *s.* (*araios*, wide, *syn*, with, and *stylos*, a column, Gr.) In Architecture, a term used by French architects to denote the proportioning of the spaces between columns when arranged in pairs. It is used in the west front of St. Paul's.

**ARAIGNEE**, a-ray-in-yay, *s.* (French.) In Fortification, a branch, return, or gallery of a mine.

**ARAISE**, a-raze', *v. a.* To raise.—Obsolete.

I have seen a medicine  
That's able to breath life into a stone,  
Quicken a rock, and make you dance canary  
With spritely fire and motion, whose simple touch  
Is powerful to raise King Pepin.—*Shaks.*

**ARALIA**, a-ra'le-a, *s.* (etymology unknown.) A genus of North American herbs and shrubs, with compound leaves and umbellate white flowers, usually disposed in panicles: Type of the order, *Araliaceae*.

**ARALIACEAE**, a-ra-le-a'se-e, *s.* A natural order of Exogens, class *Calyciflorae*. The *Araliaceae* approximates to the *Umbellifere*, but differs from it in the inflorescence being often imperfectly umbellate; in the styles being unusually numerous, the fruit being baccate; in the parts of the fruit not being separable; the albumen fleshy, and the embryo nearly the length of the albumen. The flowers are without beauty, but the foliage is extremely fine. The bark of some of the species exudes a gum resin; and the Ginseng, so famous as a drug, is the produce of *Panax*, one of the genera.

**ARAMÆAN**, ar-a-me'an, } *s.* (*aram*, highland, Heb.)

**ARAMAIC**, a-ra-ma'ik, } Applied to the language  
formerly spoken in the higher regions of Syria, a tract of country bounded by the mountain-range of Taurus on the north, Phœnicia on the west, Palestine on the east, and Arabia Deserta on the south. *Aramaic* now only survives as a living tongue among the Syrian Christians in the neighbourhood of Mosul.

**ARANEIDES**, ar-a-ne'e-des, } *s.* (*arenea*, a spider,

**ARANEIDÆ**, ar-a-ne'e-de, } Lat. and *eidōs*, like,

**ARANEIDANS**, ar-a-ne'e-danz, } Gr.) A family of

the class *Arachnides*, embracing the various genera of spiders. Spiders have the mouth furnished with short horny jaws; lip rounded at the apex; feelers two, incurved and jointed; eyes eight, or rarely six; feet eight; the abdomen pedicellate, and the arms furnished with four or six spinarets. They fix the ends of their threads by applying their spinning papillæ to any substance, and the thread lengthens as the animal recedes from it. They are enabled to stop the issue of the thread by contracting the papillæ, and can reascend it by means of their claws.

*a-ray-ne-e-fawm, a. (aranea, a spider, a shape, Lat.)* An epithet given by the hexapod carnivorous larvæ, which are long and fitted for suction, and to the motions; in which respects they resemble Arachnides.

*LA, a-ray-ne-e-fawr-me-a, s.* A name given to a family of the Heteropoda, which has a spider-like form of the animals of this tribe.

*AR-A-GO-A'SE-E, s.* (In honour of M. Arago, a celebrated French astronomer.) A class of exogenous plants, class Corollifloræ, of the single genus Arago; beautiful shrubs, natives of the Santa Fe de Bogota, in New Granada. The leaves are small, coriaceous, and imbricated; the flowers are small, tubular-shaped, axillary, solitary, nearly white.

*ARAYNE, a-ray-ne-o'sa-u're-na, s. (Latin.)* A web of a spider's web.

*ARAYNE-O-SUS, a.* Applied to a body of hairs, crossing each other like the web.

*ARAYNE-OS, a. (aranea, a spider, Lat.)* A cobweb.

*ARAYNE, s.* Large beads formed from iron, formerly much used in the African trade.

*ARAYNE, s. (aratio, Lat.)* The act or process of tilling. Lands are said to be under tillage.

*ARAYNE, s. (Latin.)* A ploughman; an arator.

*ARAYNE, a.* Contributing to tillage.

*ARAYNE-KA-RE-A, s. (Araucarias, a tribe of the southern parts of Chili.)* A genus of trees, with very rigid branches, and pointed, or stiff, spreading or lanceolate cones contain large seeds. *Araucarias* are found in the coal formation. At present confined to a few species, inhabiting the mountains of Chili.

*ARAYNE-JE-A, s. (after Antonia de Araujo.)* twining herbaceous plants, with white flowers of Brazil: Order, Asclepiadaceæ.

*ARAYNE-LIST, s. (arcus, a bow, and balista, or shooting darts with, Lat.)* A cross-bow.

described by William Breto, that the *arcubalista*, first showed to the French by our King, who was shortly after slain by a *balista*.—Cassini.

*ARAYNE-LIS-TURZ, s. pl.* A name given to those who, in ancient times, were armed with bows.

*ARAYNE-TUR, s. (Latin.)* An umpire; a person to whose decision opposing parties submit the settlement of a dispute; a judge. One can only judge according to usages of the law. An *arbitrator* is permitted to use his discretion in accommodating differences.

extinguish him, high *arbitrator*, chance governs all.—Milton.

judge.—We now use *arbitrate*.

*ARAYNE-TRE-BL, a. (French.)* Arbitrating upon the will; determinable.

*ARAYNE-TRAL, a.* Belonging to arbitration.

**ARBITRAMENT, ár-bit'tra-ment, s.** Will; determination; choice.

**NOTE.**—Dr. Johnson says this word should be written *arbitrament*. Milton spells it so in these lines:—

Stand fast! to stand or fall,  
Free in thine own *arbitrament* it lies.

**ARBITRARILY, ár-be-tra-re-le, ad.** With no other rule than the will; despotically; absolutely.

**ARBITRARINESS, ár-be-trar-e-nes, s.** Despoticalness; tyranny.

**ARBITRARIOS, ár-be-tra-re-us, a. (arbitrarius, Lat.)** Arbitrary; depending on the will; despotical.

**ARBITRARIOUSLY, ár-be-tra-re-us-le, ad.** Arbitrarily; according to mere will and pleasure.

**ARBITRARY, ár-be-tra-re, a. (arbitrarius, Lat.)** Despotical; absolute; bound by no law; following the will without restraint; depending on no rule; capricious; held at will or pleasure; voluntary, or left to our choice.

**ARBITRATE, ár-be-trate, v. a. (arbitror, Lat.)** To decide; to determine; to judge of;—*v. n.* to give judgment.

It did *arbitrate* upon the several reports of sense.—Smith.

**ARBITRATION, ár-be-tra'shun, s.** The determination of a cause by a judge mutually agreed on by the parties contending; decision. In Law, a contract by which two or more parties engaged in a dispute agree, by an instrument called a submission, to leave the decision to a third party, called an *arbitrator* or *arbitrator*. The proper objects of arbitration are those as to questions of fact. A debt defined by a deed is not a proper subject. When there are more than one arbitrator, there is generally authority given to choose an umpire when they cannot mutually come to a decision. If the submission contain a clause of registration, the decree-arbitral can be enforced as if it were a decree of court. To award to a thing that is illegal, or that cannot be done by the parties, is void, otherwise the courts will not relieve a person who has voluntarily submitted his case to arbitration, from the consequences of the decision, except where corruption or mistake is proved. *Arbitration of Exchange*, in Commerce, is the deduction of a proportion or arbitrated rate of exchange, between two places through an intermediate place, in order to ascertain the best method of drawing or remitting.

**ARBITRATOR, ár-be-tra'tur, s.** An extraordinary judge between party and party, chosen by mutual consent; a governor; a president; one who has the power of prescribing to others in a despotical manner, or of acting entirely by his own choice; the determiner.

The end crowns all,  
And that old common *arbitrator* Time,  
Will one day end it.—Shaks.

**ARBITRESS, ár-be-tres, s. (arbitratrix, Lat.)** A female judge.

**ARBITREMENT, ár-bit're-ment, s.** Decision; determination; compromise.

**ARBOR, ár'bor, s. (Latin.)** A tree. In Mechanics, the axle or spindle on which a wheel revolves.

**ARBORARY, ár'bo-ra-re, a. (arborarius, Lat.)** Of or belonging to a tree.

**ARBORATOR, ár'bor-ay-tur, s. (arborator, Fr.)** A planter or dresser of trees.—Not used.

## ARBOR-CHUCK—ARBUSTIVE.

**ARBOR-CHUCK**, ărb'or-tshuk, *s.* In Mechanics, a chuck, consisting merely of a spindle, generally made of metal, projecting from the mandril of the lathe, used in turning and polishing rings, hollow cylinders, &c.

**ARBOR DIANÆ**, ărb'or di'an-e, *s.* (Latin.) The tree of Diana. A name given to a beautiful arborescent arrangement which takes place in a vessel containing a solution of the nitrate of silver when mercury is thrown into it. A very good proportion for the experiment is twenty grains of lunar caustic to six drams or one ounce of water. It has also been termed *Arbor philosophorum* and *Arbor mineralis philosophica*.

**ARBOREOCULTURE**, ărb-or-e-kul'ture, *s.* (*arbor*, and *cultus*, I cultivate, Lat.) The art of cultivating trees and shrubs for wood or ornamental purposes.

**ARBOREOUS**, ărb-bo're-us, *a.* (*arbor*, Lat.) Belonging to trees; constituting a tree, as distinguished from frutescent.

**ARBORESCENT**, ărb-bo-res'sent, *a.* (*arborescens*, Lat.) Growing like a tree; having a tendency to become a tree.

**ARBORET**, ărb'bo-ret, *s.* (*arbor*, a tree, Lat.) A small tree or shrub.

Now hid, now seen,  
Among thick *arborets* and flowers,  
Embroidered in.—*Milton*.

**ARBORETUM**, ărb-bor'et-um, *s.* In Gardening, a place in a park, pleasure-ground, or nursery, in which a collection of trees, consisting of one of each kind, is cultivated.

**ARBORIFORM**, ărb'bo-re-fawrm, *a.* Having the form of a tree.

**ARBORISED**, ărb'bo-rized, *a.* Applied to agates which have the ramified appearance of plants, due to the infiltration of water charged with metallic oxides.

**ARBORIST**, ărb'bo-ris't, *s.* A naturalist who makes trees a particular object of his study.

**ARBORIZATION**, ărb-bo-re-za'shun, *s.* In Mineralogy, a term applied to an arborescent aggregation of crystals; also, to the dendritic form, presented in certain schistose limestones, or other rocks, due to the infiltration of the oxide of iron or manganese into the laminae of the stone. The same appearance is often observable in agates.

**ARBOROUS**, ărb'bo-rus, *a.* Belonging to a tree.

**ARBOR SATURNI**, ărb'bor sa'tur-ni, *s.* (Latin.) The tree of Saturn. A peculiar arborescent arrangement, obtained by dissolving one part of the protoxide of lead in twenty-four of water, and suspending a piece of zinc in the solution by means of a thread.

**ARBOR SCIENTIÆ**, ărb'bor si'en-she-e, *s.* (Latin.) The tree of Science; a general distribution or scheme of science, or knowledge.

**ARBOUR**, ărb'bur, *s.* A bower; a seat shaded with trees.

**ARBOR-VITÆ**, ărb'bor-vi'te, *s.* (*arbor*, and *vitæ*, life, Lat.) In Anatomy, a name given to the medullary ramifications of the brain, as seen when the cerebellum is cut vertically. In Botany, the *Thuya occidentalis*.—See *Thuya*.

**ARBUSCLE**, ărb'bus-kl, *s.* (*arbuscula*, Lat.) Any little tree.

**ARBUSCULAR**, ărb-bus'ku-lar, *a.* Composed of small trees or shrubs.

**ARBUSTIVE**, ărb-bus'tive, *a.* Covered with, or containing shrubs.

## ARBUTE—ARCADIAN.

**ARBUTE**, ărb'but, } *s.* (*arbutus*, Lat.) The  
**ARBUTUS**, ărb'bu-tus, } berry tree, a genus of  
having fruit resembling that of the straw  
The *arbutus* is a native of the Levant and  
south of Europe. In our gardens, it is a  
evergreen tree, with greenish yellow blo  
and red or bright yellow berries. The a  
forms groves of great beauty at the lakes o  
larney in Ireland: Order, Ericacee.

**ARBUTEAN**, ărb-bu'te-an, *a.* Made or compo  
arbute.

*Arbutean harrows, and the mystic van.—*  
*Ecclg's V*

**ARC**, ărk, *s.* (*arcus*, Lat.) In Geometry, a se  
or part of a circle. Every arch is greater  
its chord, but when concave to the chord th  
out, is less than the sum of the sides of ar  
tilinear figure which contains it. If  $x$  an  
the co-ordinates of any point in a curve, th  
mon method of finding the arch is by the in  
tion of the formula  $\sqrt{dx^2 + dy^2}$ , or, in th  
guage of the fluxional calculus, fluent of  $\sqrt{x^2$   
—an arch.

Load some old church with old theatric stat

**Equal arcs** are those which contain the  
number of degrees, and whose radii are  
**Diurnal arc**, in Astronomy, is that part  
circle described by a celestial body, betw  
rising and setting, as the *nocturnal arch*  
described between its setting and rising.  
*of progression or direction*, an arc of the  
which a planet appears to pass over wh  
motion is according to the signs.

**ARCA**, ărk'a, *s.* (*arca*, an ark or chest, Lat.)  
**Arks**, a genus of bivalved Mollusca, the sh  
which are transverse, and nearly equal in

ARISTOCRATICALNESS, ar-ris-to-krat'e-kal-nes, s. An aristocratical condition or disposition.

ARISTOCRATY, ar-ris-tok'kra-te, s. Aristocracy.—Not used.

ARISTOLOCHIA, ar-ris-to-lo'ke-a, s. (*aristos*, best, and *lockeia*, parturition, Gr.) A genus of plants, including several species which obtain a place in our pharmacopœias for their medicinal virtues, among which are *A. anguicida*, snake-killing birthwort; *A. clematidis*, a British species, slightly diaphoretic; and *A. serpentarius*, thought to increase the efficacy of cinchona in cases of protracted ague.

ARISTOLOCHLE, ar-ris-to-lok'i-e, s. A natural order of plants, with hermaphrodite flowers; a superior tubular calyx, with three segments; ten or twelve epigynous stamens, distinct, or adhering to the style and stigma; an inferior three or six-celled ovary, with numerous ovules attached horizontally to the axis; the style simple; the stigmas radiating, and of the same number as the cells of the ovary. Fruit dry or succulent, three or six-celled, and many seeded. The order consists of herbaceous plants or shrubs, the latter often climbing; the leaves are alternate, simple, and stalked; the flowers axillary, solitary, and usually brown, or of some dull colour. The only British species is *Aristolochia clematidis*, or birthwort; the leaves of which are heart-shaped; the stem erect; the flowers aggregate and upright, with a unilateral calyx. The wood of the plants of this order differs from other dicotyledonous plants, in not being arranged in concentric circles, but continues to increase in uniformity, and uninterruptedly, as long as the plants grow.

ARISTOTELIAN, ar-ris-to-te'le-an, s. Pertaining to, or founded on, the philosophy taught by Aristotle;—s. a follower of the philosophy of Aristotle. The Aristotelians were also designated Peripatetics, and their philosophy long prevailed in the schools, till it gave place to the Newtonian.

## ARISTOTELIC—ARK.

**ARISTOTELIC**, ar-ris-to-tel'ik, *a.* Relating to the philosophy of Aristotle.

**ARITHMANCY**, ar-rith'man-se, *s.* (*arithmos*, number, and *mantia*, divination, Gr.) A foretelling of future events by numbers.

**ARITHMETIC**, ar-ith-met'ik, *s.* (*arithmos*, number, and *metreo*, I measure, Gr.) The science of numbers; the art of computation by figures. *Integral Arithmetic* is the science of whole numbers. *Fractional Arithmetic* is divided into Vulgar and Decimal Fractions.—Which see. The figures and method of notation now in use are said to be of Arabic origin.

**ARITHMETICAL**, ar-ith-met'e-kal, *a.* According to the rules of arithmetic. *Arithmetical complement*, is that which a number wants of the next highest decimal denomination, as, 7 wants 3 of 10, 3 is the arithmetical complement. *Arithmetical complement of a logarithm*, is the sum or number which a logarithm wants of 10,000,000; thus, the arithmetical complement of the logarithm 8,154,032 is 1,845,968. *Arithmetical mean*, is that number or fraction which lies between two others, and is equally distant from both: it is found by dividing the sum of the two numbers by two. *Arithmetical progression*, is a series of numbers which increase or decrease by equal steps, the difference between any two successive terms being common to all the terms. *Arithmetical proportion*, is the relation which exists between four numbers, of which the first and last have the same difference as the third and fourth, as—1, 2, 81, 82.

**ARITHMETICALLY**, ar-ith-met'e-kal-le, *ad.* In an arithmetical manner; according to the principles of arithmetic.

**ARITHMETICIAN**, ar-ith-me-tish'an, *s.* One skilled in arithmetic.

**ARK**, ark, *s.* (*arca*, Lat. *arka*, Goth. *arc*, Sax. *airc*, Gael.) A chest or coffer:—The coffer, termed by Moses the *ark of the covenant*, was deposited in the innermost and holiest part of the tabernacle, called 'the holy of holies,' and afterwards in the corresponding apartment of the temple. It contained the tables of the law, the rod of Aaron, and a copy of the book of the law. The lid of the ark was called the mercy-seat, before which the high-priest appeared once every year on the great day of expiation; and the Jews, wherever they worshipped, turned their faces towards the place where the ark stood. 'Similar arks appear to have been used by the Egyptian priesthood, some of which,' says Sir J. G. Wilkinson, in his work on the Religion and Agriculture of the Ancient Egyptians, 'contained the emblems of Life and Stability, which, when the veil was drawn aside, were partially seen; and others presented the sacred beetle to the sun, overshadowed by the wings of two figures of the goddess Thenei or Truth, which call to mind the cherubim of the Jews.' 'The discoveries of this sort,' adds the Rev. Dr. Morren, (*Kitto's Cyclopædia of Biblical Literature*), 'which have been lately made in Egypt, have added an overwhelming weight of proof to the evidence which previously existed, that the *tabernacle made with hands* bore a designed external resemblance to the Egyptian models, but purged of the details and peculiarities which were most open to abuse and misconception.'—*Noah's ark*, a vessel built in the form of a parallelogram, three hundred cubits long, fifty cubits broad, and thirty cubits high,

nianism.

ARMINTIANISM, *ăr-min'e-an-izm*, *s.* The doctrines  
taught by Arminius, a native of Holland, born in  
1560, died in 1609. 1st, He denied the Calvin-  
istic doctrine of predestination, and taught that  
Christ had, by his death and sufferings, made an  
atonement for every man, but that only such as  
repent and believe can be saved. 2d, That true  
faith cannot proceed from the exercise of our na-  
tural faculties, and therefore the regenerating and  
renewing influences of the Holy Spirit are neces-  
sary, it being the gift of God through Jesus Christ.  
3d, That this divine grace or energy, which heals  
the disorders of a corrupt nature, begins, advances,  
and brings to perfection everything that can be  
called good in man; and, consequently, all *good* in  
man is to be considered as the work of God. 5th,  
That they who are united to Christ by faith are  
furnished with abundant strength to enable them  
to overcome the seductions of sin and Satan; but  
whether such may fall away, has not been resolved  
upon. These tenets are held by the large body of  
Christian Dissenters, called Wesleyan Methodists.

BAGSHOT SAND, *bag'shot sand*, *s.* In Geology, one of the newest of the English tertiary forma- tions, consisting of extensive beds of sand, con- taining a few marine shells. They occur at Highgate and Hampstead, Purbright and Frimley Heaths, in Surrey, and on Bagshot Heath. Ac- cording to Dr. Mantell, the boulders and masses of sandstone, which are abundant in some of the chalk valleys, and on the flanks of the Downs, are called Sardenstone or Druid Sandstone, from being the principal material employed in the construc- tion of Stonehenge, and other Druidical monu- ments. They are supposed to have been derived from the sandbeds which overlie the London clay, in the places above-mentioned: they may, however, have belonged to the sands which lie beneath the clay and chalk. The wastes and unproductive heaths round London are the sites of those arena- ceous deposits, which form the subsoil of Hamp- stead Heath. The gravel and shingle mixed up with the sand, according to the same authority, have been derived from the ruins of the chalk formation.—*Wonders of Geology*.

# BAY—BAYONET.

**BAY, bay, s.** (*bayo*, Span *bai*, Fr.) A colour in-  
 clining to chestnut, and termed, according to its  
 shades, light or dark. The word is used almost  
 solely in reference to the colour of horses. All  
 bay horses have black manes. This distinguishes  
 the bay from the sorrel, the manes of which are  
 red or white. The *gilded bay* is somewhat of a  
 yellow colour. The *chestnut bay* approaches the  
 chestnut. The word *bay* (from *aboy*, Fr.) signifies  
 also the state of anything surrounded by enemies,  
 and obliged to face them through inability to make  
 an escape—as, in Hunting, dogs are said to be *at*  
*bay* when the game turns round upon them. In  
 Architecture, (from *bau*, Ger.) one of the compart-  
 ments between the ribs of a groined roof; the  
 main timbers of a common roof; the square be-  
 tween the buttresses of a wall, or between the  
 mullions of a window, the term is also used to  
 signify the magnitude of a building, as, if a barn  
 consists of a floor and two heads, where corn is  
 laid, it is said to be a barn of two *bays*. The  
 term is more properly applied, however, to the  
 place between the floor and the end of the build-  
 ing, or to a low enclosed place in which corn or  
 hay is deposited. In Naval Architecture, the *bay*  
 is that part on each side between decks situated  
 between the bitts. It seems to mean the room of  
 a house in the following passage:—

If this law hold in Vienna ten years, I'll rent the fair-  
 est house in it after threepence a *bay*.—*Shaks.*

**Bay** (*baio*, Gr.) or more frequently *bays*, is used  
 as a poetical name for any honorary crown or gar-  
 land, bestowed as a prize for any kind of victory  
 or excellence; or, figuratively, for learning itself.  
*Bay-tree*, a species of laurel, of the leaves of which  
 bays or coronal wreaths were made. In Geo-  
 graphy, a *bay* (*baie*, Ital.) is a portion of the sea  
 extending into the land, the shore of which is  
 generally of a curved appearance; but the term  
 is applied generally to openings into the land  
 which are less than a gulf, and wider at the  
 entrance than internally, and larger than a creek.  
 A pond-head or pond, formed for serving water  
 for impelling machinery, is sometimes called a  
*bay*. *Bay-salt*, salt made by exposure of sea-  
 water to evaporation from the rays of the sun or  
 action of the atmosphere. *Bay-window*, a curved  
 window projecting outwards. *Bay-yarn*, a name  
 given sometimes to woollen yarn.—Obsolete.—  
*v. n.* (*aboyer*, Fr.) to bark as a dog at the game  
 he is pursuing; to encompass; to shut in;—*v. a.*  
 to follow with barking; to bark at.

**BAYARD, ba'ard, s.** A bay horse; also, a common  
 name for a horse of an inferior sort; a stupid  
 person, who gapes and gazes at an object; an  
 unmannerly beholder.

**BAYARDLY, ba'ard-le, a.** Stupid; blind.

A blind credulity, a *bayardly* confidence.—  
*Sp. Taylor*

BEAD, bead, *s.* (*bead*, a prayer, Sax.) A small per-  
forated ornament made of glass, coral, pearl, ebony,  
&c., of which necklaces and rosaries are manufac-  
tured. In Architecture, a moulding having a cir-  
cular section, used frequently on each fascia of an  
architrave, as also in the mouldings of doors,  
shutters, skirtings, imposts, and cornices. When  
the bead is flush with the surface, it is termed a  
*quirk bead*; and when raised, a *cock bead*. *Bead*  
and *butt work* is framing in which the panels are  
flush, the beads being stuck or run upon the two  
edges, the beads running in the direction of the  
grain of the wood. *Bead*, *butt*, and *square work*,

firm, not to sink, not to faint or fail; *to bear with*, to endure an unpleasant thing.

**BEAR**, bare, *s.* (*bera*, Sax. *bar*, Germ.) The common name of the genus *Ursus*. Bears are large clumsy animals, with strong limbs; they dig caves for their residence, in which they pass the winter in a half torpid state, and without taking any food. For their generic characters, see *Ursus*, *Great* and *Little Bear*, the two northern constellations, *Ursus Major* and *Minor*. Bear is a word still in use to denote a certain description of stock-jobbers. The origin of the term is thus described by Dr. Warton:—

'He who sells that, of which he is not possessed, is proverbially said to sell the skin before he has caught the bear.' It was the practice of stock-jobbers, in the year 1720, to enter into a contract for transferring South Sea stock at a future time for a certain price; but he who contracted to sell, had frequently no stock to transfer; nor did he who bought intend to receive any in consequence of his bargain: the seller was therefore called a bear, in allusion to the proverb, and the buyer a bull, perhaps only as a similar distinction. The contract was merely a wager to be determined by the rise or fall of stock; if it rose, the seller paid the difference to the buyer, proportioned to the sum determined by the same computation to the seller.'

**BEARABLE**, bare'a-bl, *a.* That can be borne or tolerated.

**BEARABLY**, bare'a-ble, *ad.* In a bearable manner; in a way that can be endured.

tion, by writing on the leaves of plants.  
**bot'a-ne, s.** (*botane*, a plant, Gr.) The  
which comprehends all that relates to the  
kingdom. Plants are classed, in the  
system, according to the number and  
osition, or degree of combination, of their  
and styles. In the natural system, they  
ed into **VASCULARES** and **CELLULARES**,  
ulares being composed of woody fibres  
lar tissue—the **Cellulares**, of cellular tis-  
e. These are divided according to their  
fructification, or their organs of nutrition.

## Division I.—VASCULARES.

**I. DICOTYLEDONS or EXOGENS.** The  
this class have stems consisting of con-  
yers, formed by external annual additions,  
composed of vascular and cellular tissue;  
consists of two cotyledons or seed-lobes;  
s are netted, as in the thorn and rose,  
the *Gymnosperms* or pines, netted or  
the flowers are sexual, that is, are fur-  
ish male and female organs of reproduc-  
ed stamens and pistils.

**II. MONOCOTYLEDONS or ENDOGENS.**  
s of this class are formed by the addition  
bres to the interior of the stem already  
the veins of the leaves are parallel, and  
ed; flowers sexual, the seed consisting of  
edon.

## Division II.—CELLULARES.

**I. SEMI-VASCULARES, or ACROGENS.**  
**I. SEMI-VASCULARES.** Plants having  
a well as cellular tissue; the stems are  
by simple elongation; the leaves veined  
ed; the sexual organs distinct and visible  
e microscope only, but formed on a plan  
ifferent from that of flowering plants.  
s belong to this class.

**II. THE AGAME.** Plants which increase  
tion or irregular expansion of their parts,  
lly composed of cellular tissue, showing,  
e microscope, no sexual organs whatever.  
nsist of the fungi, mosses, lichens, he-  
e liverworts, and algæ. The *Dicotyle-*  
divided into four subclasses—the *Tha-*  
*Calycifloræ*, *Corollifloræ*, and *Monoc-*  
*æ*. The three first of these, collectively  
e *Dichlamydeæ*, are distinguished by a  
oral envelope, that is, by their flowers  
th a calyx and corolla; and the last, by  
lower envelope, termed a perianth. The  
form have the stamens placed under the  
, and inserted into the receptacle, as in  
eculus, pink, and mallow. The *Caly-*  
see the stamens inserted on the calyx, as  
a-rose and apple. The *Corollifloræ* have  
ns attached to the corolla, as in the prim-  
potato.

**Linnean system of Classification,** now  
acknowledged and adopted, is founded  
umber, situation, and proportion of the  
and pistils. The following twenty-  
es owe their distinctions principally to

the stamens:—1. *Monandria*, one stamen. 2.  
*Diandria*, two stamens. 3. *Triandria*, three. 4.  
*Tetrandria*, four. 5. *Pentandria*, five. 6. *Hex-*  
*andria*, six. 7. *Heptandria*, seven. 8. *Octan-*  
*dria*, eight. 9. *Enneandria*, nine. 10. *Decan-*  
*dria*, ten. 11. *Dodecandria*, twelve. 12. *Icosan-*  
*dria*, twenty or more stamens, inserted into the  
calyx. 13. *Polyandria*, all above twenty inserted  
into the receptacle. 14. *Didynamia*, four stamens,  
two long and two short. 15. *Tetradynamia*, six  
stamens, four long and two short. 16. *Monadel-*  
*phia*, the stamens united into one body by the  
filaments. 17. *Diadelphia*, the stamens united  
into the bodies by the filaments. 18. *Polyadel-*  
*phia*, the stamens united into three or more bodies  
by the filaments. 19. *Syngenesia*, anthers united  
into a tube. 20. *Gynandria*, stamens inserted  
either upon the style or germen. 21. *Monœcia*,  
stamens and pistils in separate flowers, but on the  
same plant. 22. *Diœcia*, stamens and pistils, like  
the former, in separate flowers, but on two sepa-  
rate plants. 23. *Polygamia*, stamens and pistils  
separate in some flowers, united in others, either  
on one, two, or three distinct plants. 24. *Crypt-*  
*ogamia*, stamens and pistils, either not well as-

ONY, kal-sid'o-ne, *s.* (from Calcedon, in Upper Macedonia, where it was collected in ancient times.) Mineral composed of 84 parts of silica, and 16 parts of lime, frequently botryoidal or stalactitic, translucent, and of various colours. Varieties are onyx, plasma, heliotrope or blood-chrysochryse, cacholong, cornelian, and

SLIPPER, kal-se-o'la, *s.* (*calceolus*, a small slipper, a genus of Mollusca of the oyster family, the valve shell of which is somewhat slipper-shaped.) It is placed by Cuvier between the Sphæroides and the Hippurites.

SLIPPER, kal-se-o-la're-a, *s.* (*calceolus*, a slipper, the form of the corolla.) Slipperwort, a genus of plants from South America, now extensively cultivated as ornamental garden flowers: Scrophulariaceæ.

SLIPPER, kal-sif'ur-us, *a.* (*calx*, lime, and *fero*, I bear, Lat.) Producing lime.

SLIPPER, kal'se-fawrm, *a.* In the form of lime.

SLIPPER, kal-sim'u-rite, *s.* A chloretic calceolite.

SLIPPER, kal-si'na-bl, *a.* That may be calcined by the action of heat.

SLIPPER, kal'se-nate, *v. a.* To calcine.

SLIPPER, kal-se-na'shun, *s.* (French.) The act of subjecting a body to the action of fire, to an intense degree of heat, to drive off its volatile parts. The fixed residues of such bodies as undergo combustion are termed cinders, in common language; and calces, or more generally, by chemists.

SLIPPER, kal-sin'a-tur-e, *s.* A vessel used in the process of calcining.

SLIPPER, kal-sine', *v. n.* (*calciner*, Fr.) To reduce to calx by heat; to oxidize as a metal;—*v. n.* one a calx by the action of heat.

SLIPPER, kal'se-trate, *v. n.* (*calcitrosus*, Lat.) To calcine; to spurn.—Obsolete.

SLIPPER, kal'se-un, *s.* (*calx*, lime, Lat.) The mass of lime. It is of a whiter colour than the oxide of strontium, and on exposure to air is converted into lime. Its equivalent is 20.5. Its cal compounds are:—

SLIPPER, Protoxide of:—1 atom of calcium and 1 of oxygen = 8; atomic weight = 28.5.

SLIPPER, Peroxide of:—1 atom of calcium and 2 of oxygen; atomic weight = 36.5.

SLIPPER, Chloride of:—1 atom of calcium and 1 of chlorine = 35.42; atomic weight = 55.49.

SLIPPER, Iodide of:—1 atom of calcium and 1 of iodine = 126.3; atomic weight = 146.8.

SLIPPER, Bromide of:—1 atom of calcium and 1 of bromine = 78.4; atomic weight = 98.9.

SLIPPER, Fluoride of:—1 atom of calcium and 1 of fluorine = 18.68; atomic weight = 39.18.

SLIPPER, Sulphuret of:—1 atom of calcium and 1 of sulphur = 16.1; atomic weight = 36.6.

SLIPPER, Bisulphuret of:—1 atom of calcium and 2 of sulphur = 32.2; atomic weight = 52.7.

SLIPPER, Quinosulphuret of:—1 atom of calcium and 3 of sulphur = 80.5; atomic weight, 101.

SLIPPER, Phosphuret of:—1 atom of calcium and 1 of phosphorus = 15.7; atomic weight, 36.2.

SLIPPER, kal-ko-graf'e-kal, *a.* (*calx*, and *grapho*, Lat.) Relating to calcography.

CALCOGRAPHY—CALEFY.

CALCOGRAPHY, kal-kog'gra-fe, *s.* An engraving after the manner of a drawing in chalk.

CALCISINTER, kalk'sin-tur, *s.* The calcareous deposit of certain springs.

CALCISPAR, kalk'spar, *s.* Calcareous spar, or crystallized carbonate of lime.

CALCTUFF, kalk'tuf, *s.* A formation of carbonate of lime, from the deposits of springs, &c.

CALCULABLE, kal'ku-la-bl, *a.* That may be computed; ascertainable by calculation.

CALCULARY, kal'ku-lar-e, *s.* A congeries of little stony secretions, found in the pulp of pears and other fruits.

CALCULATE, kal'ku-late, *v. a.* (*calculer*, Fr. from *calculo*, Lat.) To compute; to reckon; to arrive at certain conclusions from a consideration of circumstances or events; to adjust; to project for any certain end;—*v. n.* to make a computation.

CALCULATION, kal'ku-la'shun, *s.* The act of computing several sums by means of addition, subtraction, multiplication, division, &c.; a reckoning; the result of arithmetical operation; an estimate formed in the mind from a consideration of conflicting data.

CALCULATIVE, kal'ku-la-tiv, *a.* Pertaining to calculation.

CALCULATOR, kal'ku-la-tur, *s.* One who has an aptitude for calculation; one who reckons or computes.

CALCULATORY, kal'ku-la-tur-e, *a.* Belonging to calculation.

CALCULE, kal'kule, *s.* Reckoning; computation;—*v. a.* the old English verb for calculate.—Obsolete.

Full subtilly he *calculated* all this.—Chaucer.

CALCULOUS, kal'ku-lus, *a.* Stony; gritty; hard like a stone.

CALCULUS, kal'ku-lus, *s.* (Latin.) A term applied to morbid concretions of a hard or stony consistence, which form in the bladder and other parts of the animal body. In Mathematics, the *differential calculus* is the finding an infinitely small quantity, which, being taken an infinite number of times, shall be equal to a given quantity.

CALDASIA, kal-da'she-a, *s.* (in honour of J. Caldas.) A genus of South American plants: Order, Polemoniaceæ, or Phloxworts.

CALDRON, kaw'drun, *s.* (*chaudron*, Fr.) A large boiler or pot.

CALEA, ka'le-a, *s.* (*kalos*, beautiful.) A genus of Composite plants, so named from their beautiful flowers: Suborder, Senecionidæ.

CALEACTE, kal-e-ak'te, *s.* (*kallos*, and *akte*, the sea-shore, Gr., from its beauty and habitat.) A genus of South American Composite plants: Suborder, Helianthaceæ.

CALEDONIAN, kal-e-do'ne-an, *a.* (from *Caledonia*, the ancient name of Scotland.) Relating to Scotland.

CALEFACIENT, kal-e-fa'shent, *a.* A term applied to substances which excite a degree of warmth in the parts to which they are applied; stimulant.

CALEFACTION, kal-e-fak'shun, *s.* (*calefactio*, Lat.) The act or process of heating; the state of being heated.

CALEFACTIVE, kal-e-fak'tiv, } *a.* That makes  
CALEFACTORY, kal-e-fak'to-re, } warm or hot;  
having the quality of heating.

CALEFY, kal'e-fi, *v. n.* (*califico*, Lat.) To grow hot; to be heated;—*v. a.* to make warm.

The Archbishop's grace of York, Douglas, and Mortimer,  
*Capitulate* against us, and are up.—*Shaks*.

CAPITULATION, ka-pit-u-la'shun, *s*. (French.) A  
series of articles expressing the conditions under  
which a fortress is given up to an enemy; the  
agreement or treaty by which an army surrenders  
to a stronger force, or binds themselves to evacuate  
the territory which it occupies; reduction into  
heads or articles.—Obsolete in the latter sense.

CAPITULATOR, ka-pit'u-la-tur, *s*. One who capit-  
ulates.

CAPITULE, kap'e-tule, *s*. (*capitulum*, Lat.) A sum-  
mary; a recapitulation.—Obsolete.

But a *capitule* on those things that ben said.—*Wicliffe*.

CAPITULUM, ka-pit'u-lum, *s*. (Latin.) In Botany, a  
species of inflorescence, called a head or tuft, formed  
of many flowers arranged in a globular form upon a  
common peduncle. In Anatomy, a small head or  
protuberance of a bone, received into the concavity  
of another bone. In the ancient military art, a  
transverse beam with holes, through which the  
cords passed, by which war engines were worked.  
This term is also used by ecclesiastical writers, to  
denote part of a chapter of the Bible read and ex-  
plained.

CAPIVI.—See Balsam.

CAPNITES, kap-ni'tes, *s*. A genus of plants: Order,  
Fumariaceæ, or Fumeworts.

CAPNOMANCY, kap'no-man-se, *s*. (*kapnos*, smoke,  
and *manteia*, divination, Gr.) Divination by the  
rising of smoke, as practised by the ancients in  
their sacrifices.

## CAPNOMOR—CAPRICIOUS.

## CAPRICIOUSLY—CAPS

**CAPNOMOR**, kap'no-mor, *s.* (*kapnos*, and *moira*, a part, Gr.) An unctuous, colourless substance, obtained from the tar of wood.

**CAPNOPHYLLUM**, kap-no-fil'um, *s.* (*kapnos*, and *phyllon*, a leaf, Gr.) A genus of Umbelliferous plants.

**CAPOCH**, ka-potsh', *v. a.* This word is used by Butler, though its meaning is not very obvious; perhaps, to strip off the hood.

*Capoch'd your rabins of the synod.—Butler.*

**CAPON**, ka'pn, *s.* (*capun*, Sax. from *capo*, Lat.) A castrated cock;—*v. a.* to castrate a cock.

**CAPONNIERE**, kap-o-nere', *s.* (French.) In Fortification, a passage protected on the right and left by a wall or parapet. The term is usually applied to that by which the communications are made across the main ditch of a fortress to the outworks, or from the covered way to the gorge of an advanced work.

**CAPOT**, ka-pot', *s.* (French.) A term used when one party wins all the tricks of cards at the game of picquet;—*v. a.* to win all the tricks of cards at the game of picquet.

**CAPOTE**, ka-pote', *s.* A boat cloak; an outer garment.

**CAPOUCH**, ka-pootsh', *s.* (*capuce*, Fr.) A monk's hood; the hood of a cloak.

**CAPPAREE**, kap-pa're-e, *s.* A tribe of the Capparidaceæ, embracing those species in which the fruit is a berry; the Cleomeæ having the fruit a capsule.

**CAPPARIDACEÆ**, kap-pa-re-da'se-e, } *s.* (*capparis*,  
**CAPPARIDÆ**, kap-pa-rid'e-e, } one of the  
genera.) A natural order of Exogens, consisting of herbaceous plants, shrubs, or trees, with alternate stalked, undivided, or palmate leaves; flowers solitary or racemous; four sepals; four or eight petals, imbricated or cruciate, commonly unguiculate and unequal; ovary stalked or sessile; fruit pod-shaped and dehiscent, or baccate.

**CAPPARIS**, kap'pa-ris, *s.* The Caper-tree, a genus of plants: Type of the order Capparidaceæ.

**CAPPER**, kap'pur, *s.* An old term for one who makes or sells caps.

**CAPRATE**, kap'rate, *s.* A compound produced by the union of the capric or capric acids and a metal.

**CAPRELLA**, ka-prel'la, *s.* A genus of Crustaceans: Order, Læmodipoda.

**CAPREOLATE**.—See Cirrhous.

**CAPREOLUS**, ka-pre'o-lus, *s.* (the tendril of a vine, Lat.) An old botanical name for the tendril of a plant.

**CAPRIC ACID**, kap'rik as'sid, *s.* An acid procured from the milk of the goat. It consists of 18 atoms of carbon, 14 of hydrogen, and 3 of oxygen.

**CAPRICCIO**, ka-pritsh'e-o, *s.* (Italian, whim, fancy.) An irregular composition in music, in which the composer is led by impulse or whim, regardless of all rule or restraint.

**CAPRICCIOSO**, ka-pritsh'e-o'zo, *s.* In Music, denotes that the movement before which it is written is to be played in a free and fantastic style.

**CAPRICE**, ka-prees', *s.* (French.) A sudden change of humour; freak; fancy; whim.

**CAPRICCHIO**, ka-prik'e-o, *s.* (from *caprice*.) A sudden whim; an impulse.—Obsolete.

*Will the capricchio hold in thee? art sure?—Shaks.*

**CAPRICIOUS**, ka-prish'us, *a.* Whimsical; fanciful; subject to impulse or sudden change; humour-some.

264

**CAPRICIOUSLY**, ka-prish'us-le, *ad.* In manner; whimsically.

**CAPRICIOUSNESS**, ka-prish'us-nes, *s.* of being led by caprice; whimsicalness.

**CAPRICORN**, kap're-kawrn, *s.* (*capricornus*, Lat.) In Astronomy, one of the twelve sign-diac, represented on globes in the form of a bull's head. It is the first of the winter, and the southern signs. The sun enters it at the end of December, at the winter solstice.

*Capricorn*, a small circle of the sphere, the equinoctial, passing through the first of Capricorn, or the winter solstice, or sun's greatest southern declination.

**CAPRIFICATION**, kap-re-fe-ka'shun, *s.* (*caprificatio*, Lat.) The process adopted in the means of which the fruit of the fig is matured and ripened. When the fig is becoming ripe, branches are taken from the fig-tree, containing large numbers of figs, and laid on the cultivated fig, which is pierced by the insects, for the purpose of depositing their eggs; the punctures producing action, and bring about an enlargement of the fig crop.

**CAPRIFOLIACEÆ**, kap-re-fo-le-a'se-e, *s.* (*caprifoliaceæ*, Lat.) A natural order of Exogenous plants, consisting of shrubby plants, with epipetalous stamens, anthers, bursting longitudinally; leaves stipules and consolidated fruit; flowers corymbose and sweet-scented.

**CAPRIFOLIUM**, kap-re-fo-le-um, *s.* (*caprifolium*, Lat.) A genus of plants, two species, *C. perfoliatum* and *C. periclymenum*, Honeysuckle, are British: Type of the order Caprifoliaceæ.

**CAPRIFORM**, kap're-fawrn, *a.* (*capra*, Lat., shape, Lat.) Having the form of a goat.

**CAPRIGENUS**, ka-prid'je-nus, *a.* (*capri-genus*, Lat.) Born of, or produced by a goat.

**CAPRIMULGIDÆ**, kap-re-mul'je-de, *s.* (*caprimulgidae*, Lat.) The Night-jar, or Night-hawk, more properly Moth-eaters.

**CAPRIMULGUS**, kap-re-mul'gus, *s.* (*caprimulgus*, Lat.) The Night-jar, or Night-hawk, more properly Moth-eaters.

**CAPRIMULGUS**, kap-re-mul'gus, *s.* (*caprimulgus*, Lat.) The Night-jar, or Night-hawk, more properly Moth-eaters.

**CAPRIOLE**, kap're-ole, *s.* (*cabriole*, Fr.) A dance, leaps which a horse makes in place without advancing; a dance.

**CAPRIPED**, kap're-ped, *a.* (*capra*, a goat, Lat.) Having feet like a goat.

**CAPROIC ACID**, kap-ro-ik as'sid, *s.* (*caproica*, Lat.) An acid obtained from the salt of baryta, by adding a clear oil to its solution. It is a clear oily liquid, having a sour smell like that of sweat, according to Chevreul, of 12 atoms of hydrogen, and 3 of oxygen.

**CAPROMYS**, kap'ro-mis, *s.* (*capra*, and *mys*, Lat.) A genus of South American rats.

**CAPSA**, kap'sa, *s.* (*capsea*, a case, Lat.) A genus of Mollusca, placed by Cuvier between *Petricola*, having two teeth on the one side, and a single but bifid one on the other; and

## CAPSELLA—CAPTIOUS.

the shell convex, and the fold indicative of the tractor of the foot considerable.

**C.**, kap-sel'la, *s.* A genus of Cruciferous Suborder, Notorhizeæ.

**C.**, kap'se-kum, *s.* Bird's pepper, a genus of plants, the seeds and fruits of which are powerful stimulants, and of which the con-called Cayenne pepper is made; Order, Ericæ.

**kap-size'**, *v. a.* To upset; to overturn.—*Drase.*

**ARES**, kap'skwayrz, *s.* Strong plates of iron some over the trunnions of a gun, and keep the carriage.

**kap'stan**, *s.* (*cabestan*, Fr.) A great piece of iron in the shape of a cone, usually placed at the windlass of a ship, to weigh anchors, or to strike down topmasts, strain ropes, or any heavy, bulky thing on board of a ship.

**it**, kap'su-lar, } *a.* Like a capsule;

**ET**, kap'su-la-re, } hollow like a chest.

**TE**, kap'su-late, } *a.* Enclosed in a

**it**, kap'shun, *s.* (*captio*, Lat.) When any

question at law or in equity is executed, the

persons subscribe their names to a certifi-

catifying when and where the commission

is executed, and this is called a *caption*; also,

when a man is arrested, the act of taking him is

called a *caption*. There is also the *caption* of an

instrument, which is the setting forth of the style

of a court before which the jurors made their

statement.—*Jacob.*

**it**, kap'shus, *a.* (*captiosus*, Lat. *captieux*;

Given to cavils; eager to object or inveigle;

as; ensnaring; disposed to urge objections.

## CAPTIOUSLY—CAPYBARA.

**CAPTIOUSLY**, kap'shus-le, *ad.* In a captious manner; with an inclination to cavil or find fault.

**CAPTIOUSNESS**, kap'shus-nēs, *s.* Inclination to find fault or censure; disposition to object; peevishness.

**CAPTIVATE**, kap'te-vate, *v. a.* (*captiver*, Fr. *captivo*, Lat.) To take prisoner; to bring into bondage; to charm; to overpower with beauty or excellence; to hold the heart in subjection; to enslave;—*a.* made prisoner—unusual in the last sense.

Wasted our country, slain our citizens,  
And sent our sons and husbands captive.—*Shaks.*

**CAPTIVATION**, kap-te-va'shun, *s.* The act of taking one captive.

**CAPTIVE**, kap'tiv, *s.* (*captivus*, Lat. *captif*, Fr.) A prisoner taken in war by an enemy; one charmed or ensnared by beauty or excellence; a slave;—*a.* made prisoner in war; kept in bondage or confinement;—*v. a.* to take prisoner; to bring into a condition of servitude.—Obsolete as a verb.

What further fear of danger can there be?  
Beauty, which captives all things, sets me free.—*Dryden.*

**CAPTIVITY**, kap-tiv'e-te, *s.* (*captivité*, Fr.) Subjection by the fate of war; bondage; servitude to enemies; slavery; subjection to love.

**CAPTOR**, kap'tur, *s.* (*captum*, to seize on, Lat.) One who takes a prisoner or a prize.

**CAPTURE**, kap'ture, *s.* (French, *capture*, Lat.) The act or practice of taking anything; the thing taken; a prize;—*v. a.* to take as a prize by force or stratagem.

**CAPUCHIN**, kap-ū-sheen', *s.* (*capuce*, *capuchon*, Fr.)

A female garment, consisting of a cloak and hood, made in imitation of the dress of capuchin monks; a pigeon whose head is covered with feathers, resembling a capouch.

**CAPUCHINS**, kap-ū-sheenz', *s.* (so called from the capuchin or cowl with which they covered their heads.) A fraternity of abstemious friars of the order of St. Francis. The capuchins dressed in brown or grey, went always barefooted, and refrained from shaving their beards.

**CAPULUS**, kap'u-lus, *s.* (*capula*, a cup, Lat.) A genus of Pectinibranchiate Gasteropods, with a patelliform shell, having a recurved and spiral summit: Type of the family Capuloida of Cuvier.

**CAPULOIDA**, kap'u-loi-da, *s.* (*capulus*, one of the genera, Lat.) A family of Pectinibranchiate Gasteropods, partly separated by Cuvier from the Patellas, which they resemble, in having a widely opened, scarcely turbinate shell, with neither operculum, emargination, nor siphon.

**CAPUT**, ka'put, *s.* (the Latin word for head.) A word in Anatomy, in several acceptations; as, *caput coli*, the head of the colon, the cæcum or blind intestine; *caput gallinoginis*, the woodcock's head, a little eminence on the uterus, at the termination of the ductus ejaculatoris; *caput mortuum*, a nearly obsolete term for the inert residuum of a distillation or sublimation; *caput Medusæ*, from the head of Medusa, the beautiful locks of which were converted into serpents; a name given to an existing species of Pentacrinite, *Pentacrinus caput Medusæ*.

**CAPYBARA**, ka-pib'a-ra, *s.* The Hydrochærus, or Water-cavy of Brazil, an animal allied to the Guinea-pig, about three feet in length, and having the general appearance of a hippopotamus in miniature.

CAR, *kār*, *s.* (*currus*, Lat. *carr*, a chariot, old Fr.)

A small carriage usually drawn by one horse. The Irish jaunting car is a sort of one horse chaise, generally made without springs, and so constructed that the people sit back to back, with their faces looking sideways. In poetical language, any vehicle of dignity or splendour; a chariot of war or triumph; the constellation termed Charles Wain, or the Bear.

CARABIDÆ, *ka-ra-bid'ē*, *s.* (*carabus*, one of the CARABICI, *ka-ra-bis'ē*, } genera, Lat.) A family of Coleopterous insects, of the section Pentamera. These beetles have the eyes prominent, and the head not so wide as the thorax; the terminal joints of the palpi are often compressed, and of an irregular shape; the mandibles are moderately long, large, and simple; they are generally large and richly coloured.

CARABINE, *kar'a-bin*, *s.* (*carrabine*, Fr. *carabina*, CARBINE, *kār-bīnē*, } Ital.) A short gun used by the cavalry, less in the bore and shorter in the barrel than a musket; it carries a ball of 24 in the pound.

CARABINEER, *kar-a-be-neer*, *s.* A light horseman carrying a carbine.

CARABUS, *kar'a-bus*, *s.* (*carabis*, a crab, Lat.) The Crab-beetles, a genus of Coleopterous insects, with elongated bodies, which are frequently bronzed, golden-green, coppery, or violet-coloured: Type of the tribe Carabidæ.

CARACK, *kar'ak*, *s.* (*caraque*, Fr.) A Portuguese term for a large ship of burden.

The bigger whale like some huge carack lay.—Waller.

CARACOL, *kar'a-kol*, *s.* (*caracole*, Fr. *caracolear*, Span.) In Horsemanship, an oblique tread, traced out in semicircles, changing from one hand to the other without observing a regular ground; also, the half turn which a horseman makes after his discharge to pass from front to rear. In Architecture, a term sometimes used to denote a staircase in the form of a helix or spiral;—*v. a.* to move in a caracol.

CARACOLLA, *ka-ra-kol'la*, *s.* A genus of the Luccinæ, land-volutes or lamp-snails, in which the aperture of the shell is circular; the two lips united; teeth wanting; umbilicus open: Family, Limacina.

CARACOLY, *kar'a-kol-le*, *s.* A term given to a metal used by the Caribbees and other savage tribes in making ornaments.

CARAGANA, *kar-a-gan'a*, *s.* (*Carachana*, in Tartary.) The Siberian Pea-tree, a genus of Leguminous Asiatic plants: Subtribe, Galegeæ.

CARAGUATA, *ka-ra-gu-a'ta*, *s.* (its name in South America.) A genus of plants: Order, Bromeliaceæ.

CARALLIA, *ka-ral'le-a*, *s.* (*Carallie*, in the Telinga language.) A genus of East Indian plants: Order, Rhizophoraceæ.

CARALLUMA, *ka-ral-lu'ma*, *s.* (its Indian name.) A genus of East Indian plants: Order, Asclepiadaceæ.

CARAMEL, *kar'a-mel*, *s.* (French.) A black or brownish sugar, produced by subjecting barley-sugar to a temperature of 400° to 430°. Its constituents are 12 atoms of carbon, 9 of hydrogen, and 9 of oxygen.

CARANAX, *ka-ra-naks*, *s.* The Scad, or Horse-mackerel, a genus of fishes which sometimes occur in immense quantities on the coasts of Eng-

land and Ireland. They are distinguished by lateral line of the body having a series of plates.

CARANAXOMORUS, *ka-ran-ax-om'o-rus*, *s.* of fishes: Family, Scomberidæ.

CARAPACE, *ka-ra'pase*, *s.* The unyielding shell which protects the body of Chelonians. It is composed of the dorsal and vertebræ, the sacrum and eight ribs is united. The term is also applied to the surface of the Crustaceans.

CARAPUS, *kar-a'pus*, *s.* A subgenus of teleost fishes, including such species of the genus as have long tapering tails, and compressed and furnished with scales.

CARAT, *kar'at*, *s.* (*carrat*, Fr. *carato*, Ital.) used in a relative sense to express the fineness of gold. It means the twenty-fourth part given weight of that metal, or of its alloy. If such a weight be pure gold, it is said to be 24 carats fine; if three-fourths only be gold, to be 18 carats fine. The diamond carat, ever, is a definite weight =  $3\frac{1}{8}$  troy grains; the pearl carat =  $\frac{1}{4}$  of a troy grain.

CARAVAN, *kar-a-van*, *s.* (*caravana*, Span. or Fr.) A troop or body of merchants or travellers with camels in the east for safety and convenience.

CARAVANSERA, *kar-a-van'se-ra*, *s.* A large building or inn, appointed for receiving lodging caravans. It is commonly a large building, in the middle of which there is a spacious court; and under the arches or that surround it there runs a bank, raised feet above the ground, where the merchants who travel with them in any capacity up their lodgings; the beasts of burden being to the foot of the bank.

CARAVEL, *kar'a-vil*, *s.* (*caravelle*, Fr. or CARVEL, *kar'vil*, } Ital.) A light, ror-fashioned ship, with a square poop, former in Spain and Portugal.

CARAWAY.—See CARUM.

CARBAZOTIC ACID, *kār-ba-zot'ik as'sid*, *s.* A peculiar acid formed from the action of nitric acid on vegetable and animal substances. It is the same substance with the bitter principle obtained by the action of nitric acid on silicic acid. According to Liebig, this acid is composed of 6 atoms of carbon, 6 of nitrogen, and 15 of oxygen.

CARBO, *kār'bo*, *s.* (*carbo*, coal, from the colour of its wings, &c.) The Cormorant, of water-fowl allied to the pelicans: Family, Phalacrocoracidae.

CARBO-CERINE, *kār-bo-se'rīne*, *s.* The oxide of cerium, a rare mineral occurring in the form of sided crystalline plates of a greyish white. It consists of oxide of cerium, 75.7; carbon, 10.8; water, 13.5.

CARBON, *kār'bon*, *s.* (*carbon*, Span. *carbón*, Fr.) The pure inflammable principle of charcoal. If a piece of wood or any vegetable be placed in a closed vessel, and kept for some time, it is converted into a shining brittle substance, possessing neither smell nor taste, known as charcoal. Charcoal is infusible in water, is capable of combining with hydrogen and sulphur, is a conductor of electricity, and has a powerful affinity for oxygen. It is obtained nearly pure in charcoal; but

## CARBONACEOUS—CARBUNCLE.

amongst that this elementary substance is in its purest form. Carbon enters as a constant part into many of the slate rocks, to which it really communicates a dark colour: it forms regular beds of considerable thickness, being the principal constituent part of coal combined with oxygen. Carbon forms carbonic acid, or fire.

**CARBONACEOUS**, kár-bo-na'shus, *a.* Containing carbon; pertaining to carbon.

**CARBONADO**, kár-bo-na'do, *s.* (*carbonnade*, Fr.) A stone used to cut across, to be broiled upon the coals; or, in his way willingly, let him make a carbonado.—*Shaks.*

**CARBONADO**, to cut or hack.—Obsolete.

**CARBONATE**, kár-bo-nate, *s.* A salt resulting from the combination of carbonic acid with a salifiable base.

When there is an excess of base, the compound is called a subcarbonate; and when two equivalents of carbonic acid unite with the base, it is termed a supercarbonate or bicarbonate. The carbonates principally used in medicine are those of ammonia, lime, iron, magnesia, lead, soda, and strontian.

**CARBONATED**, kár-bo-nay-ted, *a.* Combined with carbon.

**CARBONIC**, kár-bon'ik, *a.* Relating to carbon.

**CARBONIC ACID**, kár-bon'ik as'id, *s.* A compound of carbon and oxygen; it has been called aerial acid, fixed air, cretaceous acid, and mephitic gas. Carbonic acid is very plentifully disengaged from volcanoes in almost all countries, but especially near or extinct volcanoes. This elastic fluid has the property of decomposing many of the hardest rocks with which it comes in contact, particularly the numerous class in whose composition felspar is an ingredient. In volcanic countries, these volcanic emanations are not confined to springs, but rise up in the state of pure gas from the soil in various places. The Grotta del Cane, near Naples, affords an excellent example. The acid is specifically heavier than atmospheric air, and on this account it accumulates in any cavity on the surface of the ground. It may be let out of any excavations in which it has accumulated, poured into a bottle, like water, corked, and carried to any distance. It is fatal to human beings when breathed undiluted: by miners it is called choke-damp.

**CARBONIFEROUS**, kár-bo-nif'ur-us, *a.* (*carbo*, and *ferus*, Lat.) Containing carbon; yielding carbon.

**CARBONIZATION**, kár-bo-ne-za'shun, *s.* The conversion of animal or vegetable substances into carbon.

**CARBONIZE**, kár-bo-nize, *v. n.* To convert into carbon by the action of heat.

**CARBONHYDROUS**, kár-bon-o-hi'drus, *a.* Composed of carbon and hydrogen.

**CARBON SULPHURETS**, kár-bo-sul'fu-rets, *s.* A genus of compounds formed by the union of carbon, sulphur, potassium, sodium, barium, ammonium, &c.

**CARBON JAR**, kár-boy, *s.* A large glass jar or bottle used in basket work, generally used for holding acids and other acids.

**CARBUNCLE**, kár-bung-kul, *s.* A gem highly prized by the ancients, probably the almandine, a variety of the garnet; it is of a deep red colour, with a mixture of scarlet. In Surgery, an anthrax called by the Greeks; a hard and circumscribed inflammatory tumour, the most common

## CARBUNCLED—CARD.

situation of which is on the neck, back, or loins. It is nearly allied to a boil, but is more aggravated in all its symptoms. The term is also applied to small protuberances or elevations on any parts of animals, vegetables, or minerals. In Heraldry, a bearing consisting of eight radii, four of which make a common cross, and the others a saltier.

**CARBUNCLED**, kár-bung'kuld, *a.* Set with carbuncles; spotted.

**CARBUNCULAR**, kár-bung'ku lar, *a.* Relating to a carbuncle; red like a carbuncle.

**CARBUNCULATION**, kár-bung-ku-la'shun, *s.* (*carbunculatio*, Lat.) The blasting of the young buds of trees or plants, either by excessive heat or cold.

**CARBURET**, kár'bu-ret, *s.* A compound formed by the combination of carbon with any metal, alkali, or earth.

**CARBURETTED**, kár'bu-ret-ted, *a.* Combined with carbon.

**CARBURETTED HYDROGEN**, kár'bu-ret-ted hi'dro-jen, *s.* An inflammable gas, formed abundantly in stagnant pools from the decomposition of dead vegetable matter, and often found issuing in large quantities from fissures in coal beds, where it often explodes when ignited by the contact of the miner's lamp, and produces much destruction of life. It is termed fire-damp.

**CARCAJOU**, kár'ka-joo, *s.* The name given by Buffon to the Meles Labradorica, or American badger. The size is rather less, and the form not so thick, as that of the European badger: the fur is soft and fine.

**CARCANET**, kár-ka-net, *s.* (*carcan*, Fr.) A chain or collar of jewels.

Say that I lingered with you at your shop,  
To see the making of her carcanet.—*Shaks.*

**CARCASS**, kár'kas, *s.* (*carcasse*, Fr. *carcasso*, Ital.) The dead body of any animal; the body, in a ludicrous sense, as in the following passage:

To-day how many would have given their honours  
To've saved their carcasses!—*Shaks.*

The decayed remains of anything, as of a ship; the naked building of a house before it is lathed and plastered, or the floors laid; *carcass flooring*, that which supports the boarding or floor boards above, and the ceiling below; *carcass roofing*, the grated frame of timber work which spans the building, and carries the boarding and other covering; a round vessel filled with combustible matter, pieces of gun or pistol barrels, loaded grenades, &c., to be thrown from a mortar on the buildings of an enemy.

**CARCELAGE**, kár'se-lidj, *s.* (*carcer*, a prison, Lat.) Fees exacted on incarceration in certain prisons.

**CARCERAL**, kár'sur-al, *a.* Belonging to a prison.

**CARCINOMA**, kár-se-no'ma, *s.* (*carcinome*, Fr. *carcinoma*, Lat.) Cancer; or, by some authors, incipient cancer; and, by others, the encephaloid form of the disease.

**CARCINOMATOUS**, kár-se-no'ma-tus, *a.* Cancerous; having a tendency to cancer.

**CARD**, kárd, *s.* (*charta*, Lat. *carte*, Fr.) An oblong piece of paper figured, and used in games of hazard; the paper on which the points are marked in the mariner's compass; a piece of pasteboard containing a person's address, or an advertisement; a note transmitted by way of invitation, in reply, or in business; (*caard*, Dut.) an instrument with which flax, wool, or cotton is combed, and fitted

## CARDAMINE—CARDING.

for spinning;—*v. a.* to comb with cards, so as to fit for spinning; to mingle together; to disentangle, as the carder separates the coarse from the fine;—*v. n.* to play at cards.

**CARDAMINE**, kár-dam'e-ne, *s.* (dim. of *kardamon*, water-cress, Gr. from its taste.) A genus of Cruciferous plants. *C. pratensis*, or Ladies'-smoke, is a common flower in moist places in this country.

**CARDAMOMS**, kár-da-mums, *s.* (*kardamom*, Gr. *cardamome*, Fr.) The aromatic seeds of different species of the genus *Amonum*.

**CARDER**, kárd'ur, *s.* A person employed in the process of carding wool, &c.; one who plays much at cards.

**CARDIA**, kár'de-a, *s.* (*kardia*, the heart, Gr.) In Anatomy, the superior or œsophageal orifice of the stomach, so named from its proximity to the heart—*orificium ventriculi superioris*.

**CARDIAC**, kár'de-ak, *a.* (*kardiakos*, Gr.) Belonging to the heart. In Anatomy, applied to the blood-vessels and nerves which are distributed on the heart; also, to the nerves which, originating from the cervical ganglia, unite to form, between the arch of the aorta and the bifurcation of the bronchia, the cardiac plexus; in Pathology, to a painful affection of the heart; in *Materia Medica*, to remedies which exercise a cordial and invigorating influence upon the system.

**CARDIACAL**, kár-di'a-kal, *a.* (*kardiakos*, Gr.) Pertaining to the heart; cordial; having the quality of invigorating, by exciting the action of the heart through the medium of the stomach.

**NOTE**.—*Carpet* is used proverbially, for a state of ease and luxury; as, a *carpet-knight*, a knight that has never known the field, and has recommended himself only at table. Dr. Johnson says. This reflects no great credit on the knights in question. The fact is, that a *carpet-knight* was so called, because he received his honour from the king's hand in the court, and upon a carpet, or such like ornament belonging to the regal state. They were sometimes called *knights of the green cloth*, in contradistinction to those who were knighted as soldiers; and they were selected from those who had been serviceable to the court, city, or state, and had therefore merited distinction.—*Todd*.

He is knight, dubbed with unbacked rapier, and on carpet consideration.—*Shaks*.

To be on the carpet, to be the subject of consideration, equivalent to the French phrase to be on the *tapis*;—*v. a.* to cover with a carpet.

**CASTLE**, kas'sl, *s.* (*castellum*, Lat. *castel*, Sax.) A building fortified for military defence; also, a house with towers, usually encompassed with walls and moats, and having a donjon or keep in the centre. The characteristics of a castle are its embankments and ditches; from the former whereof the walls rise usually crowned with battlements, and flanked by circular or polygonal bastions at the angles formed by the walls. These were pierced for gates, with fixed or draw

bridges, and towers on each side. The considerable strength were further guarded by descending gratings, called portcullises. The apertures were made as small as they could be, consistent with internal lighting. *Castellatio* was the castle work or service performed by the feudal tenants, for the building and upholding of castles of defence, towards which some personal assistance, and others paid tribute. *Castleward* was an imposition on such persons as dwelt within a certain distance of any castle towards the maintenance of the castle. In a ship, there are several castles called by this name—the *forecastle*, being the castle at the prow, or the uppermost deck; the *mizen*; the *hindcastle* is the elevated castle on the stern, over the last deck, where the officers' cabins are; *castles* in the air are airy projects; *castle-builder*, a fanciful projector; *castle-building*, indulging in illusory projects; *crowned*, crowned or topped with a castle.

he thinks objectionable; one who is given to censure.

CENSORIAL, sen-so're-al, } *a.* Pertaining to the  
CENSORIAN, sen-so're-an, } office of a censor, or  
the supervision of public morals.

CENSORIOUS, sen-so're-us, *a.* Addicted to censure; severe; full of invectives; ready to find fault and condemn.

CENSORIOUSLY, sen-so're-us-le, *ad.* In a severe or censorious manner.

CENSORIOUSNESS, sen-so're-us-nes, *s.* Disposition to condemn; habit of finding fault and reproaching.

CENSORLIKE, sen'sur-like, *a.* Censorious; austere.

CENSORSHIP, sen'sur-ship, *s.* The office of a censor; the period during which a censor holds office.

CENSUAL, sen'su-al, *a.* (*censualis*, Lat.) Pertaining to the census or Roman register.

CENSURABLE, sen'su-ra-bl, *a.* Worthy of censure; blameable; culpable.

CENSURABLENESS, sen'su-ra-bl-nes, *s.* Blameableness; fitness to be censured.

CENSURABLY, sen'su-ra-ble, *ad.* In a reprehensive manner; worthy of blame.

CENSURE, sen'sure, *s.* (French, *censure*, Lat.) Blame; reprimand; reproach; judgment; opinion; determination; judicial sentence;—*v. a.* (*censurer*, Fr.) to blame; to brand publicly; to condemn by a judicial sentence; to judge; to estimate. —Obsolete in the last two senses.

The onset and retire  
Of both your armies, whose equality  
By our best eyes cannot be censured.—*Shaks.*

—*v. n.* to judge.—Obsolete.

CENSURER, sen'su-rur, *s.* One who blames or reprimands others.

CENSURING, sen'su-ring, *s.* Reproach; blame.

CENSUS, sen'sus, *s.* (Latin.) An enumeration of the inhabitants of a country, taken by order of the Legislature. An authentic declaration among the Romans, made before, and registered by the censors, containing an enumeration, in writing, given in by the several subjects of the Roman empire, of their respective names, places of abode, estates, quality, wives, children, domestics, tenants, slaves, &c. It was instituted and performed by Servius Tullius, and was held every five years by the censors, after that office was appointed.

CENT, sent, *s.* (*centum*, Lat.) A hundred. In Commerce, an abridgment of centum, used to express the profit or loss arising from the sale of any commodity, as 10 per cent. profit or loss, that is,  $\frac{1}{10}$  profit or loss upon the whole sale. In the United States of America, a copper coin, value the hundredth part of a dollar.

CENTAGE, sent'idj, *s.* Rate by the cent. or hundred.

CENTAUR, sen'tawr, *s.* In Mythology, a fabulous monster, represented as half man, half horse; also, Sagittarius, the archer, a sign in the Zodiac.

CENTAUREA, sen-taw're-a, *s.* (so named from the Centaur Chiron having cured the wound with it, made in his foot by the arrow of Hercules.) Centaury, a genus of Composite plants: Suborder, Cynarea.

CENTAURELLA, sen-taw-rel'la, *s.* (dim. of *centaurea*, from the affinity of the genera.) A genus of American annual plants: Order, Gentianaceae.

CENTAURY.—See Centaurea.

CENTENARIAN, sen-te-na're-an, *s.* One who has attained a hundred years.

## CENTENARY—CENTRADEIA

CENTENARY, sen'te-na-re, *s.* (*centena*) The number of a hundred.

CENTENES, sen-te'nes, *s.* (*kenteo*, I stin Tendrics, a genus of hedgehogs, distinguishing the true hedgehogs by their not being able to roll themselves up into a ball, and having their feet webbed.) They are natives of Madagascar.

CENTENNIAL, sen-ten'ne-al, *a.* Commemorative of a hundred years; happening every hundred years.

CENTESIMAL, sen-tes'e-mal, *a.* (*centesimus*) Hundredth;—*s.* the next step of progression in the arithmetic of fractions.

CENTESIMATION, sen-tes-e-ma'shun, *s.* Punishment for mutiny or desertion, whereby every hundred is selected for execution.

CENTESIM, sen'tizim, *s.* The hundredth part of a thing.

CENTICIPITOUS, sen-te-sip'e-tus, *a.* Having a hundred heads, (Lat.) Having a hundred heads.

CENTIFIDOUS, sen-tif'e-dus, *a.* Divided into a hundred parts.

CENTIFOLIUS, sen-te-fo'le-us, *a.* (*centifolium*, a leaf, Lat.) Having a hundred leaves.

CENTIGRADE, sen'te-grade, *s.* (*centum*, a step, Lat.) The Thermometer of Fahrenheit, particularly in France. It begins at the point of water, between which and the point the scale consists of 100 equal degrees.

degrees on Fahrenheit's scale being  $\frac{9}{5}$  of a degree, to find the corresponding degrees of the former with those of the latter, multiply the degrees above or below the point of water, by 5, and divide by 9, thus:  $86^{\circ} - 32^{\circ} = 54 \times 5 = 270 \div 9 = 30$  centigrade.

To reduce the degrees of the latter scale to those of Fahrenheit, multiply by 5, thus:—Centigrade,  $30^{\circ} \times 5 = 54 + 32 = 86^{\circ}$  Fahrenheit;—*a.* 100 equal parts.

CENTIGRAMME, sen'te-gram, *s.* (*centum*, Lat. and *gramme*, Fr.) A French weight, the hundredth part of a gramme, nearly equal to the weight of a grain.

CENTILITRE, sen-til'e-tur, *s.* (*centum*, Lat. and *litre*, Fr.) The hundredth part of a litre, a liquid measure.

CENTILOQUY, sen-til'o-kwe, *s.* A hundred discourses.

CENTIMETRE, sen-tim'e-tur, *s.* (*centum*, Lat. and *metre*, Fr.) The hundredth part of a metre, nearly equivalent to  $\frac{1}{4}$  of an inch.

CENTIPED, sen'te-pece, *s.* (*centum*, a hundred, a foot, Lat.) The name common to insects of the order Myriopoda, so named from their bodies consisting of numerous segments, each of which a pair of legs is attached to.

number of feet seems to increase with the number of segments, and in some species to the twenty-six pairs.

CENTNER, sent'nur, *s.* In Metallurgy, a hundred divided decimally.

CENTO, sen'to, *s.* In Poetry, a work composed of verses or passages, promiscuously taken from other authors, and disposed in a regular order.

CENTOTHECA, sen-to-the'ka, *s.* (*centon*, and *theke*, a theca, Gr.) A genus of plants, order, Gramineae.

CENTRADENIA, sen-tra-de'ne-a, *s.* (*centon*, and *aden*, a gland, Gr. in reference to

## CENTRAL—CENTRE.

formed spurs of the smaller stamens.) A genus of plants: Order, Melastomaceæ.

**CENTRAL**, sen'tral, *a.* (*centralis*, Lat.) Relating to the centre, or placed in the centre or middle; containing the centre.

**CENTRAL Artery**, the artery which, given off by the ophthalmic, insinuates itself into the optic nerve in its passage to the retina.

**CENTRAL Eclipse** is when the centres of the heavenly bodies, which are affected, exactly coincide, or are directly in a line with the spectator.

**CENTRAL Forces**, the powers which cause a moving body to tend towards, or recede from, the centre of motion.

**CENTRAL Placenta**, in Botany, the column in the centre of fruits to which the seeds are attached. The terms *Central angle*, *Central axis*, and *Central column*, to which the seeds are likewise sometimes attached, are used in a similar sense: they are applied also to the partitions.

**CENTRALITY**, sen-tral'e-te, *s.* The state of being central.

**CENTRALIZATION**, sen-tral-e-za'shun, *s.* (*kentron*, a point, Gr.) Tending to the centre; the act of centralizing.

**CENTRALIZE**, sen-tral-ize', *v. a.* To gather to a central point; to bring to a centre.

**CENTRALLY**, sen'tral-le, *ad.* In a central manner.

**CENTRANTHERA**, sen-tran-the'ra, *s.* (*kentron*, a spur, and *anthera*, an anther, Gr. the cells of the anthers being spurred or macronate.) A genus of plants: the *Pleurorrhallis* of R. Brown: Order, Orchidaceæ.

**CENTRANTHUS**, sen-tran'thus, *s.* (*kentron*, a spur, and *anthon*, a flower, Gr. from the corolla having a spur at its base.) Spurred Valerian, a genus of plants, forming elegant border flowers: Order, Valerianaceæ.

**CENTRARCHUS**, sen-trar'kus, *s.* (*kentron*, and *archos*, the origin, Gr.) A genus of fishes of the Perch family, having the dorsal fin undivided; both the anal and dorsal have a number of short but graduated spines; ventral fin beneath the pectoral, and the caudal truncate.

**CENTRE**, sen'tur, *s.* (*centrum*, Lat.) A point equally distant from the extremities of a line, figure, or body; the middle point or place. In Military affairs, the body of troops occupying the place in the line between the wings;—*v. a.* to place on a centre; to fix as on a centre; to collect to a point;—*v. n.* to rest on; to repose on, as bodies when they gain an equilibrium; to be placed in the centre; to be collected to a point.

**CENTRE of Attraction** is that point in a body into which, if all its substance be collected, its action upon any remote object would be just the same as if that body retained its form.

**CENTRE of a Bastion**, a point in the middle of the gorge of a bastion, whence the capital line commences, and is generally at the angle of the inner polygon.

**CENTRE of a Conic Section**, a point in which the diameters intersect each other.

**CENTRE of a Curve of the higher kind**, the point where two diameters concur. When all the diameters concur in the same point, Sir Isaac Newton calls it the *general centre*.

**CENTRE of a Dial**, that point where the axis of the world intersects the plane of the dial; and also that point wherein all the hour-lines meet.

## CENTRE—CENTRONOTUS.

**CENTRE of Equal Attraction** is that point between two bodies in which it is equally attracted to both, as an iron ball may be equally attracted to two opposite magnets, and consequently will coalesce with neither.

**CENTRE of Friction**, that point on which anything turns when put in rapid and independent motion, as a top spins round upon the end of the peg; this point therefore is the centre of friction.

**CENTRE of Gravity**, in Mechanics, that point about which all the parts of a body, in any situation, balance each other.

**CENTRE of Motion** is that point which remains mathematically at rest when the other parts of the body are in motion. For example, the centre of a revolving wheel, a lathe mandril, &c., is mathematically at rest, though the other parts are revolving rapidly.

**CENTRE of Oscillation**, that point in a pendulum in which, if the weight of the several parts was collected, each vibration would be performed in the same time as when those weights are separate. The *centre of suspension* is the point on which the pendulum hangs.

**CENTRE of Percussion**, in a moving body, that point wherein the percutient force is greatest. For example, in a hammer, the *centre of percussion* is in the head, that part being made heavy on purpose.

**CENTRIC**, sen'trik, *a.* Placed in the centre or middle.

**CENTRICALLY**, sen'tre-kal-le, *ad.* In a central position.

**CENTRICALNESS**, sen'tre-kal-nes, *s.* A situation in the centre.

**CENTRIFUGAL**, sen-trif'u-gal, *a.* (*centrum*, a centre, and *fugio*, I fly, Lat.) Tending to recede from the centre. *Centrifugal force* is that by which the parts of a body moving round a centre endeavour to recede from it.

**CENTRINA**, sen-tri'na, *s.* (*kentron*, a spur or thorn, Gr.) A genus of fishes with thick heavy bodies; dorsal spines strong, and placed in the fleshy part of the fins; the hinder dorsal opposite to the ventral fin: Family, Squalidæ.

**CENTRIPETAL**, sen-trip'e-tal, *a.* (*centrum*, and *peto*, I seek, Lat.) Tending to the centre. *Centripetal force* is that which draws or attracts to the centre, as that of the power of gravitation.

**CENTRISCUS**, sen-tris'kus, *s.* (*kentron*, a thorn, Gr.) A genus of Acanthopterygious fishes: Family, Fistularidæ.

**CENTROLEPIS**, sen-tro-lep'is, *s.* (*kentron*, and *lepis*, a scale, Gr.) A genus of plants belonging to the order Desvauziaceæ or Bristle-worts.

**CENTROLOBIUM**, sen-tro-lob'e-um, *s.* (*kentron*, a spur, and *lobos*, a lobe, Gr.) A genus of Leguminous plants: Tribe, Dalbergææ.

**CENTROLOPHUS**, sen-trol'o-fus, *s.* (*kentron*, and *lophos*, a crest, Gr.) A genus of fishes with elongated bodies; dorsal fin commencing even with the pectoral; ventral fin small; anal fin half as long as the dorsal; vent central; lateral line prominent: Family, Coryphenidæ.

**CENTRONIA**, sen-tro'ne-a, *s.* (*kentron*, a spur, Gr. from the anthers being each furnished with a long spur.) A genus of plants with large purple flowers: Order, Melastomaceæ.

**CENTRONOTUS**, sen-tro-no'tus, *s.* (*kentron*, and *notos*, the back, Gr. from a spur-like prickle pointing forward on the back.) A genus of fishes with oblong-fusiform bodies; dorsal and anal fins of equal

- length, and falcated; caudal fin large and forked; scales minute: Family, Zeidae.
- CENTROPETALUM**, sen-tro-pet'a-lum, *s.* (*centron*, a spur, and *petalon*, a petal, Gr.) A genus of plants: Order, Orchidaceae.
- CENTROPHORUS**, sen-tro'fo-rus, *s.* (*centron*, and *phoreo*, I bear, Gr. from the spines in front of the dorsal fins.) A genus of fishes resembling Spinax, but having the body covered with hard carinated scales or prickles: Family, Squalidae.
- CENTROPOGON**, sen-tro-po'gon, *s.* (*centron*, a spur, and *pogon*, a beard, Gr.) A genus of plants: Order, Lobeliaceae.
- CENTROPOMA**, sen-tro-po'ma, *s.* (*centron*, and *poma*, an operculum, Gr.) A genus of fishes belonging to the Percidae or Perch family.
- CENTROPRISTIS**, sen-tro-pris'tis, *s.* (*centron*, and *pristes*, a saw, Gr. from its saw-like spines.) A genus of fishes of the Percidae or Perch family.
- CENTROPUS**, sen'tro-pus, *s.* (*centron*, a spur, and *pous*, a foot, Gr.) A genus of birds belonging to the Coccozinae or Hook-billed Cuckoos.
- CENTROSPERMUM**, sen-tro-sper'mum, *s.* (*centron*, and *sperma*, a seed, Gr. from the spiny points of the puppus.) A genus of Composite plants: Suborder, Senecionidae.
- CENTROSTEMMA**, sen-tro-stem'ma, *s.* (*centron*, and *stemma*, a chaplet, Gr.) A genus of plants: Order, Asclepiadaceae.
- CENTROTUS**, sen'tro-tus, *s.* (*centron*, Gr.) A genus of insects, so named from the thorax being furnished with a horn on each side, and prolonged posteriorly into a point as long as the abdomen: Order, Hemiptera.
- CENTUMVIRAL**, sen-tum've-ral, *a.* Pertaining to the Centumviri.
- CENTUMVIRI**, sen-tum've-ri, *s.* (Latin.) Judges appointed by the prætor to decide common causes amongst the Roman people. They were made up of the most learned in the laws, and elected out of the thirty-five tribes of the people, three out of each tribe, which made the number one hundred and five, though, for the sake of the round number, called Centumviri. They were, in process of time, increased to one hundred and eighty, yet still kept their first name. Their decisions were called *judicia centumviralia*.
- CENTUNCULUS**, sen-tun'ku-lus, *s.* (Latin.) Bastard Pimpernel, a British annual weed with alternate ovate leaves and sessile flowers: Order, Primulaceae.
- CENTUPLE**, sen'tu-pl, *a.* (French, *centuplex*, Lat.) A hundred fold;—*v. a.* to multiply a hundred fold.
- CENTUPPLICATE**, sen-tu'ple-kate, *v. a.* To make a hundred fold.
- CENTURIAL**, sen-tu're-al, *a.* Relating to a century.
- CENTURIATE**, sen-tu're-ate, *v. a.* (*centurio*, Lat.) To divide into hundreds.
- CENTURIATOR**, sen-tu-re-a'tur, *s.* A name applied to historians who distinguish time by centuries.
- CENTURIST**, sen'tu-ris't, *s.* Applied to historians who distinguish time by centuries.
- CENTURION**, sen-tu're-un, *s.* (*centurio*, Lat.) A Roman officer who had the command of a *centuria*, or division of one hundred men, of which sixty formed a legion, and six a cohort. They were chosen from among the common soldiers, according to their merit: the most honourable of these was called Primipilus; he presided over all the other centurions. His office was to place the guard, go

## CENTURY—CEPHALOCARPUS.

- the rounds, distribute rewards, and punishments. He carried a distinctive helmet: upon the Trojan columns have crests upon the helmet ornamented; while the soldiers have a button.
- CENTURY**, sen'tu-re, *s.* (*centuria*, Lat.) years; usually employed to specify times used simply for a hundred.
- Romulus, as you may read, did divide into tribes, and the tribes into centuries or *Spenser*.
- CEPHAÆLIS**, sef-a-e'lis, *s.* (*kephale*, a head, the flowers being united in heads.) plants, one of the species of which, *C. inaequalis*, a little creeping-rooted Brazilian plant, yields the well-known emetic of that order, Cinchonaceae.
- CEPHALACANTHUS**, sef-a-la-kan'thus, *s.* (*kephale*, a head, and *akantha*, a spine, Gr.) mailed-cheeked fishes belonging to the Gurnard family.
- CEPHALALGIC**, sef-a-lal'jik, *a.* (*kephale*, a head, and *algos*, a pain, Gr.) Affected with, pertaining to, or productive of headache.
- CEPHALANTHERA**, sef-a-lan-the'ra, *s.* (*kephale*, a head, and *anthera*, an anther, Gr.) A genus of species of which are British, *C. grandifolia*, and *rubra*: Order, Orchidaceae.
- CEPHALANTHUS**, sef-a-lan'thus, *s.* (*kephale*, a head, and *anthos*, a flower, Gr. the flowers being globular heads.) Button-wood, a genus consisting of shrubs and trees: Order, Rubiaceae.
- CEPHALARIA**, sef-a-la're-a, *s.* (*kephale*, a head, and *aria*, a tribe, Gr.) from the flowers being disposed in rows. A genus of plants allied to Scabiosa, including several of the species commonly called *Scabiosa*: Order, Dipsacaceae.
- CEPHALASPIS**, sef-a-las'pis, *s.* A genus of fossil fishes found in the old red sandstone; in shape it resembles the ichthyoid which leather merchants and shoemakers use for their leather—hence the name.
- CEPHALATOMY**, sef-a-lat'o-me, *s.* (*kephale*, a head, and *temno*, I cut, Gr.) In Anatomy, section of the head. In Midwifery, of the brain of a child impacted in the pelvis.
- CEPHELEMYIA**, sef-a-le-me'i-a, *s.* (*kephale*, a head, and *myia*, a fly, Gr.) A genus of insects: Family, Cecidomyiidae.
- CEPHALEPIS**, sef-a-le-pis, *s.* (*kephale*, a head, and *epis*, a scale, Gr.) A genus of fishes, in which the body is extremely long thin bodies; two dorsal fins, the first of which is exceedingly long. The whole length of the body; one of the first of which is exceedingly long. Gymnetres.
- CEPHALIA**, se-fa'le-a, *s.* (*kephale*, Gr.) Dipterous insects, in which the fore head is much prolonged, being without the palpi strongly dilated in the form of a helmet. Tribe, Muscides.
- CEPHALIC**, sef-a-lik, *a.* (*kephalikos*, Gr.) To the head; medicinal for the head.
- CEPHALINÆ**, sef-a-lin'e, *s.* (*cephalus*, a head, and *ina*, a tribe, Gr.) The Sun-fishes, a subfamily with oval or orbicular bodies, having caudal, and ventral fins united: Order, Osteichthyes.
- CEPHALOCARPUS**, sef-a-lo-kar'pus, *s.*

## HALOCERA—CEPHALOTAXUS.

fruit, Gr.) A genus of plants: Order, *Malvæ*.

**TERA**, sef-a-os'e-ra, *s.* (*kephale*, and *keras*, Gr.) A genus of Dipterous insects, in which the proboscis is long, and projecting like a beak, Nemocera.

**CROTON**, sef-a-lo-kro'ton, *s.* (*kephale*, Gr. plant *croton*.) A genus of plants: Order, Euphorbiaceæ.

**CEPHALOPODA**, sef-a-lof'o-ta, *s.* (*kephale*, and *poda*, Gr.) The name given by Blainville to the Cephalopoda of Cuvier.

**CEPHALOPHY**, sef-a-log'ra-fe, *s.* (*cephala*, Gr. from *kephale*, and *grapho*, I describe, a anatomical description of the head.

**CEPHALOID**, sef-a-loyd, *a.* (*kephale*, and *eidos*, like-ness, Gr.) In Botany, capitate; spherical; head-

**CEPHALOPUS**, sef-a-lo-pap'pus, *s.* (*kephale*, and *pous*, a foot, Gr.) A genus of Composite Suborder, Labiatifloræ.

**CEPHALUS**, sef-a-lo-fus, *s.* (*kephale*, a head, and *os*, a crest, Gr.) The tufted Antelopes, of Ruminants, varying considerably in size, but all distinguished by a prominent tuft on the forehead: Family, Antilopidæ.

**CEPHALOPODA**, sef-a-lof'o-da, } *s.* (*kephale*, and *poda*, a foot, Gr.) *pous*, a foot, their organs of prehension and motion are directed round the head.) An order of Mollusca, in which the viscera are contained in a sac, from the opening of which the head is furnished with two large eyes, and with longer or shorter conical and fleshy feet, capable of being bent in every direction. They are extremely vigorous, the surface of which is covered with cups or suckers, enabling the animal to adhere with great tenacity to any body to which it is attached. They swim with the head back. The most of them are furnished with an external shell. The Nautilus and Spirula form the genera of hundreds of species which have been extinct. Their remains are found in great abundance in secondary strata; they occur also in tertiary formations.—See Ammonite and Nautilus.

**CEPHALOPUS**, sef-a-lo-fus, *s.* (*kephale*, a head, and *pous*, a foot, Gr.) A genus of Composite Suborder, Labiatifloræ.

**CEPHALOPUS**, sef-a-lo-fus, *s.* (*kephale*, a head, and *pous*, a foot, Gr.) A genus of Composite Suborder, Labiatifloræ.

**CEPHALOPUS**, sef-a-lo-fus, *s.* (*kephale*, a head, and *pous*, a foot, Gr.) A genus of Composite Suborder, Labiatifloræ.

**CEPHALOPUS**, sef-a-lo-fus, *s.* (*kephale*, a head, and *pous*, a foot, Gr.) A genus of Composite Suborder, Labiatifloræ.

**CEPHALOPUS**, sef-a-lo-fus, *s.* (*kephale*, a head, and *pous*, a foot, Gr.) A genus of Composite Suborder, Labiatifloræ.

**CEPHALOPUS**, sef-a-lo-fus, *s.* (*kephale*, a head, and *pous*, a foot, Gr.) A genus of Composite Suborder, Labiatifloræ.

**CEPHALOPUS**, sef-a-lo-fus, *s.* (*kephale*, a head, and *pous*, a foot, Gr.) A genus of Composite Suborder, Labiatifloræ.

**CEPHALOPUS**, sef-a-lo-fus, *s.* (*kephale*, a head, and *pous*, a foot, Gr.) A genus of Composite Suborder, Labiatifloræ.

## CEPHALOTES—CERAMIACEÆ.

*taxus*, a kindred genus of plants.) A genus of plants: Order, Taxaceæ.

**CEPHALOTES**, sef-a-lo'tes, *s.* (*kephale*, and *ota*, ears, Gr.) A genus of Coleopterous insects: Tribe, Carabidæ.

**CEPHALOTHECIUM**, sef-a-lo-the'she-nim, *s.* (*kephale*, and *theke*, a theca, Gr.) A genus of Fungi: Order, Hyphomycetes.

**CEPHALOTRICHIA**, sef-a-lo-trik'e-a, *s.* (*kephale*, and *thrix*, hair, Gr.) A genus of Coleopterous insects, densely covered with long down, except on the elytra: Family, Melolonthinæ.

**CEPHALOTRICHUM**, sef-a-lo-trik'um, *s.* (*kephale*, and *thrix*, hair, Gr.) A genus of Fungi: Order, Hyphomycetes.

**CEPHALOTUS**, sef-a-lo'tus, *s.* (*kephalos*, headed, Gr. the filaments of the stamens being capitate.) The New Holland Pitcher-plant, a genus of plants constituting the order Cephalotaceæ of Lindley.

**CEPHALOXIS**, sef-a-lok'sis, *s.* (*kephale*, and *loxos*, dubious or oblique, Gr.) A genus of rush plants: Order, Juncaceæ.

**CEPHALUS**, sef-a-lus, *s.* (*kephale*, from the head forming the larger portion of the fish, Gr.) The Sun-fish, a genus of fishes, type of the subfamily Cephalinæ. The pectoral fin in this genus is lengthened and pointed; body oblong, hard, and divided into small angular compartments: Family, Balistidæ.

**CEPHENEMYIA**, sef-e-ne-me-i'a, *s.* (*kephen*, a drone, and *myia*, a fly, Gr.) A genus of Dipterous insects: Tribe, Cestrinæ.

**CEPHEUS**, sef'e-us, *s.* A constellation, surrounded by Cassiopeia, Ursa Minor, Draco, and Cygnus, named after Cepheus, the King of Ethiopia, who was the husband of Cassiopeia, and the father of Andromeda, and placed in the heavens, according to Hyginus, that no one of this remarkable family might be absent. He is represented in old plates as a man with a tiara on his head, kneeling on one knee, and with his arms extended.

**CEPHUS**, sef'us, *s.* (*kephale*, Gr.) A genus of the Cod-fishes, *Cadida*, in which the head is remarkably large, depressed, and broad; the name also of a genus of Dipterous insects of the duck family.

**CEPOLA**, sep-o'la, *s.* A genus of anguilliform fishes belonging to the tribe Gymnetres, or Ribband-fish: Subfamily, Ophidionidæ.

**CERACEOUS**, ser-a'shus, *a.* (*keras*, Gr. *cera*, Lat. wax.) Wax-like; partaking of the nature of wax.

**CERAMINE**, se'ray-in, *s.* A substance obtained from wax, insoluble in alcohol.

**CERAMBYCIDÆ**, ser-am-bis'se-de, } *a.* (*cerambyx*, one of the genera.) A family of Coleopterous insects, which have the head large and vertical, the jaws sharp and strong, the tarsi prehensile, and the thorax nearly as broad as the body. They live upon solid or decayed wood, both in their larva and perfect states.

**CERAMBYX**, se-ram'biks, *s.* (*keras*, a horn, and *ambyx*, a cup, Gr. from the form of the joints of the antennæ.) A genus of Coleopterous insects: Family, Cerambycidæ.

**CERAMIA**, ser-a'me-a, *s.* (*keramion*, a pitcher, Gr. from the shape of the flowers.) A genus of heath plants, natives of the Cape of Good Hope: Order, Ericaceæ.

**CERAMIACEÆ**, se-ra-mi-a'se-e, *s.* (*ceramium*, one of the genera.) Rose-tangles, a natural order of

cellular or tubercular, unsymmetrical sea-weeds, generally of a rose-red or purplish colour, seldom olive or violet. Their propagation is by means of spores formed in fours or threes, within a transparent perispore or mother cell, and collected in bodies of many different forms and structure.

**CERAMIUM**, se-ra'me-um, *s.* (*keramos*, a little measure, Gr. in reference to the appearance of the capsules.) A genus of marine Algae: Tribe, Confervoidae.

**CERAMIUS**, ser-a'me-us, *s.* (*keramion*, a pitcher, Gr.) A genus of Hymenopterous insects allied to the wasp: Family, Diptoptera.

**CERANTHERA**, ser-an-the'ra, *s.* (*keras*, a horn, and *anthera*, an anther, Gr. from the lobes of the anthers being terminated by a bristle.) A genus of plants, with small greenish-yellow flowers in panicled racemes: Order, Violaceae.

**CERAPTERUS**, ser-ap'tur-us, *s.* (*keras*, a horn, and *ptera*, a wing, Gr.) A genus of Coleopterous insects: Family, Xylophagi.

**CERASPIS**, ser-as'pis, *s.* (*keras*, a horn, and *aspis*, a shield, Gr.) A genus of Coleopterous insects: Family, Scarabaeidae.

**CERASTES**, ser-as'tes, *s.* (*keras*, a horn, Gr.) A name given by Swainson to a genus of Indian and African vipers, remarkable for their fatal venom, and for two little horns or pointed bones placed over each eye. The animal is of a livid grey colour, and has a most terrific appearance. It is called *C. horridus*.

**CERASTIUM**, ser-as'te-um, *s.* (*keras*, *keratos*, a horn, Gr. from the capsules having the form of an ox's horn.) Chickweed, a genus of herbaceous plants: Order, Caryophyllaceae.

**CERASUS**, ser-a'sus, *s.* (from *Cerasus*, a town in Pontus, in Asia.) The Cherry, a genus of trees of the order Amygdalaceae.

**CERATE**, se'rat, *s.* (*cerat*, Fr. *ceratum*, Lat.) A pharmaceutical preparation, or healing plaster, of which wax is a principal ingredient.

**CERATED**, se'ra-ted, *a.* (*ceratus*, Lat.) Covered with wax.

**CERATINA**, ser-a-ti'na, *s.* A genus of Hymenopterous insects belonging to the Anthophila or Bee family.

**CERATITES**, ser-a-ti'tes or ser'a-titse, *s.* A genus of Ammonites, in which the edge of the septa is angular and undulated.

**CERATIUM**, se-ra'she-um, *s.* (*keras*, a horn, Gr. from the horn-like appearance of the plants when examined by the microscope.) A genus of Fungi, found on dead wood: Tribe, Hyphomycetes.

**CERATOCELE**, ser-a-tos'e-le, *s.* (*keras*, a horn, and *kele*, a hernial tumour, Gr.) A protrusion of the membrane of the aqueous humour of the eye through a rupture of the cornea.

**CERATOCEPHALUS**, ser-a-to-sef'a-lus, *s.* (*keras*, and *kephale*, a head, Gr. from the horny ends of the seeds in the heads of the capsules.) A genus of plants consisting of small annual herbs with yellow flowers: Order, Ranunculaceae.

**CERATODES**, ser-a-to'des, *s.* A subgenus of Molusca, of the family Turbidae, in which the shell is discoidal, the body whorl higher than the spiral whorls, the outer lip thin, and the operculum horny.

**CERATONIA**, ser-a-to'ne-a, *s.* (*keration*, a horn or pod, Gr.) The Carob-tree, or St John's-bread, a genus of Leguminous plants, cultivated in the

South of Europe for the sake of the pods of which is eaten: Suborder, Cessalpiniae.  
**CERATOPETALUM**, ser-a-to-pet'a-lum, *s.* and *petalon*, a petal, Gr. from the petal being jagged so as to resemble a stag's horn.) A genus of plants consisting of New Holland gum-trees: Order, Cunoniaceae.

**CERATOPHORUS**, ser-a-tof'o-rus, *s.* (*keras*, a horn, and *phoreo*, I bear, Gr.) A genus of lizards, having the snout forming a shield, covered with scales: Family, Agamidae.

**CERATOPHYA**, ser-a-to-fi'a, *s.* (*keras*, a horn, and *phyon*, I grow, Gr.) A genus of Dipterous insects, Family, Athericera.

**CERATOPHYLLACEAE**, ser-a-to-fil-la'se-ae, *s.* (*keras*, a horn, and *phyllon*, a leaf, Gr.) A natural order of plants, consisting of floating herbs, with multifid cellular leaves; the segments filiculate along the edges. The flowers are small; calyx inferior, and many-parted; stamens from twelve to twenty; ovary superior, one-celled; stigma filiform and oblique; seeds many, one-celled and one-seeded, indehiscent, minutely marked by the hardened style; seeds albumen none.

**CERATOPHYLLUM**, ser-a-to-fil'lum, *s.* (*keras*, a horn, and *phyllon*, a leaf, Gr.) A genus of plants, consisting of floating herbs, with multifid cellular leaves; the segments filiculate along the edges. The flowers are small; calyx inferior, and many-parted; stamens from twelve to twenty; ovary superior, one-celled; stigma filiform and oblique; seeds many, one-celled and one-seeded, indehiscent, minutely marked by the hardened style; seeds albumen none.

**CERATOPHYLLUM**, ser-a-to-fil'lum, *s.* (*keras*, a horn, and *phyllon*, a leaf, Gr.) A genus of plants, consisting of floating herbs, with multifid cellular leaves; the segments filiculate along the edges. The flowers are small; calyx inferior, and many-parted; stamens from twelve to twenty; ovary superior, one-celled; stigma filiform and oblique; seeds many, one-celled and one-seeded, indehiscent, minutely marked by the hardened style; seeds albumen none.

**CERATOPHYTA**, ser-a-tof'e-ta, *s.* (*keras*, a horn, and *phyton*, a plant, Gr.) A tribe of Coral reef plants, having the same character as that of Ceratophyllaceae, being the only genus to it: common in ponds and ditches in England.

**CERATOPHYTA**, ser-a-tof'e-ta, *s.* (*keras*, a horn, and *phyton*, a plant, Gr.) A tribe of Coral reef plants, having the same character as that of Ceratophyllaceae, being the only genus to it: common in ponds and ditches in England.

**CERATOPOGON**, ser-a-to-po'gon, *s.* (*keras*, a horn, and *pogon*, a beard, Gr.) A genus of Dipterous insects, in which the proboscis resembles a point, and the antennae are furnished with hairs at the base: Family, Nemocera.

**CERATOPTERA**, ser-a-top'te-ra, *s.* (*keras*, a horn, and *ptera*, a wing, Gr.) A genus of Dipterous insects, in which the proboscis resembles a point, and the antennae are furnished with hairs at the base: Family, Nemocera.

**CERATOSTACHYS**, ser-a-tos'ta-kis, *s.* (*keras*, a horn, and *stachys*, a spike, Gr. in reference to the flowers being intermixed with spongy bracts.) A genus of plants, consisting of one species of about forty feet high, a native of Java.

**CERATOSTEMA**, ser-a-to-ste'ma, *s.* (*keras*, a horn, and *stemon*, a stamen, Gr. in reference to the stamens being bluntly spurred at the base.) A genus of Peruvian evergreen shrubs with large corollas: Order, Ericaceae.

**CERBERUS**, ser-be-rus, *s.* In Mythology, a three-headed mastiff, born of Typhon and Echidna, whose office was to guard the gates of hell. He was slain by Hercules, who dragged him to the earth, where, in the foam dropped from his mouth, which was poisonous plant Aconite, or Wolf's-bane, grew. In Zoology, a genus of milky poisonous trees: Order, Apocynaceae. In Zoology, a genus of reptiles allied to the Boa Constrictor.

**CERCIS**, ser'sis, *s.* (*kerkis*, a shuttlecock, Gr.) A genus of plants, consisting of one species, a native of the East Indies.

## CERCOCARPUS—CEREBRIC.

by Theophrastus to *Cercis siliquastrum*, a genus of Leguminous plants consisting of trees with flowers of a bright purple colour, the wood of which is very beautifully veined with black, and takes an excellent polish: Suborder, Cuscutales.

**CARPUS**, ser-ko-kâr'pus, *s.* (*kerkos*, a shuttle and *karpós*, fruit, Gr. from the shape of the fruit.) A genus of plants consisting of a small tree: Order, Sanguisorbaceæ.

**CERBUS**, ser-ko-se'bus, *s.* (*kerkos*, a tail, and *bios*, a genus of monkeys, Gr.) A genus of the Primates.

**CEROMIA**, ser-ko-kom'a, *s.* (*kerkos*, a tail, and *miá*, a head of hair, Gr. from the stipitate tufts at the top of the seeds.) A genus of a, consisting of a shrub, a native of the East Indies: Order, Apocynaceæ.

**CERODIA**, ser-ko-di-â-ne, *s.* (*Cercodia*, one of the genera.) A tribe of plants belonging to the Haloragaceæ, in which the limb of the calyx is entirely parted; stamens equal or double the length of the lobes of the calyx, as are also the seeds and cells of the fruit.

**CEROPIS**, ser-ko-pi'ne, *s.* (*Cercopis*, one of the genera.) The jumping Cicadas, a family of small grasshoppers, found abundantly in various situations. In summer the larvæ have the singular property of producing a frothy substance, the human saliva, in the axils of grasses, &c. known vulgarly by the name of Cuckoo-spit. Species are very numerous; more than seventy are peculiar to South America.

**CEROPIS**, ser-ko-pis, *s.* (*kerkos*, a tail, and *pous*, a Gr.) The Cuckoo-spit, a genus of Hemipteran insects: Type of the family Cicadaria.

**CITHECUS**, ser-ko-pith'e-kus, *s.* (*kerkopithecus*, tailed-monkey, Gr.) A genus of long-tailed monkeys which have a prominent muzzle of about one-third of the face, cheek pouches, tail and callosities on the seat.

**CIS**, ser-ko'sis, *s.* (*kerkos*, a tail, Gr.) In anatomy, an elongation of the clitoris.

**CIS**, ser-de-a, *s.* (in honour of Juan de Dios, patron saint of the Cerda.) A genus of Mexican herbs intermediate between Hernaria and Pollichia: Orilliocebraceæ.

**CERVO**, *s.* The naked skin of a hawk's bill;—(cervo, Lat.) to wax.

**CERE**, se-re-al, *a.* (*Ceres*, the goddess of agriculture.) A term applied to those species of the Gramineæ, or grass plants, the seeds of which are used as food to man and beast, as wheat, oat, barley, and oats.

**CEREA**, se-re-a'le-a, *s.* Festivals celebrated by the Romans on the 19th of April, in honour of Ceres. The term was also used to denote all sorts of corn employed in the making of bread.

**CEREBELLITES**, ser-e-bel-li'tes, *s.* (*cerebelle*, Fr.) In pathology, inflammation of the cerebellum.

**CEREBELLUM**, ser-e-bel'lum, *s.* (Latin.) The little brain or brainlet situated under the occiput, or the posterior part of the head of vertebrate animals.

**CEREBRITES**, ser-e-bri'tes, *s.* Inflammation of the brain.

**CEREBRUM**, ser'e-bral, *a.* (*cerebrum*, the brain, Lat.) relating to the brain. In Anatomy, applied to the membranes, nerves, and blood-vessels which surround, supply, or emanate from the brain.

**CERIC ACID**, ser'e-brik as'sid, *s.* An acid,

## CEREBRUM—CERES.

extracted by ether from the matter of the brain, after it has been exposed to the action of boiling alcohol: when pure, it is white and crystalline.

**CEREBRUM**, ser'e-brum, *s.* (Latin.) The brain; applied sometimes to the whole of the pulpy mass which occupies the cranial cavity of vertebrate animals, sometimes to its anterior mass only.

**CERECLOTH**, sere'kloth, *s.* (from *cera*, wax, Lat. and *cloth*.) Cloth smeared with wax and other substances; applied by the ancients in wrapping round dead bodies, and also to wounds and bruises.

**CEREMENT**, sere'ment, *s.* The waxed cloth in which dead bodies were wrapped.

Let me not burst in ignorance, but tell  
Why thy canonized bones, hearsed in earth,  
Have burst their cerements.—*Shaks.*

**CEREMONIAL**, ser-e-mo'ne-al, *a.* (French.) Relating to ceremony, or outward rite; formal; observant of recognized usages; ritual; precise or punctilious in manners;—*s.* prescriptive formality; outward form or rite; a system of rules regulating the civilities and courtesies to be exchanged with persons, or the mode of reception enjoined on princes and ambassadors in treating with each other. The term is also used to denote the laws and regulations given by Moses relating to the worship of the Jews, termed the *Ceremonial Law*.

**CEREMONIALLY**, ser-e-mo'ne-al-le, *ad.* In a formal or ceremonial manner.

**CEREMONIALNESS**, ser-e-mo'ne-al-nes, *s.* The quality of being ceremonial; ceremoniousness.

**CEREMONIOUS**, ser-e-mo'ne-us, *a.* Consisting of outward ceremony, or rites and observances; full of ritual and impressive ceremonies; attentive to outward rites or prescriptive usages; civil; according to the strict rules of courtesy; formally respectful; rigidly observant of the rules of civility.

**CEREMONIOUSLY**, ser-e-mo'ne-us-le, *ad.* In a ceremonious manner; formally; respectfully.

**CEREMONIOUSNESS**, ser-e-mo'ne-us-nes, *s.* Redundant or unnecessary ceremony; extreme formality.

**CEREMONY**, ser'e-mo-ne, *s.* (*ceremonia*, Lat. Span. and Ital. *ceremonie*, Fr.) Outward rite; external form of religion; forms of civility; outward forms of state.

What art thou idol ceremony?  
What kind of god art thou, that sufferest  
More of mortal grief than do thy worshippers?  
Art thou else but place, degree, and form?—*Shaks.*

**CEREOPSIS**, se-re-op'sis, *s.* (*keras*, a horn, and *opsis*, the countenance, Gr.) The Pigeon-goose, an Australian genus of the Anatidæ or Duck family.

**CEREPHASIA**, ser-e-fa'zia, *s.* A genus of Mollusca, furnished with a univalve cerithiform shell; outer lip thin, and dilated at the base; aperture small, and slightly emarginate, without any internal groove; inner lip thin: Subfamily, Melaninae.

**CERES**, se'res, *s.* In Mythology, the daughter of Saturn and Cybele, and goddess of agriculture. She is represented with ears of corn on her head, and holding in one hand a lighted torch, and in the other a poppy, which was sacred to her. She is also represented as a countrywoman mounted on an ox, carrying a basket on her left arm, and holding a hoe: sometimes she rides in a chariot drawn by winged dragons. Also, the name of

## CEREUS—CERITHINÆ.

## CERITHIUM—CERTHIANÆ.

the asteroid planet discovered by M. Piazzi in 1801.

**CEREUS**, se're-us, *s.* (*cereus*, pliant, Lat. from the nature of the shoots.) The Torch-thistle, an extensive genus of plants: Order, Cactaceæ;—*a.* waxen.

**CERICTIUS**, ser-ik'te-us, *s.* (*keras*, and *ichthys*, a fish, Gr.) A name given by Rafinesque to a sub-genus of sharks found on the coasts of Sicily, having the head furnished with two bony appendages in the form of horns: Family, Squalidæ.

**CERINE**, se'rîne, *s.* A substance composed of fine crystalline needles, deposited while cooling, when wax has been boiled in alcohol. There is also another substance which is insoluble in alcohol, obtained at the same time, termed *Ceraine*; both appear to have nearly the same composition, consisting, according to Damas, of 48 atoms of carbon, 50 of hydrogen, and 2 of oxygen.

**CERINE**, se'rîne, *s.* (termed also Allantite.) A brownish black mineral, found in East Greenland, generally massive, and rarely crystalized in four-sided prisms, variously terminated. It consists, according to Dr. Thomson, of silica, 35.4; protoxide of cerium, 29.9; oxide of iron, 25.4; alumina, 4.1; lime, 9.2; sp. gr. 3.5—4.0.

**CERINTHE**, se-rin'the, *s.* (*keros*, wax, and *anthos*, a flower, Gr. from bees being supposed to be abundantly supplied with wax from this plant.) Honeywort, a genus of plants which yield much honey to bees from the juice of the corolla: natives of Italy and the South of Europe.

**CERINTHIANS**, se-rin'the-anz, *s.* A sect of heretics, contemporary with St. John, who is said to have refused to enter into a bath where Cerinthus, its founder, was present. Cerinthus believed in one supreme God, but that the world was not made by Him, but by angels; that Jesus was a man, the son of Joseph and Mary, (though Lardner doubts if he denied the immaculate conception); that at his baptism, *the Christ*, (the anointing,) meaning the power of the Holy Ghost, came upon him and enabled him to work miracles; that Jesus died and rose again, but that in his death *the Christ*, (i. e. the divine power,) being impassable, forsook and left him. His opinions, upon the whole, seem nearly to have harmonized with those of the Socinians, or modern Unitarians.

**CERIORNIS**, se-re-awr'nîs, *s.* (*keras*, and *ornis*, a bird, Gr.) A genus of birds of the Paponidæ or Pheasant family, having the head partly naked, with horny-like caruncles over the eyes, and the crown adorned with a pendant crest.

**CERITE**, se'rîte, *s.* Rhombohedral cerium ore, a mineral of a rose-red or clove-brown colour. It occurs massive, with a splintery fracture. It consists of oxide of cerium, 68.59; silica, 18.00; oxide of iron, 2.00; lime, 1.25; water and carbonic acid, 9.60; sp. gr. 4.7—5.0.

**CERITHIDEA**, ser-e-thid'e-a, *s.* A genus of Molluscs, with a light decollated shell; outer lip semicircular, and dilated by a flattened border; aperture emarginate: Family, Trochidæ.

**CERITHIFORM**, ser-ith'e-fawrm, *a.* Having a shape resembling that of the shell Cerithium.

**CERITHINÆ**, se-rith'e-ne, *s.* (*cerithium*, one of the genera.) The Club-shells, a subfamily of Mollusca, the shells of which resemble those of Cerithium, in having the spire very long, and the base either truncate or forming a short recurved channel.

296

**CERITHIUM**, se-rith'e-um, *s.* A genus of branchiate Gasteropods, having a univalve with a turriculated spire; an oval aperture short but well-marked canal, reflected to the backward; Family, Strombidæ; Subfamily, Cerithinæ.

**CERNUOUS**, ser'nu-us, *a.* (*cernuus*, Lat.) Tany, hanging down the head; drooping; lous; nodding.

**CEROCOMA**, se-ro-kom'a, *s.* (*keros*, wax, and head of hair, Gr.) A genus of Coleopteræ of a green or bluish-green colour; antennæ and feet of a wax yellow: Family, Trachelidæ.

**CEROGRAPHY**, se-ro-graf'e, *s.* (*keros*, wax, and *grapho*, I write, Gr.) Writing or painting with wax.

**CEROLITE**, se-ro-lite, *s.* Kerolite, a mineral occurring in kidney-shaped masses, which are laminar or compact structure, and a white, or green colour. It consists of silica, alumina, 12.18; magnesia, 16.02; water, sp. gr. 2.0—2.2.

**CEROMA**, se-ro'ma, *s.* An apartment in the baths, in which the bathers anointed themselves.

**CEROMANCY**, se-ro-man-se, *s.* (*keros*, and *μανία*, divination, Gr.) An ancient mode of divination by dropping melted wax in water.

**CEROON**, se-roon', *s.* A bale or package of wax. **CEROPEGIA**, se-ro-pe'je-a, *s.* (*keros*, wax, and *πηγή*, a fountain, Gr. in reference to the waxy masses of the flowers.) A genus of East Indian plants: Order, Asclepiadaceæ.

**CEROPHYTUM**, se-ro-fi'tum, *s.* (*keros*, and *φυτόν*, a plant, Gr.) A genus of Coleopterous insects: Family, Cericornes.

**CEROSINE**, se'ro-sine, *s.* A waxlike substance produced on the surface of certain species of sugar-cane.

**CEROTE**, se'rote, *s.* Cerate.—Obsolete.

**CERIAL**, ser'ro-al, *a.* Pertaining to the tree Cer. A numerous troop, and all their heads around a tree. With chaplets green of cerrial oak were bound.

**CERRUS**, ser'rus, *s.* The Latin name of a tree the bitter oak.

**CERTAIN**, ser'tane, *a.* (*certus*, Lat.) Sure; certain; unquestionable; undoubted; not to be doubted or denied; resolved; determined; unhesitating; put past doubt; unfailing; constant; settled; stated. In an indefinite sense, as *that certain person told me.*

**CERTAINLY**, ser'tane-le, *ad.* Indubitably; certainly; without fail.

**CERTAINNESS**, ser'tane-nes, *s.* Exemption from doubt or failure.

**CERTAINTY**, ser'tane-te, *s.* Doubt or failure which is real; settled state.

**CERTES**, ser'tes, *ad.* (French.) Certainly; indeed; truly.—An old word.

*Certes* these are the people of the island.—Shakespeare.

**CERTHIA**, ser'the-a, *s.* (*keras*, a horn, Gr. from the horny-pointed tail.) A genus of birds, of the order Certhiidae, or Creepers. The *milliaris*, Nut-hatch, or common creeper: British species.

**CERTHIADÆ**, ser'thi-a'de, *s.* (*Certhia*, one of the genera.) The Creepers, a family of birds, of the order Certhiidae, distinguished by Swainson between the Barbuts and the Tinnies.

**CERTHIANÆ**, ser'the-a'ne, *s.* The Typical-creepers, a subfamily of the Certhiidae, distinguished by Swainson by their tail ending in sharp and horny points.

**CERTIFICATE**, ser-ti'f'e-kate, *s.* (*certificat*, Fr.) A copy given in writing to declare or certify the fact of anything. In Law, a writing made in court, to give notice to another court of any done therein. In the bankrupt law of England and Ireland, a testimonial on the part of a proportion of the creditors, that the bankrupt has surrendered and conformed himself to the law, as to give a certificate to another.

**CERTIFICATION**, ser-te'fo-ka'shun, *s.* The act of certifying; also, an ascertaining of a thing.

**CERTIFIER**, ser-te'fi-ur, *a.* A person who certifies or certifies.

**CERTIFY**, ser'te-fi, *v. a.* To give certain information; to testify or declare in writing; to allege a knowledge of the circumstances.

**CERTIFICATE**, ser-sho-ra'ti, *s.* An original writ, issued out of the Court of Chancery or the King's Bench, directed to the inferior courts, commanding them to certify or to return the records of a cause pending before them, to the end the party may have the more sure and speedy justice before the court or such justices as he shall assign to determine the cause.

**CERTITUDE**, ser'te-tude, *s.* (*certitudo*, Lat.) Certainty; freedom from doubt.

**CERULE**, ser'ule, *a.* (*caeruleus*, Lat.) Blue.—Ob-

The bark.

That silently adown the cerule stream  
Glees with white sails.—*Dyer.*

**CERULEAN**, se-ru'le-an, *a.* (*caeruleus*, Lat.) Blue;

**CERULEOUS**, se-ru'le-us, *a.* sky-coloured.

**CERULEOUS**, se-ru'le-us, *a.* Having the quality of

being a blue or sky colour.

**CERUMEN**, ser'u-men, *s.* The wax of the ear.

**CERUSE**, se-ru'se, *s.* (*cerusa*, Lat.) A name given

to whitelead, or carbonate of lead.

This article of commerce is pre-

pared from the subacetate of protoxide of lead, by

the action of carbonic acid, on exposing metallic

in minute division, to air and moisture; and

by the action of the vapour of vinegar on thin

plates of lead, by which the metal is both oxidized

and converted into a carbonate.

**CERUSE**, se-ru'se, *a.* Washed with a preparation

of whitelead.

**CERVICAL**, se-ve'kal, *a.* (*cervix*, the neck, Lat.)

Relating to the neck. In Anatomy, applied to

bones, ligaments, blood-vessels, glands, &c.,

situated in the region of the neck.

**CESPITIOUS**, ses-pe-tish'us, *a.* (*cespes*, a turf,

**CEPES**, ses-pe-tus, *s.* Lat.) Relating to

resembling turf; made of turf.

**CEPE**, ses-pe-toze, *a.* In Botany, a plant is

called which produces many stems from one

root as to resemble a turf.

**CENS**, se, *a.* (probably corrupted from *cense*, or

from the old French *cons*.) A levy or

made upon the inhabitants of a place, accord-

ing to their property; a tax. The term seems to

have been used by Shakspeare for bounds or limits;

as *the jade is wrung in the withers out of all cens*.

*a.* to rate.

**CESSE**, ses-sa'shun, *s.* (*cesso*, I cease, Lat.) A

cessation or suspension; vacation; a rest; final

or end of motion or action; intermission

of business.

**CESSE**, ses-sa'vit, *s.* In Law, a writ to recover

when a tenant has ceased or neglected to

perform the stipulated services on which he holds his tenure, or when a religious house, holding land on the same conditions, failed to perform the spiritual obligations enjoined, as reading prayers, or giving alms. In both cases, if the neglect had been continued for two years, the parties could be dispossessed of the land by a writ of cessavit.

**CESSER**, ses'sur, *s.* A law term for ceasing, giving over, or departing from.

**CESSIBILITY**, ses-e-bil'i-te, *s.* (*cesso*, I cease, Lat.)

The act of ceasing or giving way.

**CESSIBLE**, ses'se-bl, *a.* Yielding without resist-

ance; liable to give way; giving way easily.

**CESSIO BONORUM**, sesh'she-o bo-no'rum, *s.* In

Scotland, it is the process by which the effects

of an insolvent debtor, who does not come under

the system of sequestration applicable to traders,

is divided among his creditors. By the law as it

formerly stood, the debtor applying for the benefit

of cessio must have been a month in jail; but as

the law now stands, any debtor imprisoned, or

against whom a writ of imprisonment for a civil

debt is available, may apply.

**CESSION**, sesh'shun, *s.* The act of surrendering, or

yielding up to a creditor, the goods, property, &c.,

of a debtor; a yielding or giving way to another.

In Ecclesiastical Law, when a person accepts a

second benefice or dignity in the church, which is

incompatible by law with that which he previously

held, the latter is said to be void by cession.

**CESSIONARY**, sesh'shun-a-re, *a.* Having delivered

up, or surrendered effects.

**CESSMENT**, ses'sment, *s.* An assessment or tax.—

Obsolete.

**CESSOR**, ses'sur, *s.* (*cesso*, Lat.) In Law, a person

who neglects or ceases to implement the stipu-

lated service by which his land is held, thereby

incurring the penalty awarded by the writ of ces-

savit.

**CESSPOOL**, ses'pool, *s.* A well sunk under the

mouth of a drain to receive the sedi-

ment which might choke up its passage.

**CEST**, sest, *s.* A lady's girdle.

**CESTOIDEA**, ses-to-id'e-a, *s.* (*kestos*, a ceinture, and

*eidos*, Gr.) A family of intestinal worms, inha-

biting the abdomen of certain birds and fishes;

the body is long, flat, and ribbon-like. The family

consists of a single genus, *Ligula*.

**CESTRACION**, ses-tra'shun, *s.* (*kestron*, a dart, Gr.)

A genus of Cartilaginous fishes belonging to the

Squalidae, or Shark family, having two dorsal fins,

each furnished with a sharp spine in front; the

ventral fin between the two dorsals; caudal fin

unequally forked.

**CESTRINEÆ**, ses-trin'e-e, *s.* (*cestrum*, one of the

genera.) A tribe of plants of the order Solanaceæ,

in which the limb of the corolla is plicate, valvate,

or induplicate in æstivation; calyx five-toothed;

corolla funnel-shaped, five-lobed, and regular;

stamens five; anthers dehiscing lengthways; ova-

rium seated on a cupulate disk; pericarp capsular,

or baccate.

**CESTRUM**, ses'trum, *s.* (*kestron*, the Greek name of

betony.) Bastard jasmine, of the order Solana-

cæ: Tribe, Cestrineæ.

**CESTUM**, ses'tum, *s.* (*kestos*, a ceinture, Gr.) A

genus of Acalepha, consisting of gelatinous ribbon-

like animals several feet in length: Tribe, Sim-

plicia.

**CESTUS**, ses'tus, *s.* (Latin.) The girdle of Venus,

or marriage girdle which decorated the bride, among the ancient Greeks and Romans, on the occasion of her nuptials; also, a kind of glove or gauntlet used by the athletes of Greece in their games.

**CESURA.**—See *Cæsura*.

**CETACEA**, se-ta'she-a, *s.* (*ketos*, a whale, Gr.) An order of Mammiferous animals which have no hind feet; their trunk is continued by a thick tail, terminating in a horizontal cartilaginous fin, and their head united to the trunk by a neck so short and thick, that no diminution of its diameter can be perceived, and composed of very slender cervical vertebrae, which are partly anchylosed or soldered together. They have the form of fishes, with the exception of the horizontal tail, an instrument useful in enabling them to rise speedily to the surface of the water to breathe, which they are frequently compelled to do, as they breathe with lungs. Their blood is warm; they are viviparous, and suckle their young. They are divided into the *C. herbivora* and the *C. ordinaria*, the first composed of the manati or lamantins, the halibore or dudongs, and stellerus; the latter, of the whales, dolphins, narwhals, porpoises, and cachalots.

**CETACEOUS**, se-ta'shus, *a.* (*cetaceus*, Lat.) Of the whale kind; relating to the whale.

**CETENE**, se'tene, *s.* An oily colourless liquid obtained by distilling ethal repeatedly with glacial phosphoric acid; it is soluble in alcohol and ether, but not in water. It consists of 32 atoms of carbon, and 32 of hydrogen.

**CETIC**, se'tik, *a.* Pertaining to the whale.

**CETIOSAURUS**, se-te-o-saw'rus, *s.* (*ketos*, a whale, and *sauros*, a lizard, Gr.) A name given by Professor Owen to a genus of fossil Saurians found in the Oolitic formations.

**CETOLOGICAL**, set-o-lod'je-kal, *a.* (*ketos*, a whale, and *logos*, Gr.) Relating to cetology.

**CETOLOGIST**, set-to'lo-jist, *s.* A person who is versed in cetology.

**CETOLOGY**, se-to'lo-je, *s.* The natural history of cetaceous animals.

**lobular**, is a projection, so called from its similarity it bears to the globe itself. This is a conical projection, in which the parallels distant circles, having the pole for their centre, and the meridians curvilinear and so as all to meet in the pole, or common to the parallels.

**Terrestrial**, like the plain charts, has the earth represented by parallel right lines, and some of the parallels, or longitude, every equal to those at the equator, so that they are more and more above their natural way approach towards the pole; but then some of the meridians, or of latitude, are in the same proportion at the same part; the same proportion is preserved between them on the globe itself.

**Hydrographical**, are sheets of large paper, on several parts of the land and sea are laid, with their respective coasts, harbours, flats, rocks, shelves, sands, &c.; also the use of the compass, and the latitudes and longitudes of the places.

**Plain**, have the meridian as well as the degrees of latitude drawn parallel to each other, degrees of longitude and latitude every equal to those at the equator.

**Iconographic**, are particular descriptions of arances, spots, and maculae of the moon.

**Topographic**, are draughts of some small part of the earth, or of some particular place, regard to its relative situation, as London, &c.

**CHEIROGALEUS**, ke-ro-ga'le-us, *s.* (*cheir*, the hand, and *galeus*, a young weasel or kitten, Gr.) A genus of Quadrumana, belonging to the Lemur family.

**CHEIROLEPIS**, ke-rof'e-pis, *s.* (*cheir*, and *lepis*, a scale, Gr.) A genus of fossil fishes, found in the old red sandstone of Morayshire and the Orkney Islands.

**CHEIROLOGY**, ke-ro'l'o-je, *s.* (*cheir*, the hand, and *logos*, a discourse, Gr.) The mode of conversing with the fingers, practised generally by the deaf and dumb.

**CHEIROMYS**, ke-ro'mis, *s.* (*cheir*, a hand, and *mys*, a rat, Gr.) The Aye Aye of Madagascar, a remarkable animal, considered by Swainson as belonging to the Rodentia or Glires, though some naturalists have classed it among the Lemurs.

**CHEIRONEOTES**, ke-ro-nek'tes, *s.* (*cheir*, a hand, and *nechos*, I swim, Gr.) The Frog-fish, a genus of grotesque and hideously-shaped fishes, which have the pectoral fins supported like short feet on peduncles, by means of which they can creep over mud or sand when left dry by the receding tide; also, a name given by Illiger to a genus of Marsupialia, or opossums, in which the hinder legs are webbed.

**CHEIROPTER**, ke-ropt'ur, *s.* (*cheir*, the hand, and *pteron*, a wing, Gr.) A mammiferous animal, having the fingers elongated for the expansion of membranes which act as wings, as in the vesper-tilio or bat.

**CHEIROPTERA**, ke-ropt'e-ra, *s.* A family of Mammalia, belonging to the order Carnaria, the distinguishing character of which consists in a fold of the skin, which, commencing at the sides of the neck, extends between the fingers of the fore limbs, supports them in the air, and enables such of them to fly, as have their hands sufficiently developed for that purpose.

**CHEIROPTEROUS**, ke-ropt'e-rus, *a.* Belonging to the Cheiroptera; furnished with elongated fingers or toes for the expansion of membranes which serve as wings.

**CHEIROSTEMON**, ke-ro-ste'mon, *s.* (*cheir*, the hand, and *stemon*, a stamen, Gr. from the hand-like form of the anthers.) A genus of plants, consisting of a South American tree, one hundred feet high, and fifteen feet in diameter.

**CHEIROTHERIUM**, ke-ro-the're-um, *s.* (*cheir*, and *therion*, a wild beast, Gr.) The name given to an animal whose foot-prints, resembling those of a hand, are found impressed on new red sandstone on the Continent and in England. It is considered by Prof. Owen to have been a large Batrachian reptile, for which he proposes the name Labyrinthodon, from the peculiar labyrinthian structure of its teeth.

**CHEKAO**, tshek'a-o, *s.* A kind of paste prepared

by calcination and tirturation from a hard substance. The Chinese use the chekao in ing the elegant figures we see in the wholly China ware, which they afterwards varnish common way.

**CHELA**, ke'la, *s.* (*chele*, a claw, Gr.) A fishes belonging to the Salmon family, in the month is very small, and opens ver the anal fin long: Subfamily, Cyprinæ. name also of the first pair of forceps of the lobster, &c.: spelled also *chely*.

**CHELEDONIUM**, kel-e-do'ne-um, *s.* (*chēlō* swallow, Gr. from its being said that the flowers at the time the swallows arrive, as at their departure.) Celandine, a genus baceous plants, with smooth, brittle, tender and an acrid juice: Order, Papaveraceæ species are British, *C. lucinatum* and *gracile*.

**CHELERYTHRINE**, ke-le-rith'rine, *s.* A substance obtained in the form of a grey powder, from plants *Chelidonium majus* and *Glaucium* which powerfully excites sneezing. Acid a fine orange colour, and form with it neut which act as narcotics when taken in doses.

**CHELICERES**, kel'e-seerz, *s.* (*chele*, a claw, and a horn, Gr.) A name given by Latreille appendages on the heads of spiders and scorpions, which he considers as representing the metatarsi of the Decapod Crustaceans, but classed in these Arachnideans into organs for the of food.

**CHELIDONINE**, ke-le-do'nine, *s.* A substance covered by Godefroy in the plant *Chelidonium majus*, and *Glaucium luteum*. When exposed to the air, it forms colourless scales of a bitter taste, and consists of 40 atoms of carbon, 20 of hydrogen, and 3 of nitrogen.

**CHELIDRIÆ**, kel-id're-de, *s.* (*chelydra*, on genera.) The Crocodile Tortoises, a family of Chelonians, in which the tail is long, and is not retractile: Order, Chelonides.

**CHELIFER**, kel'e-fur, *s.* (*chele*, a claw, and *fero*, I bear, Lat.) A genus of Arachnids, Spiders, which have the appearance of scorpions without the tail.

**CHELIFEROUS**, ke-lif'e-rus, *a.* (*chele*, a claw, and *fero*, I bear, Lat.) Furnished with claws; armed with claws.

**CHELIFORM**, kel'e-fawm, *a.* (*chele*, a claw, and *forma*, form, Lat.) Having the form of a claw.

**CHELINOTUS**, kel-e-no'tus, *s.* (*chelys*, a shell, and *notos*, the back, Gr.) A genus of Mollusca, belonging to the Haliotidæ, or Ear-shells: cheliform; shell ear-shaped, thin, fragile, forate, and without a pillar, and entirely covered in the back of the animal.

**CHELMON**, kel'mon, *s.* (*cheiloma*, a lip, and *monos*, a single, Gr.) A genus of fishes, in which the mouth is prolonged into a slender snout or tube: Family, Cheloniidae.

**CHELMSFORDITE**, tshelms'ford-ite, *s.* (from Chelmsford in the United States, where it occurs associated with quartz, mica, and apatite.) A mineral, found amorphous and crystallized in angular prisms.

**CHELODINA**, ke-lo'de-na, *s.* A genus of the River Tortoises, in which the neck is very long: Order, Chelonides.

**CHELONARIUM**, ke-lo-na're-um, *s.* (*chelon*

## CHELONE—CHEMICAL.

## CHEMICALLY—CHEMISTRY.

tion, Gr.) A genus of Coleopterous insects: Family, Buprestidae.

**CHELONE**, ke-lo'ne, *s.* (*chelone*, a tortoise, Gr. from the back of the upper lip of the corolla being compared to a tortoise.) Tortoise-flower, a genus of plants: Order, Scrophulariaceae.

**CHELONIA**, ke-lo'ne-a, *s.* (*chelone*, a tortoise, Gr.) An order of **CHELONIDES**, ke-lo'ne-des, Reptiles, characterized by the body being enclosed between a double shield or shell, out of which the head, tail, and four extremities extend. Linnæus includes Chelonia in the genus Testuda; but the order is now divided into the following families, each containing two, three, or five genera:—the Chelidridæ, or Crocodile Tortoises; Testudinidæ, or Land Tortoises; Emydæ, or River Tortoises; Trionycidæ, or Soft Tortoises; and Chelonidæ, or Sea Turtles.

**CHELONIAN**, ke-lo'ne-an, *a.* A term applied to short concise expressions from Chilo, one of the seven sages of Greece, three of whose maxims were inscribed in golden letters in the temple of Delphi. They were, 'Know thyself,' 'Desire nothing too much,' and 'Misery is the certain companion of debt and strife.'

**CHELONIDE**, ke-lo'ne-de, *s.* (*chelonias*, one of the genera.) The Sea Turtles, a family of the order Chelonides, in which the feet are fin-shaped, and more adapted for swimming than any of the other water tortoises.

**CHELONITE**, ke-lo'ne-te, *s.* A name given to certain species of fossil Echini, of the genus Cidaris.

**CHELOSTOMA**, ke-lo's-to-ma, *s.* (*chela*, a claw, and *stoma*, a mouth, Gr.) A genus of Hymenopterous insects, belonging to the Dasygastræ, or Solitary Bees.

**CHELYDRA**, ke'le-dra, *s.* (*chelys*, a tortoise, and *draco*, I act, Gr.) A genus of Chelonians, in which the tail is long, with crests of scales: Type of the family Chelidridæ.

**CHELYS**, ke'lis, *s.* (*chelys*, a tortoise, Gr.) A genus of the Chelonians, in which the tail is short, the head and neck furnished with lobed appendages, and the nostrils long and tubular.

**CHEMICAL**, kem'e-kal, *a.* Relating to chemistry, or resulting from the operation of chemical agencies. *Chemical Symbols and Equivalents* are modes of expressing, by letters and figures, the definite proportions in which substances chemically combine with one another. These are given in the following table. The letters express the equivalent or atom of the substance it represents—the figures, the atomic weights in which they combine, hydrogen being taken as unity. When two or more equivalents of a substance are expressed, it is done by figures, either prefixed or affixed to the symbol; thus, C expresses one atom or equivalent of carbon, 2C or C<sup>2</sup>, two atoms—C + O<sup>3</sup> or CO<sup>3</sup>, one atom of carbon united to 3 of oxygen.

**CHIN**, tshin, *s.* (*cinn*, Sax.) The part of the face beneath the under lip.

**CHINA**, tshi'na, *s.* A name given to porcelain ware manufactured in China. The term is now applied to porcelain in general. *China-root*, a root of *Smilax china*, a Chinese plant, formerly used for the same purposes as sarsaparilla now is.

**CHINCHILLA**, tshin-tshil'la, *s.* A name given by Mr. Bennet to a small Rodent, a native of Chili, allied to and forming with *Lagotis* the family *Chinchillidae*. The species are nearly of the size and form of the rabbit.

**CHINCUGH**, tshin'kof, *s.* A name given sometimes to the Hooping-cough, or Pertussis.—Which see.

**CHINE**, tshine, *s.* (*china*, Ital.) The part of the back in which the vertebrae, or backbone, is situated; a piece of the back of an animal; a narrow precipitous ravine;—*v. a.* to divide into chines.

**CHINED**, tshinde, *a.* Relating to the back.

**CHINESE**, tshi-neze', *a.* Pertaining to China;—*s.* the language or natives of China. *Chinese cherry*, the *Cerasus Chinensis*.

**CHINGLE**, tshing'gl, *s.* Gravel free from dirt.

**CHINK**, tshink, *s.* (*cina*, *cyna*, Sax.) A small longitudinal aperture; a rent; an opening or gap between the parts of anything;—*v. n.* to crack; to open; to sound by bodies striking each other, —*v. a.* to jingle like money.

**CHINKY**, tshing'k'e, *a.* Full of holes; gaping; opening into narrow clefts.

**CHINOILINE**, tshin-oy'line, *s.* An oily liquid obtained when quinine is distilled with potash and a little water. It unites with acids, neutralizing them, and forming crystallizable salts.

**CHINTZ**, tshintz, *s.* (*size*, Germ. *chite*, Span. *chint*, Fr.) A peculiar style of fast printed calico, in which figures of at least five different colours are impressed upon a white or light-coloured ground.

**CHIOCOCCA**, ki-o-kok'ka, *s.* (*chion*, snow, and *kokos*, a berry.) The Snow-berry, a genus of shrubs: Order, Rubiaceæ.

**CHIONANTHUS**, ki-o-nan'thus, *s.* (*chion*, snow, and *anthos*, a flower, Gr. in reference to the snow-white flowers of the species.) A genus of trees, one of the species of which, *C. virginica*, a native of North America, is called the snowdrop-tree, and also the fringe-tree; the former name from its long bunches of white flowers, and the latter from the corolla being cut into narrow segments.

**CHIONE**, ki-o'ne, *s.* (after *Chione*, the daughter of Deucalion, or from *chioneos*, white as snow, Gr. in reference to its cymes of white flowers.) A genus of plants, consisting of the tree *Chione glabra*, a native of Tortoise Island.

**CHIONEA**, ki-o'ne-a, *s.* (*chioneos*, snowy, Gr.) A small Dipterous Insect, found in winter in snow and ice: Subfamily, Panorpinæ.

**CHIONIS**, ki-o'nis, *s.* A genus of birds belonging to the Columbidae, or Pigeon family.

**CHIOPPINE**, tshop'pin, *s.* (from *chapin*, Span.) A high shoe, formerly worn by ladies.

Your ladyship is nearer heaven than when I saw you last, by the altitude of a *chioppine*.—*Shaks.*

**CHIP**, tship, *v. a.* (derivation uncertain.) To cut into small pieces; to diminish by cutting away a little at a time;—*v. n.* to break or crack;—*s.* a small piece taken off by a cutting instrument; a small piece cut or broke from a larger piece. *Chip-axe*, a one-handed plane axe, used by carpenters in hewing timber.

**CHIPPING**, tship'ping, *s.* The operation of cutting away small irregular pieces from a block of stone or a brick, to hew it into a required form; also, taking off, by means of chisels, the outer rind or coat of cast-iron, previous to smoothing the surface by files. *Chipping-pieces*, the projecting pieces of iron cast on the facings of iron-framing, when intended to be rested against each other.

**CHIRAGRA**, ki-rag'ra, *s.* (*cheir*, the hand, and *agra*, seizure, Gr.) Gout in the joints of the fingers.

**CHIRATA**, tshi-ra'ta, *s.* (from the vernacular name of one of the species.) A genus of plants, consisting of perennial hairy herbs, natives of Nepal, with large red or purple flowers: Order, Geraniaceæ.

**CHIRIDÆ**, ki're-de, *s.* (*chirus*, one of the genera.) A family of Acanthopterygious fishes, with compressed perch-like bodies, having several lateral lines formed of a series of pores on the sides. It consists of the genus *Chirus*, in which the head is crested, as in *Blennius*; the ventral fins distinct, with five rays: Tribe, *Blennidæ*.

**CHIROCENTRUS**, ki-ro-sen'trus, *s.* (*cheir*, and *ken-tron*, a spine, Gr.) A genus of fishes belonging to the Clupinæ, or Herrings, so named from the large pectoral fin being furnished with a lanceolet process.

**CHIROCERA**, ki-ro's'e-ra, *s.* (*cheir*, and *keras*, a horn,

Gr.) A genus of Hymenopterous insects to the Wasps, one species of which, *C.* or *Vestra minuta*, is very common on the stems of umbelliferous plants.

**CHIROGRAPH**, ki'-ro-graf, *s.* (*cheir*, the hand, and *grapho*, I write, Gr.) A deed, or other instrument in writing, which anciently was attested by the subscription and crosses of witnesses, answered to what is now termed a charter; also a fine, so called from the manner of settling.

**CHIROGRAPHER**, ki-rog'gra-fur, *s.* One who practices or professes the art or business of writing as an officer in the Court of Common Pleas, or who grosses fines.

**CHIROGRAPHIC**, ki-ro-graf'fik, *a.* } relating to  
**CHIROGRAPHICAL**, ki-ro-graf'fe-kal, } to graphy.

**CHIROGRAPHY**, ki-rog'graf-fe, *s.* The art or practice of writing.

**CHIROLOGICAL**, kir-o-led'je-kal, *a.* (*cheir*, hand, and *logos*, a discourse Gr.) Relating to chirolology.

**CHIROLOGIST**, ki-ro'l'o-jist, *s.* One who communicates ideas by signs made with the hands and fingers.

**CHIROLOGY**, ki-ro'l'o-je, *s.* The art of communicating or interchanging thoughts with the dumb, by means of certain signs made with the hands and fingers.

**CHIROLOPHIS**, ki-ro'l'o-fis, *s.* A genus of fishes with anguilliform bodies and crested heads: Family, *Blennidæ*.

**CHIROMANCER**, ki'-ro-man-sur, *s.* (*cheir*, hand, and *teia*, divination, Gr.) One who pretends to tell future events, or the fortunes of persons by inspecting the hand.

The middle sort, who have not much to spare, To *chiromancers* cheaper art repair, Who clasp the pretty palm, to make the lines appear.

**CHIROMANCY**, ki'-ro-man-se, *s.* (*cheir*, hand, and *teia*, divination, Gr.) The pretended art of ascertaining fortunes and future events by the inspection of the hands: termed also *palmistry*.

**CHIROMANIST**, ki'-ro-man-ist, *s.* The art of ascertaining fortunes by the hands: Which is termed *CHIROMANTIST*, ki'-ro-man-tist, *s.* *CHIROSOPHIST*, ki'-ro-so-fist, *s.* Which is termed *CHIROMANTIC*, ki-ro-man'tik, *a.* Relating to chiromancy.

**CHIROMOMUS**, ki-ro-mo'mus, *s.* (*cheir*, hand, and *mos*, pastoral, Gr.) A genus of Dipterous insects allied to *Tipula*.

**CHIROMYZA**, ki-ro-mi'za, *s.* A genus of Dipterous insects: Family, *Notacantha*.

**CHIRON**, ki'-run, *s.* (*cheir*, the paw or hand, and *ron*, a tribe, Gr.) A genus of Coleopterous insects: Tribe, *Scaphitæ*.

**CHIRONECTES**, ki-ro-nek'tes, *s.* (*cheir*, hand, and *nectes*, swimming, Gr.) Frog-fish, a genus of fishes, in which the body is naked, sometimes tuberculated; the mouth ventral; generally furnished with detached rays like processes; the pectoral fins pedunculate, capable of being used as feet. The genus includes the family *Chironectidæ*.

**CHIRONIA**, ki-ro'ne-a, *s.* (from the centaur *Chiron*, Gr.) A genus of plants, natives of the Cape of Good Hope: Order, *Gentianaceæ*.

**CHIRONOMY**, ki-ron'o-me, *s.* (*cheir*, hand, and *nomos*, a law, Gr.) The science which treats of gestural action and pantomime.

## CHIROPEDIST—CHITON.

**CHIROPEDEST**, ki-rop'e-dist, *s.* (*cheir*, and *pous*, a Gr.) One who extracts corns.

**STOMA**, ki-ros'to-ma, *s.* (*cheir*, and *stoma*, a h, Gr.) A genus of fishes with oblong bodies, the mouth horizontal and the head pointed: *ly*, Zeidae.

**OTIS**, ki-ro'tes, *s.* (*cheir*, and *ota*, ears, Gr.) One of Saurian reptiles belonging to the family Iridæ, having two short fore feet divided into toes; scales verticillated, and the head oblique; the eyes small, and the tympanum of the head closed.

**CHITUP**, v. n. (*zirpen*, Germ.) To make a like certain small birds or insects;—*v. a.* to cheer up.—In this sense, it is probably copied from *cheer up*.

Balaam now, he lives like other folks; takes his chirping pint, he cracks his jokes.—*Pope*.

the voice of birds or insects.

**CHIRP**, tsher'pur, *s.* One that chirps; one who chirps.

**CHIRP**, tsher'ping, *s.* The gentle noise of birds. *chirp*.—See *Churme*.

**CHIRGEON**, ki-rur'je-un, *s.* (*cheir*, and *ergon*, Gr.) A surgeon.—Obsolete.

**CHIRURGY**, ki-rur'je-re, *s.* (*cheir*, the hand, and *work*, Gr.) Surgery, or that department of medical science in which the hand, either alone or with instruments, is employed for the prevention or cure of diseases. *Surgery* is the term now

**CHIRURGICAL**, ki-rur'jik, } *a.* Surgical.—**CHIRURGICAL**, ki-rur'je-kal, } *s.* *chirur*.—See *Chiridae*.

**CHIRIDÆ**, ki-ze'ris, *s.* A genus of birds, belonging to the family Musophagidæ, or Plantain-eaters. *chirid*, *s.* (*cisean*, Fr.) An instrument used in masonry, carpentry, and joinery; and also in stonemasonry, and numerous other artificers, using either by the impulse of pressure, or by blows of a mallet or hammer;—*v. a.* to cut a chisel.

**CHISLEV**, tshis'lé, *s.* (*chislev*, Heb. *chaselev*, Gr. sec. i. 54.) The third month of the civil, or fifth month of the Jewish ecclesiastical year, beginning with the new moon of our December.

**CHIRANCHIATA**, kis-mo-brang-ke-a'ta, *s.* *chir*, a slit, from *shazo*, I cut, and *bragghia*, *chir*, gills of a fish, Gr.) A name given by Linnaeus to the second order of his class Parachelone, comprehending such species as have branchiæ communicating from behind by a slit or cavity.

**CHIRIUM**, kis-mop'ne-e, *s.* (*chisme*, a slit, and *respire*, Gr.) A name given by Dumeril to the order of Cartilaginous fishes, comprehending those whose branchiæ are without opercula, but covered by a membrane pierced by an opening on each side of the neck.

**CHIT**, tshit, *s.* (*chit*, Sax.) A sprout; a shoot of from the end of the grain; an instrument for cleaving laths; a familiar term for a child; a freckle—seldom used in the last sense; *chit*, to sprout; to shoot as a plant.

**CHIT**, tshit'tshat, *s.* Prattle; familiar or noisy talk.

**CHITON**, ki'ton, *s.* (*chiton*, a coat of mail, Gr.) A genus of Mollusca, the shells of which are boat-shaped, and consist of a series of symmetrical

## CHITONELLUS—CHLAMYPHORUS.

plates folding over each other, and implanted in the mantle or zone of the animal: Tribe, Cyclobranchia.

**CHITONELLUS**, ki-to-nel'lus, *s.* (dim. of *Chiton*.) A genus of Cyclobranchia, in which the body is larvaform; the plates small and detached; mantle naked; seeds with punctures resembling spiracles.

**CHITONIA**, ki-to'ne-a, *s.* (*chiton*, a coat, Gr. the seeds being covered with arillus.) A genus of Mexican trees: Order, Zygophyllaceæ.

**CHITTER**, tshit'tur, v. n. (*cittern*, Dut.) To shiver or tremble with cold.

**CHITTERLING**, tshit'tur-ling, *s.* The frill to the breast of a shirt.—Obsolete.

**CHITTERLINGS**, tshit'tur-lingz, *s. pl.* (*schysterlingh*, Dut.) The entrails of an animal.

**CHITTY**, tshit'te, *a.* Childish; like a babe.

**CHIVALRIC**, tshiv'al-rik, } *a.* Relating to chivalry; knightly; gallant; warlike; adventurous.

**CHIVALRY**, tshiv'al-re, *s.* (*chevalerie*, Fr.) The duties and privileges of a knight. Chivalry took its birth in the middle ages, in the interior of the feudal mansions, without any set purpose beyond that of declaring—first, the admission of the young man to the rank and occupation of a warrior; secondly, the tie which bound him to his feudal superior, his lord, who conferred upon him the arms of knighthood. The ceremonies attending the creation of a knight were religious and moral, and bound the chevalier to be brave, bold, and loyal; hence the high moral tone imputed to their sentiments, and their devotion to the fair sex. In Law, a tenure of land by knight's service, which required the tenant to take the field at the call of the sovereign.

**CHIVES**, tshives, *s.* A name given by former botanists to the filaments of flowers; the name also of a small species of Allium, the bulbs of which have the odour of garlic, and are used in soups and stews, but are little cultivated.

**CHLÉNACEÆ**, } kle-na'se-e, *s.* (*chlène*, a cloak, Gr. **CHLÉNACEÆ**, } from the flowers being furnished with an involucre.) A natural order of handsome trees or shrubs, with fine, showy, red, regular, unsymmetrical flowers, in a permanent crust-shaped involucre, with monodelphous stamens; leaves alternate, feather-shaped, and entire; styles and carpels combined round a long-beaked torus. They are curious plants, presenting the singular properties of three in the calyx, five in the corolla, and three in the ovary; and having the flowers enclosed in a five-toothed involucre. They are contained in Lindley's Geraniaceæ alliance, and placed after Balsaminaceæ. They are all natives of Madagascar.

**CHLÉNUS**, kle'ne-us, *s.* A genus of Coleopterous insects, of elegant forms, and generally adorned with hues of green. The legs and antennæ of many of the species are of a pale-yellow colour, as also the outer margin of the elytra.

**CHLAMYDOSAUROS**, kla-me-do-saw'rus, *s.* (*chlamys*, and *sauros*, a lizard, Gr.) A genus of Saurians, in which the neck is furnished on each side by a large plaited frill, like a short cloak, rising from the hinder part of the ear. The colour is yellowish-brown, variegated with black; from the snout to the tip of the tail is nearly two feet.

**CHLAMYPHORUS**, kla-mif'o-rus, *s.* (*chlamys*, a coat-of-mail, and *phoreo*, I bear, Gr.) An animal

# CHLORIDIC—CHLORIS.

somewhat allied in its habits and anatomical structure to the mole. Its total length is nearly six inches. It carries on its back a shell strong and inflexible, like sole-leather, composed of a series of plates of a square, rhomboidal, or cubical form; the rows include from fifteen to twenty plates; the shell extends nearly half round the body, and is broadest behind.

**CHLAMYS**, kla'mis, *s.* (*chlamys*, a coat, Gr. from the scabrous covering of the body.) A genus of Coleopterous insects: Family, Cyclica.

**CHLEDANTHUS**, kle-dan'thus, *s.* (*chleios*, delicate, and *anthos*, a flower, Gr.) A genus of plants, with delicate and beautiful yellow flowers: Order, Amaryllidaceæ.

**CHLOEIA**, klo-e'ya, *s.* A genus of Annelides, in which the head is furnished with five tentacula, and the branchiæ resemble a tripinnate leaf: Order, Dorsibranchiata.

**CHLORAL**, klo'ral, *s.* A mobile oily liquid of a peculiar penetrating agreeable smell, obtained by the action of chlorine or alcohol. It consists of 4 atoms of carbon, 3 of chlorine, 1 of hydrogen, and 2 of oxygen.

**CHLORANILE**, klo'ra-nile, *s.* A substance obtained in pale yellow pearly scales, by the action of chlorine on a warm alcoholic solution of chlorisatine or bichlorisatine. It consists of 6 equivalents of carbon, 2 of oxygen, and 2 of chlorine. *Chloranilic acid*, an acid obtained from the chloranilate of potash, by the action of hydrochloric acid. Chloranile dissolves in ammonia with a blood-red colour, and the solution yields chestnut-brown crystals, called Chloranilamon; when this is dissolved in hot water, and mixed with hydrochloric acid, it yields small black crystalline needles, termed Chloranilam.

**CHLORANTHACEÆ**, klo-ran'tha'se-e, *s.* (*chloranthus*, one of the genera.) A genus of herbaceous plants, with an aromatic taste; stems jointed and tumid at the articulations; leaves opposite, simple, with sheathing petioles, and minute intervening stipules; flowers disposed in loose terminal spikes; fruit drupaceous, indehiscent; seed pendulous. The plants are natives of South America, tropical India, the West Indies, and the Society Islands. The order is placed by Lindley in his Pepperal alliance, between Pepperaceæ and Saururaceæ.

**CHLORANTHUS**, klo-ran'thus, *s.* (*chloros*, green, and *anthos*, a flower, Gr. the flowers being green.) The Chu-Lan of China and Japan, a genus of plants, with an aromatic and fragrant smell: Order, Chloranthaceæ.

**CHLORATE**, klo'rate, *s.* A salt resulting from a combination of chloric acid with a salifiable base.

**CHLOREA**, klo're-a, *s.* (*chloros*, green, Gr.) A genus of plants, one of the species of which, *C. discoides*, is fancied in Chili to promote the flow of the milk: Order, Orchidaceæ.

**CHLORETIC**, klo-ret'ik, *a.* Resembling chlorite; containing chlorine.

**CHLORIDE**, klo'ride, *s.* The name given to combinations of chlorine with simple bodies. *Chloride of lime*, or Bleaching-powder, a preparation used extensively in the process of bleaching, consisting, according to Dr. Thomson, of 3 atoms of chloride calcium, and 1 atom of chlorite of lime. That made at Messrs. Tennant's Works, Glasgow, according to the same authority, consists of hydrate of lime, 4.625; and chlorine, 4.5. Dr. Ure gives

an analysis of a bleaching-powder: chlorine lime, 39.9; water, 20.6. *Chloride of potash*, a very valuable compound prepared in various ways; that of Professor Jack is perhaps the most and economical. Chlorine gas is passed into a mixture of 1 lb. of caustic lime, and 1 lb. of ash, with 8 lbs. of water. The chloride of lime is the result, and readily separates in the liquid by crystallization from the chloride of calcium, which is very soluble in water.

**CHLORIDIC**, klo-rid'ik, *a.* Consisting of chloride. **CHLORIFORME**, klo're-for-me, *s.* A peculiar compound fluid, obtained by distilling a mixture of alcohol and a solution of chloride of lime, mixing the product with five or six times its volume of concentrated acid. Its formula is C<sub>2</sub> H<sub>2</sub>.

**CHLORINDATMIT**, klo-rin-dat'mit, *s.* An indigo-coloured compound, obtained when indigo is acted upon with water, is exposed to the action of chlorine at a low heat: when the whole is afterwards distilled, a white crystalline sublimate is obtained, which is a mixture of two compounds, called *chlorindatmic acid* and *chlorindoptic acid*.

**CHLORINE**, klo'rine, *s.* (*chloros*, Gr. from *chloros*, a yellowish-green colour.) An elementary substance, obtained in the gaseous state from potassium acted upon by sulphuric acid. It has an acrid taste, disagreeable odour, and is the most powerful of the gases. 100 cubic inches of chlorine, at 60° Fahr., weigh 77 grains; under a pressure of four atmospheres it becomes a liquid of a bright yellow colour; when exposed to a cold of 30°, yellow crystals are formed, which consist of 1 atom of chlorine and 10 of hydrogen. Chlorine has no acid property, but it destroys all animal and vegetable colours when it is present, which renders it extremely useful in the process of bleaching. The compounds of chlorine which are not acids, are termed chlorides or chlorures. *Hypochlorous acid* consists of 2 atoms of chlorine and 1 of oxygen. *Chlorous acid* consists of 2 atoms of chlorine and 4 of oxygen. *Chloric acid* consists of 2 atoms of chlorine and 5 of oxygen. *Perchloric acid*, of 2 atoms of chlorine and 7 of oxygen. *Chloronitrous gas*, a gas of a pale reddish colour, obtained when fused chloride of potassium, or calcium, in powder, is treated with strong nitric acid. It has an odour similar to that of chlorine, and possesses bleaching properties consisting of equal volumes of chlorine and of nitrogen.

**CHLORINISED**, klo'rin-izide, *a.* Compound with chlorine.

**CHLORIODIC ACID**, klo-re-od'ik as'id, *s.* A compound of chlorine and iodine, consisting of 1 equivalent of each. It is termed improperly, therefore, the chloride of iodine.

**CHLORION**, klo're-on, *s.* A genus of Hyemopterous insects: Section, Fossorers.

**CHLORIS**, klo'ris, *s.* (*chloros*, green, Gr. from *chloros*, green colour of its herbage.) A genus of pretty grasses, type of the family Chlorideæ. The flowers are one-sided; calyx two-valved, or six-floreted, the one sessile and hermaphrodite, the other stalked and male; pappus with a beard; stamens, 3; styles, 2; seed, 1; In Ornithology, the Greenfinch or Greenfinch is called *Chloris*, or *Chloris*, a subgenus of the Fringillidæ, or Finch family. *Fringilla chloris* of some ornithologists.

CHLORISATIC—CHLOROMETER.

**CHLORISATIC ACID**, klo-re-sa'tik as'sid, *s.* An acid obtained by the action of caustic potash on chlorisatic. Its composition is the same as chlorisatic + 1 atom of water.

**CHLORISATINE**, klo-ris'a-tine, *s.* A chemical contained in transparent four-sided crystals of a yellowish colour and a bitter taste, when a solution of isatin is saturated with chlorine.

**CHLORISATIDE**, klo-ris'a-tide, *s.* A white or yellow powder deposited on cooling when chlorisatic is dissolved, with the aid of heat, in a solution of ammonia. It is sparingly soluble in water, and by heat is resolved into chlorisatic water, and a new compound appearing as a violet-coloured powder, termed Chlorisatide.

**CHLORISATINE**, klo-re-so'na, *s.* (*chloros*, green, and *body*, Gr. from their green plumage.) A species of the Myotherinae, or Ant-thrushes, described by Swainson from the Pitta of Tem-

**CHLORISATITE**, *s.* (*chloros*, green, Gr.) Prismatic (Mica), a mineral of various shades of greenish-grey; also, pure white and translucent. It yields to the nail. It is compact, crystallized in flat six-sided prisms. There are varieties—the foliated, slaty, and greenish. It consists of silica, 62.0; magnesia, 27.0; iron, 3.5; alumina, 1.5; water, 6.0.

**CHLORISATITE**, *s.* (*chloros*, green, Gr.) A term used as a prefix to scientific words, in a lively green colour.

**CHLORISATATE**, klo-ro-as'e-tate, *s.* A combination of the chloroacetic and acetic acids with a base. The chloroacetates are those of ammonia, ethyle, potash, and silver.

**CHLORISATIC ACID**, klo-ro-a-set'ik as'sid, *s.* An acid obtained by hydrated acetic acid (vinegar) exposed to the combined action of chlorine and the rays of the sun, and other manipulations. It is a compound of 4 atoms of carbon, 8 of oxygen + 1 of water.

**CHLORISIDE**, klo-ro-ben'zide, *s.* A colourless solid, obtained by the distillation of chloride of iron with an alkali.

**CHLORISATIC ACID GAS**, klo-ro-kar-bon'ik as'sid, *s.* A gas made by exposing a mixture of measures of dry chlorine and carbonic acid to sunshine, when a rapid combination takes place and they contract to half their volume.

**CHLORISATIDE**, klo-ro-sin'noze, *s.* A compound obtained by the action of chlorine or the oil of vitriol. When pure, it exists in the state of a colourless, acicular crystals. It consists of 1 equivalent of carbon, 4 of chlorine, 4 of oxygen, and 2 of oxygen.

**CHLORISAT-ALDEHYDE**, klo-ro-si'an-al'de-hide, *s.* A chemical crystallized compound, composed of 1 of aldehyde, (C<sup>4</sup> H<sup>4</sup> O<sup>2</sup>), 2 of chloride of iron, (2Cy + Cl<sub>2</sub>) and two of water,

**CHLORISATETER**, klo-rom'e-tur, *s.* (*chloros*, and *measure*, Gr.) An instrument used in the discolouring or bleaching powers of the lime, and thus ascertaining the relative value of samples of that important preparation.

CHLOROMYS—CHLOROSALICINE.

**CHLOROMYS**, klo-ro-mis, *s.* (*chloros*, yellow, and *mys*, a rat, Gr.) The Yellow Rat, or Agoutis, a genus of Rodents, having much the appearance of the rabbit and hare, which they very much resemble in their dispositions, and in the nature of their flesh. They are natives of the Antilles, and hot parts of America.

**CHLORONAPHTHALASE**, klo-ro-naf'tha-lase, *s.* When naphthaline is exposed to chlorine gas at the ordinary temperature, it absorbs the gas and yields a yellow oil, called hydrochlorate of chloronaphthalase = C<sup>20</sup>, H<sup>8</sup>, Cl<sup>4</sup>. When treated with potash it loses one equivalent of hydrogen, and one of chlorine, and is then chloronaphthalase = C<sup>20</sup>, H<sup>6</sup>, Cl<sup>2</sup>. Its other compounds, with their chemical formulæ, are—chloronaphthalise = C<sup>20</sup>, H<sup>5</sup>, Cl<sup>3</sup>; chloronaphthalose = C<sup>20</sup>, H<sup>4</sup>, Cl<sup>4</sup>.

**CHLORONAPHTHALOSIC**, klo-ro-naf'tha-lo'sik, *s.* Composed of a chlorinated compound, and naphthaline or naphthalosic acid.

**CHLOROPAL**, klo-ro'pal, *s.* (*chloros*, green, Gr. and *opal*.) A mineral found associated with opal in Hungary, which appears to be closely allied to the variety of chlorite called green earth. It is earthy and conchoidal. The latter consists of oxide of iron, 35.3; silica, 46.0; magnesia, 2.0; water, 18; and a trace of magnesia.

**CHLOROPHÆITE**, klo-ro-fe'ite, *s.* (*chloros*, green, and *phaino*, I appear, Gr. from its appearing green when newly broken.) A mineral which, when newly broken, is of a green colour, varying from the fine transparent yellow-green of olivine, which it somewhat resembles, to the dull muddy-green of steatite, to which it then has an equal similitude. It is found in amygdaloid and other trap rocks.

**CHLOROPHANE**, klo-ro-fane, *s.* (*chloros*, green, and *phaino*, I appear, Gr.) A name given to certain varieties of fluor spar, which, when exposed to heat, exhibits the phenomena of phosphorescence in peculiarly bright green colours.

**CHLOROPHYLE**, klo-ro-fil, *s.* (*chloros*, green, and *phyllon*, a leaf, Gr.) A name given by Berzilius to the green colouring matter found in the leaves, stalks, unripe fruit, and juice of all except the very lowest of plants, such as algae, mosses, &c. When extracted by ether, and purified by the successive action of alcohol and hydrochloric acid, from which last solvent it is precipitated by water, it forms a dark green mass, the powder of which is of a grass-green colour. Its composition is unknown, but it is considered as intermediate between fat or wax and the resins.

**CHLOROPHYTUM**, klo-rof'e-tum, *s.* (*chloros*, green, and *phyton*, a plant, Gr.) A genus of African plants with inconspicuous flowers: Order, Liliaceæ.

**CHLOROPROTEIC ACID**, klo-ro-prot'e-ik as'sid, *s.* A name given by Müller to the white flocks which are deposited when chlorine is passed through a solution containing proteine = C<sup>40</sup>, H<sup>31</sup>, N<sup>5</sup>, O<sup>12</sup>.

**CHLOROPSIS**, klo-rop'sis, *s.* (*chloros*, green, and *opsis*, appearance, Gr.) A genus of the Merulidæ, or Thrush family, in which the bill is long and hooked.

**CHLOROPYGIA**, klo-ro-pij'e-a, *s.* (*chloros*, and *pygchos*, a beak, Gr.) A genus of birds belonging to the family Meropidæ, or Bee-eaters, natives of Madagascar.

**CHLOROSA**, klo-ro'sa, *s.* (*chloros*, green, Gr.) A genus of plants: Order, Orchidaceæ.

**CHLOROSALICINE**, klo-ro-sal'e-sin, *s.* A crystalline

yellow powder, deposited when chlorine gas is made to pass through a solution of salicine in water. Its formula is  $C^{42}, H^{25}, Cl^4, O^{22}$ .

**CHLOROSALICULIC ACID**, klo-ro-sa-lik'u-lik as'sid, *s.* An acid obtained in the form of yellow oblique rhombic crystals of a pearly lustre, and peculiar aromatic odour, by the action of chlorine gas on anhydrous saliculous acid.

**CHLOROSALICYMIDE**, klo-ro-sa-lis'e-mide, } *s.* A  
**CHLOROSAMIDE**, klo-ro-s'a-mide, } com-  
pound obtained by causing chloride of salicicle to absorb dry ammoniacal gas. The result is a yellow mass, which, when dissolved in boiling ether, separates on cooling in iridescent crystals of a yellow colour. Its formula is  $C^{42}, H^{15}, N^2, O^6, Cl^3$ .

**CHLOROSIS**, klo-ro'sis, *s.* (*chloros*, green, Gr.) The disease green-sickness, incident to females, and indicated by a pale or greenish colour of the skin.

**CHLOROSTOMA**, klo-ro's'to-ma, *s.* (*chloros*, and *stoma*, a mouth, Gr.)
